Donald Trump will win Wisconsin easily in November, if our election is verifiable.

By John Nolte

But as On Wisconsin Outdoors (OWO) has been reporting since November of 2023, our elections are not verifiable because the Wisconsin Elections Commission (WEC) has an estimated 4 million ineligible voters on its statewide registration list.

The 4 million ineligible voters are the source of unverifiable, illegally cast ballots in Wisconsin, commonly known as fraud.

It's important to understand that just a few dishonest people with access to the WEC's list, can deny the will of all Wisconsin voters. They simply use the names on the list to cast fraudulent ballots.

Robin Vos, Devin LeMahieu, and the Republicans who control Wisconsin's Assembly and Senate are directly responsible for allowing this to continue.

OWO notified the Republicans about the problem on November 6, 2023, and again on December 1, 2023.

As the lawmakers of our state with

Who is directing the war on agriculture and nutrition?

Government agencies, billionaires and pressure groups put world's poor, hungry families last

By Paul Dreissen

Elite billionaire organizations and foundations, government agencies and activist pressure groups are funding and coordinating a global war on modern agriculture, nutrition, and Earth's poorest, hungriest people. Instead of helping more families get nutritious food, better healthcare and higher living standards, they're doing the opposite, and harming biodiversity in the process.

The World Economic Forum wants to reimagine, reinvent and transform the global food system, to eliminate greenhouse gases from food production. Central to its plan is alternatives to animal protein: meal worm potato chips, bug burgers instead of beef patties, and meat loaves and

Acting Secret Service Chief 'Retaliated Against' Agents Who Had Security Concerns At Trump Event, Whistleblower Claims

By M. Lance

A whistleblower alleged that Secret Service acting Director Ronald Rowe personally cut security resources and "retaliated" against agents with security concerns leading up to former President Donald Trump's rally on July 13, according to a letter released Thursday.

The whistleblower alleged that Rowe personally implemented "significant cuts" to the Counter Surveillance Division (CSD), which does advanced threat assessments for venues, and alleged that agents who expressed security concerns were "retaliated against," according to Missouri Republican Sen. Josh Hawley's letter to Rowe. As a result, the CSD failed to perform its "typical evaluation" of the rally venue in Butler County, Pennsylvania, and

Wisconsin's Corrupt GOP Speaker Robin Vos Connected to Dark Money Group Attacking Conservative GOP Candidates in Upcoming Primary

By Joe Hoft

Wisconsin's GOP Speaker Robin Vos is connected to group using dark money against conservative GOP candidates to defeat them in the upcoming primary election.

A dark money group connected to Wisconsin's GOP Speaker Robin Vos is attacking conservative candidates in the upcoming primary in the state. It is against the Wisconsin Republican Party's State Constitution to endorse or support a state assembly or state senate candidate in a primary election. The good people in Wisconsin are calling this injustice out.

Here is a report from WI the people – a conservative group in Wisconsin on the latest injustice Vos is part of.

Here is more:

Election Interference

By Bill Savage of WCD

I decided to write this before the election results were known because I didn't want the emotions of either elation or disappointment interfering with my thoughts upon the election.

The WCD endorsed about 28 or so candidates and almost all of them ran because many of us feel that the Republican party just isn't representing us anyone. We wanted to change the direction of the party from within but instead of engaging in an honest open dialog, the party leaders, Brian Schimming, Robin Vos and both their financiers and their minions were unworthy of that task. Instead, they spent close to a half million dollars

SCOTUS Ignites a Glorious Regulatory Reform Revolution

By Williams Kovacs

The recent decisions by the conservative U.S. Supreme Court (SCOTUS) at the end of its 2024 term are of significant importance in the realm of regulatory reform. These landmark rulings, which

end judicial deference of agency decisions and require jury trials when agencies seek penalties, mark a pivotal moment in the fight against the regulatory powers that have shaped the modern Administrative State. They are a continuation of the court's 2022 decision on the Major Questions Doctrine, which mandates that agencies provide statutory support

Steve's Say . . .

The Power of The People

I liken The People to the sea. Most of the time a steady stream of waves continually break upon the beach, a lulling serenity of rhythmic vibrations which comforts the soul. Occasionally a harmonic confluence may create a larger wave version, interrupting the status quo for a brief moment but, after breaking on the beach and leaving its further impression, retreats in obscurity, to be forgotten until the next harmonic builds and breaks upon the shore. The Moon and Sun continually pull upon its majestic body, manifesting their gravitational influence in the tide changes which can be precisely calculated and predicted, adding a longer phase of rhythm to this fantastically conceived creation.

Then sometimes, especially in the early morning hours, the sea can appear to be like glass, calm as a mountain lake, still as a newly frosted field, stretching out in flat majesty in all directions to the distant ends of the Earth. The warm comfort of the sprawling calm brings connectedness to all the distant lands that lay, unseen, across that holy plain, beckoning one to set upon a personal journey on that pathway to everywhere.

But as all mariners know, a great tempest lies within that holy body. At any time, and without warning, that seemingly harmless collection of life's solvent and dissolved minerals can be whipped into a frenzy by wind, storms, earthquakes and volcanoes. Anyone who experienced seasickness knows that even in what appears to be calm seas, an underlying power of unsettlement can reach out from that tranquility to tear at your insides.

And then there's the frightening episodes, when rolling mountains of water reach up to the sky, overshadowing any traveler's vessel with the implicit threat of total destruction should it choose to do so. The hurricane, a marriage between the waters of the Earth and Sky, grants mercy upon no one foolhardy enough to be in its pathway. The collection of vessels littering the ocean floor testifies to its fury and indiscriminate nature.

And so it is with The People.

Throughout recorded history, the normality of life reflects the sea as we normally experience it, steady and rhythmic. Certain events or inventions may make a larger crash upon the shore, but it swiftly becomes a building block for the next big wave to be born out of that holy mix. The ships that sail upon her, from the smallest crafts and sailboats to ocean liners and aircraft carriers, are the leaders that ride upon the ocean of public opinion, that seek out what lies across it, to get to the lands that lie beyond the horizon. These leaders may be explorers, adventurers, merchants or pirates. The first three fulfill the destiny of the collective upon which they ride. The fourth defiles her. They utilize the breadth and majesty of her beauty for unholy purposes.

Great battles continually erupt from among these floating vessels, ranging from races across the expanse to reach a distant land first to outright war to the death. The first demonstrates productive competition, the latter needless destruction. These unending battles, however, necessarily must yield to the latent power of The People when aroused to enragement. When caught out in the open waters during a storm, all vessels submit themselves to the power and mercy of The People. Who survives and who goes down will only be known once the storm passes.

My Fellow Americans, the Storm is upon Us.

For the past several decades, many perceived a creeping uneasiness, a foreboding omen of real trouble accelerating across the world. The 911 attack, the War on Terror, the CO2/Climate Destruction narrative, the Iran nuclear weapons program, pandemics of one sort or another, mass shootings, the burgeoning national debt beyond inconceivable numbers, among many others bombarded our minds with visions of doom and gloom, of death and destruction, apparent manifestations of a failed and broken world. And they are. And if you look no deeper, thats all you will see.

But the real questions are Why? And Who's behind all of this?

That's when the real fun begins. Because to answer these questions one must get out his or her tin foil hat and kaleidoscope glasses and go down into the labyrinth of rabbit holes and tunnels to seek the truth and see what's down there. Spoiler alert: you will find out these intel and security agencies, touted to be the safeguard of protection for The People, are behind it all. Everything. Every scam, every false flag, everything. My conclusion: These agencies were created specifically to bring forth the destruction of America as founded.

As long as America remains, the manifestation that God, specifically the Savior, Jesus Christ, The King of Kings, rules all things and all governments are subservient to Him, the Globalist vision of Utopia cannot be fulfilled. The idea of God-given unalienable rights underpins the authority of any government leader as a steward to that power. And as promised repeatedly within the Bible, when government abuses the power of the sword entrusted to it, God will bring those evildoers to a quick and destructive end.

The hurricane, the most destructive of all storms, is the union of God's heavenly power with the the Power of The People. The past several weeks we've experienced the outer fringes of the approaching political hurricane bearing down upon America. It's about to make landfall very soon. I hope you're ready.

But let us never forget this certainty: God's Perfect Plan always comes forth as He designs it. And God always wins.

Our Vision

We aspire to a world in which people, made in the image of God, reconciled to Him by Jesus Christ, and reflecting God's own creativity, work together to enhance the fruitfulness, beauty, and safety of the Earth, enabling more and more of our neighbors to enjoy good health, long life, freedom, justice, and spiritual and material abundance, for the glory of God and the good of our fellow man, thus fulfilling the two Great Commandments to love God and love our neighbor.

Our Mission

We seek to magnify the glory of God in creation, the wisdom of His truth in environmental stewardship, the kindness of His mercy in lifting the needy out of poverty, and the wonders of His grace in the gospel of Jesus Christ.

Our Identity

A coalition of theologians, pastors, ministry leaders, scientists, economists, policy experts, and committed laymen, the Cornwall Alliance is an evangelical voice promoting environmental stewardship and economic development built on Biblical principles.

Why the 'Green Economy' Is Suddenly in Retreat—in EU, US, and on Wall Street

By Jonathan Miltimore

In February, a stream of tractors driven by Italian farmers arrived at the outskirts of Rome, horns blaring. The scene, which was captured by the Agence France-Presse, was just one of dozens of protests across Europe against EU regulations that farmers said threatened to put them out of work.

"They're drowning us with all these regulations," one farmer at a protest in Pamplona, Spain, told The Guardian. "They need to ease up on all the directives and bureaucracy."

The protests were nothing new. They began in 2019 when Dutch farmers, for the first time, drove some 2,000 tractors to The Hague to protest radical legislation designed to reduce carbon emissions, which disproportionately impacted farmers.

Dutch lawmakers responded in 2022 by passing legislation that required farms near nature reserves to slash nitrogen emissions by 70 percent.

"About 30 percent of the country's cows and pigs will have to go," The Economist noted.

The policy was part of the government's plan to sharply reduce livestock farming in Europe. The thinking was that since the livestock sector contributes to about a third of all nitrogen emissions globally, the government would have to target farmers to meet its goal to cut nitrogen emissions in half by 2030.

So Dutch farmers were given a bleak choice: give a portion of their land to the government or have it taken away. By 2023, some 750 Dutch farmers had reportedly sold their land as part of the state's buy-out scheme. Others were still trying to find a way to preserve their livelihoods.

When asked by a reporter in 2023 whether he thought he would be able to pass his farm on to his children, one Dutch farmer struggled to speak.

"No," he said tearfully. "No."

When asked if this Dutch farmer believed he would be able to pass on his farm to his children, he couldn't hold back his tears.

This is the heartbreaking reality of the #DutchFarmers in 2023. All because of Mark Rutte and his totalitarian land grab policies.

The 'Great Green Retreat'?

Farmers are not the only ones unhappy with Brussels's aggressive war on climate change.

The European Union's effort to reach "net zero" CO2 emissions by 2050 has rankled voters across the continent, something political leaders seem to have realized. Earlier this year, The Guardian lamented the EU's "great green retreat," which included a pullback on a bevy of "Green New Deal" regulations, including:

Plans to put sharp new restrictions on the use of pesticides.

Bans on PFAS (per- and polyfluoroalkyl substances), man-made chemicals that are used in countless everyday products.

Rules restricting new industrial emission, which were relaxed on industries and tweaked to exclude cattle farms altogether.

Calls to relax a pending anti-deforestation law, which, according to Reuters, officials believe could hurt European farmers.

Whether this retreat stemmed from concerns that these environmental regulations would cause serious harm to the economy (and European farmers), or from concern that the Green agenda would lead to a bloodbath at the ballot box, is unclear.

Whatever the case, the reversal didn't prevent a historic defeat for Green parties in June's European Parliament elections, which saw them lose a third of their seats.

"There is no sugarcoating it," the New York Times lamented following the June elections, "the Greens tanked."

Political scientist Ruy Teixeira described the event as a "Greenlash."

"In Germany, the core country of the European green movement, support for the Greens plunged from 20.5 percent in 2019 to 12 percent," Teixeira, a scholar at the American Enterprise Institute, noted.

He continued:

Shockingly, among voters under 25, the German Greens actually did worse than the hard right Alternative for Germany (AfD). That contrasts with the 2019 elections, when the Greens did seven times better than the AfD among these young voters.

And in France, Green support crashed from 13.5 percent to 5.5 percent. The latter figure is barely above the required threshold for party representation in the French delegation.

Bans Against Hot Showers and Swimming Pools?

Pundits across the world are still trying to figure out why Green parties crashed so hard, which leads one to wonder if they were paying attention.

It wasn't just

Carbon Dioxide Pipeline Battle - Seize Land for Green Energy

By Steve Goreham

A battle is underway in five Midwest states over the construction of carbon dioxide pipelines as part of the green energy transition. Opposition to wide-area pipeline networks is rising from farms and communities. But utilities and state governments intend to seize land over landowner protests.

On June 25, the Iowa Utilities Board (IUB) granted the petition of Summit Carbon Solutions (Summit) for a permit to build a carbon dioxide (CO2) pipeline across Iowa. The IUB determined that the pipeline was for "public use," and granted Summit the right to seize land from Iowa landowners using eminent domain. Eminent domain has typically been used to take private land for government projects that serve a public good, but not for private industry.

Summit plans to build pipelines across Iowa, Minnesota, Nebraska, North Dakota, and South Dakota to transport captured CO2 to deep underground storage sites in North Dakota. The cost of the 2,500-mile project is about $5.5 billion.

Summit seeks billions of dollars from the federal government. If the pipeline network becomes operational, the company will receive up to $85 per metric ton in tax credits under Section 45Q of the Internal Revenue Code. The firm intends to sequester up to 18 million tons of CO2 each year, to annually receive tax credits of over $1.5 billion. Summit claims to have signed agreements with over 2,700 landowners to build the pipeline.

Ethanol producers in the five states are interested in participating in the project. Captured carbon dioxide from 57 ethanol plants would be sold to Summit, providing a revenue stream for producers. Billions in federal funds may also be available to ethanol plants that capture CO2. In addition, reducing CO2 emissions may allow ethanol producers to qualify their product as Sustainable Aviation Fuel for commercial airlines.

Supporters claim the project will deliver environmental benefits in the

The Heartland INSTITUTE
Ideas that empower people

THE HEARTLAND INSTITUTE

The Heartland Institute is a national nonprofit research and education organization founded in 1984 and located in Arlington Heights, Illinois.

We have deep expertise on climate change and energy policy, budget and tax issues, school reform, health care policy, and the rise of socialism.

We host several websites including heartland.org, heartlanddailynews.com, climaterealism.com, climateataglance.com, and stoppingsocialism.com.

We also produce podcasts, e-newsletters, videos, books, policy studies, and shorter publications.

We have a comprehensive government relations program as well. We are a trusted resource for state elected officials across the country.

Our e-newsletter, *Heartland Weekly,* is free. Donations are tax-deductible.

The Heartland Institute is a national nonprofit research and education organization devoted to discovering, developing, and promoting free-market solutions to social and economic problems.

Poll Claims Eight out of Ten Americans Want an Electric Vehicle

By Joshua Antonini

The Michigan Economic Development Corporation claimed in a June 18 social media post that eight out of 10 Americans want an electric vehicle.

"Who wants an EV? Actually 81% of Americans," reads a post from the state agency in charge of handing out corporate subsidies. It continues, "81% of Americans say they would consider buying one, with benefits like cleaner air, lower carbon footprints, and quieter roads."

Survey respondents were asked: "What would make you consider buying an electric vehicle?" They could pick from a list: "Lower prices," "More access to charging stations," "Improvements to their range," "Improvements in maintenance costs," "Tax rebates when buying or leasing," "Other," or "I would never consider buying an electric vehicle."

Michigan Capitol Confidential obtained the survey, conducted by Wakefield Research, from the state through an open records request.

About 19% of respondents picked the last option: "I would never consider buying an electric vehicle."

Wakefield Research subtracted those 19% out of 100%, concluding that 81% "WOULD CONSIDER BUYING AN ELECTRIC VEHICLE (NET)."

In other words, if EVs were cheaper, if their driving range increased, if there were more charging stations, and if maintenance were cheaper, then 81% of Americans would consider buying an EV.

Danielle Emerson, the state agency's public relations manager, told CapCon the survey included 1,000 nationally representative U.S. adults ages 18 and older, with an oversample of 250 Michigan respondents.

"One of the survey questions asked respondents 'What would make you consider buying an electric vehicle?' 81% of respondents listed factors that would allow them to consider buying an EV, while 19% said they would never consider buying an EV," Emerson wrote in an email. "The MEDC is committed to working with our partners in state and local government to secure investments from businesses up and down the supply chain such that more people can consider EV ownership in the future."

Other recent polls have found different results.

A 2023 Pew Research poll found that 38% of respondents "are very/somewhat likely to seriously consider an electric vehicle the next time they purchase a vehicle."

A March Gallup poll found that of Americans surveyed, "9% are seriously considering buying," 35% "might consider [a purchase] in [the] future," and 48% "would not" buy an EV.

The MEDC and Gallup surveys were taken in March 2024, and both polled around 1,000 people. The MEDC survey asked 250 Michiganders and 750 Americans from other states. While the MEDC survey found that 19% of Americans would never consider buying an EV, Gallup found that almost half of people polled — 48% — would not buy an electric vehicle in the future. The latter number was up from 41%, recorded in 2023.

A July McKinsey report found that 46% of EV-owning respondents said they were likely to select a gas-powered vehicle for their next purchase.

Joshua Antonini is the energy and environmental policy research analyst at the Mackinac Center for Public Policy. He joined the Mackinac Center in May 2022 as an environmental policy intern and moved to his current position in May 2023.

Climate Alarmists Press Criminal Charges Against Me

By James Taylor

According to the formal charges presented last week, standing up for climate realism also makes me a "fraud" guilty of "crimes against future generations."

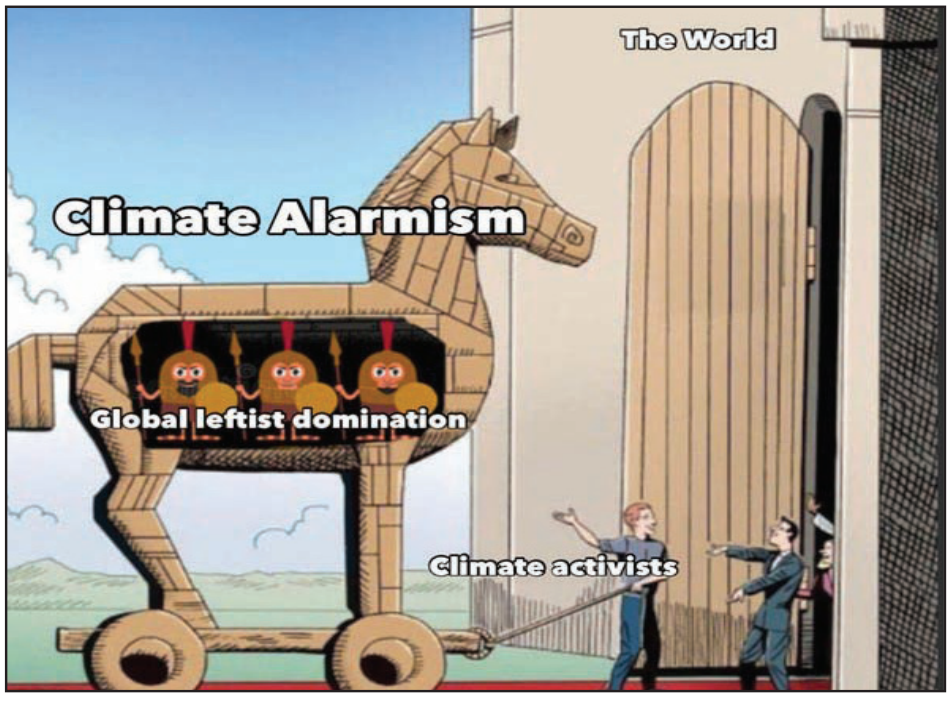
The Climate Accountability Research Project asserts:

"As the President of the Heartland Institute, James M. Taylor is responsible for the alleged crimes of fraud and crimes against future generations and the Earth. Under his leadership, the Heartland Institute continues to be the premiere climate denial organization in the United States spending millions of dollars and advertising campaigns and anti-climate science 'education' to maintain the status quo of fossil fuel usage in America. The Heartland Institute is funded heavily by organizations associated with the fossil fuel industry and continues to promote well disproven lies as a distraction and deterrence from climate forward legislation."

I am proud that my accusers recognize The Heartland Institute as "the premiere climate denial organization in the United States" – even if they present a rather creative definition of "denial."

Everything else they assert is false and dangerous.

Heartland presently does not receive any funding from the fossil fuel industry, although I wish we did. We are a tiny organization compared to the leftist climate activist groups. The top eight climate activist groups receive approximately $2 billion in annual funding, which is approximately 500 times as much funding as Heartland receives.



Even with a massive 500-to-1 advantage in funding and a near monopoly on media coverage, climate activists cannot beat The Heartland Institute in the court of public opinion.

We destroy them in the discerning minds of the public and they can't stand it. Therefore, they now resort to intimidation, seeking to arrest and prosecute me in an international kangaroo court.

Just 10 years ago, I would have entirely laughed this off. Now, however, we have witnessed with our own eyes how fighting back against the left makes one a target for criminal prosecution. The International Criminal Court itself has been hijacked by the international left, with the odds stacked against any climate realist like myself brought to trial.

Steven, I will continue to fight for what is right.

I will never be intimidated into abandoning climate realism and opposing the global leftist agenda. If it leads to imprisonment, the gallows, or anything else, so be it.

"The only thing I'm guilty of is promoting climate truth!"

Heartland is the world's most effective entity fighting the climate alarmist movement. That is why the Climate Accountability Research Project is going after The Heartland Institute and me personally. If they must pursue their nefarious attempt to persecute their enemies, I am proud that The Heartland Institute and I are at the top of their "most wanted" list.

As always, you can count on Heartland to remain a constant thorn in the side of the climate alarmism leviathan.

A Pilot Plant for Net Zero

By Viv Forbes

Both solar and wind energy have fatal flaws – solar stops when the sun goes down or if a cloud blocks the sun; wind fails if the wind is too strong or too weak. But every day we hear of some fantastic and expensive plan to keep the lights on when these unreliable energy twins stop work.

The latest thought bubble from Mr Bowen (the Australian Minister for Generating Blackouts) is for him to be able to drain the energy from electric car batteries to back up a failing grid. He suggests that batteries could also power the house or sell energy into the grid. (They are already scheming on how to use smart technology to prevent homeowners from charging their own batteries when flicker power is fading.)

Bowen's sole sensible comment was "electric cars are batteries on wheels".

But batteries do not generate power. And when they are flat they do not even store power. Fancy trying to keep the lights on while recharging all those batteries with flicker-power; and imagine discovering your Tesla battery is flat just when you need your car some frosty morning. You have just performed a public service - the power in your batteries was drained to cook suburban breakfasts and keep the early trains running.

People who bought an electric car for quiet mobility will suddenly find they were just financing a cog in Bowen's Blackout Insurance Plan.

Australia is an energy island – there are no handy extension cords to French nuclear power, Scandinavian hydro, Icelandic geothermal or American natural gas. (Maybe if we ever get that long extension cord from Darwin to Singapore we can organise a sub-station in Indonesia and import reliable coal-powered electricity from them?)

Australia has abundant coal, gas and uranium resources but exploiting these is now demonised and blocked by red/green tape and law-fare. Most of our petroleum products are imported and we have a tiny stockpile of refined fuels. To undertake extensive oil/gas exploration in Australia would need infinite patience, many lawyers and very deep pockets.

So, like drunken teenagers in a stolen car on the wrong side of the road, we accelerate towards the green energy mirage - net zero by 2030.

We need to see a net zero pilot plant operating before we follow Pied Piper Bowen down this risky road. And we need to know the full cost.

Mr Bowen should declare Canberra the site of a Net Zero Pilot Plant. This city-state is ideally suited to host such a demonstration plant - it has well defined boundaries with significant rural, urban and industrial areas; its population and local politicians strongly support the green energy agenda; and every federal politician and Cabinet Minister visits regularly and can monitor progress of this important experiment.

Mr Bowen should be in charge and he should start by declaring a deadline of 2027 to stop all usage of coal/gas/diesel fired electricity or heating within the Australian Capital Territory. To demonstrate the bona fides of this pilot plant it should be legislated now that all power lines bringing coal/gas power into the ACT should be cut no later than December 2026.

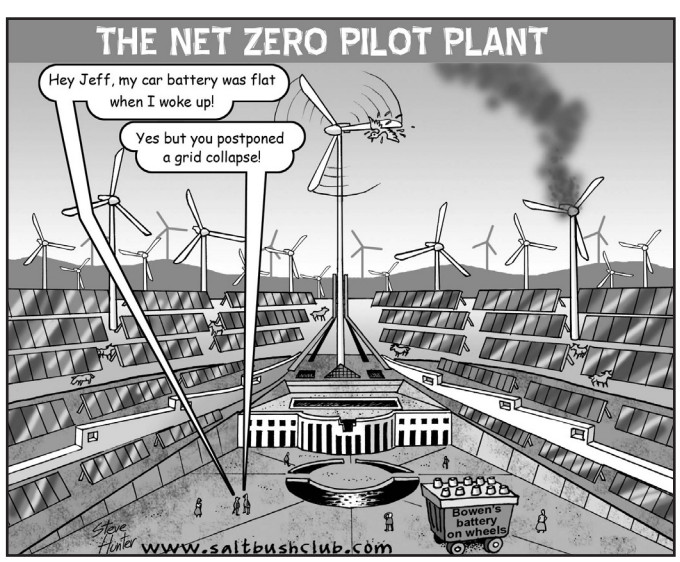
Most Canberra residents are well paid so he should mandate that the roof of every residence or factory must be covered with solar panels, with battery-powered cars in the garage and backup batteries on every veranda.

Canberra also has plenty of hills to host wind turbines – they should also replace that massive flagpole on Parliament House with a large wind turbine. (They should also insist that the wind companies fund a permanent veterinary station nearby to treat injured birds and bats.)

There is also a lot of green space and parkland in ACT – these can host their quota of solar panels, all angled correctly to maximise collections from the far northern sun. Moving the massive and controversial Wallaroo Solar Factory planned for the Yass Valley into nearby ACT will kick-start Canberra's green revolution. Pet goats should be encouraged to keep the grass tidy under all those panels.

Burning gas or wood within ACT should be banned – Mr Bowen should get Twiggy Forest to build a floating green hydrogen generator on Lake Burley Griffin. This will provide locally-generated green fuel to use in their cars, taxis, barbeques and lawnmowers.

Greens blame cattle for global warming – so there should be no beef products on sale in ACT – loyal Canberrans will surely welcome the chance to test a diet of mealworms, grass fed goat meat, sun-dried sourdough and almond milk. This will bring a personal green focus to the net zero crusade.



Canberra will need to streamline their approvals processes for all this green land use change. With net zero at stake we cannot allow eternal objections such as those which caused a 13 year delay for extensions to the Acland Coal Mine in Queensland. Just a brief notice in the classified ads in the Canberra Times should suffice in this race to save the planet.

Any Canberra residents who are sceptical that this green energy pilot plant will operate successfully should be free to import a small modular nuclear reactor for their suburb. Or move to Queensland.

The whole Anglosphere has been led into a green energy swamp - our enemies cannot believe their luck.

Hopefully Trump/Farage/Dutton will lead us back to safe ground before the Bowen blackouts arrive.

Welcome the Warmth

By Viv Forbes

At dawn today (30th July) mid-winter in sunny Queensland, it was zero degrees on the lawn outside our kitchen and the small water tub for our chooks was iced over.

Every morning, as soon as it gets light, Judy puts a winter coat over her jamas, adds gloves, glasses, rubber boots, a beanie and a walking stick (icy grass is very slippery). She then trudges down the hill to check any new-born lambs and then lets the sheep out of their dingo-proof night-camp into their paddock for the day. As soon as they are let out, they dribble into a long line and, led by the wisest old ewe, they wend their way across the frosty flat and then make their way up the hill to the highest point facing the morning sun.

Unlike Green politicians, sheep are not stupid. They know that warm air rises so in winter they camp at the highest point they can find. And in cold mornings, they try to catch the early rising sun.

Here are some Canadian Damara sheep wishing they were in Mexico:

This picture was taken by our friend Helmut Lang in Canada. Can you imagine Canadians being scared by the prospect of a bit more global warming? Has the whole world lost its wits?

Our house was not built by stupid people - we call it "Hilltop" and it faces North – it usually stays above the frost line in winter. And not all residents of Victoria are stupid either – in winter hundreds of them clog up our highways, heading north to follow the sun. Maybe they are like cattle caught in a snow storm - just drifting north before that cold southerly wind blowing icy air up from the Antarctic?

Al Gore and his Green disciples bleat about the imaginary "dangers of global warming". They should check where life flourishes – is it in the equatorial zones or at the icy poles? Are there more people in Nome, Alaska or in Mexico City? And if atmospheric CO2 controls temperature, both places should be about equally warm? Maybe it is the amount of heat received from the sun and not CO2 that is the main driver of global temperatures?

And even if they fear global warming, they do not need to cripple our electricity generators here with their green energy nonsense – they should just move South to the Snowy Mountains; or buy a house facing the Roaring Forties at Cape Grim in Tasmania; or even slip down to Invercargill in New Zealand for a permanent cure for those with a chronic dose of global warming syndrome.

Green Pied Pipers and the lemmings who follow them started the '"Global Warming Scare". These foolish politicians and their alarmist media mates know more about political science than they know about climate science.

As each of their forecasts fail, they change their chant – "global warming" becomes "climate change" then it becomes "wild weather" - all promoted, not by meteorologists, but by propagandists in government media units.

Anyone with an ounce of knowledge about Earth history knows that the Mammoths did not die of heat stroke – they were entombed rapidly in ice. And even Saint Greta should

Energy should play key role in 2024 Pennsylvania (and US) elections

By Don Ritter

Pennsylvania Senator John Fetterman thinks energy won't be at the forefront of his constituents' voting decisions this year. But he's not accounting for the difference between 2020 and 2024, or the clear connection between energy costs, jobs and inflation.

Inflation, illegal immigration and crime are key voter concerns in the 2024 elections.

While energy may have had a marginal effect in Pennsylvania's 2020 election cycle, it has risen in prominence because of its direct (and immutable) connection to higher prices for virtually every product and service, and because the Biden-Harris near-four-year war on fossil fuels – leasing, drilling, mining and fracking – is driving up inflation.

A recent survey of 800 registered Pennsylvania voters found that more than two-thirds named inflation as an impediment to maintaining their standard of living.

Yet, by prioritizing a debatable "climate emergency," the Biden-Harris administration has made energy production much more difficult and costly, while injecting 400 billion borrowed Green New Deal dollars into wind, solar, battery and other "renewable" energy technologies. Add to that the (so-called) Inflation Reduction Act and its billions in new spending on "green" infrastructure. Finally, crushing regulations on the energy industry add fuel to the inflation fire.

Those actions have sent prices higher for everything we make, grow, ship, drive, eat, wear… the list of products derived from fossil fuels is nearly endless.

Donald Trump will make the opposite argument to Pennsylvania's voters. Republican Senate candidate Dave McCormick will too, by attacking incumbent Senator Bob Casey's support for vast Green New Deal spending and anti-fossil-fuel Biden-Harris energy policies, all driving up inflation.

Perhaps most importantly, while Bob Casey has been less than vocal on just about everything, he has been the deciding vote for a tiny Senate Democratic majority which has wholeheartedly supported the full range of inflationary Green New Deal, anti-fossil-fuel regulation and spending.

Casey's one, tepid, politically expedient objection to his Administration's multi- trillion dollar, fossil-fuel-killing energy agenda was a statement issued by his office – not even a vote – expressing concern about a Biden-Harris ban on new exports of liquefied natural gas, which a court later overturned. That's it.

The McCormick campaign notes that Pennsylvania gas production has been suppressed by federal policies that impede pipeline construction. McCormick points out that, "under Biden's energy policies, rubber stamped by Bob Casey, we haven't been able to access clean natural gas," because pipelines are essential for bringing fracked gas to end users. Casey, McCormick emphasizes, "supports policies that are costing us jobs and driving up energy prices even more."

Democrat nominee for president Kamela Harris, contrary to leaks to the press from her campaign staff, has been enthusiastically vocal about her opposition to fracking and has voted for inflationary Green New Deal spending on numerous occasions.

Compounding the Casey-Biden-Harris effect in the Keystone State is Democrat Governor Josh Shapiro's support for supposedly "green" energy. His proposals for a $499-million carbon tax and expanding expensive, weather-dependent, unreliable, part-time wind and solar energy would add to the already considerable burdens on families and businesses.

Claims that wind and solar costs are steadily falling ignore the huge costs (likely

SCIENCE & ENVIRONMENTAL POLICY PROJECT

The Week That Was July 13, 2024

Quote of the Week:

"IPCC is one of the worst sources of scientific misinformation." — John Clauser, Nobel laurate in Physics (2022) [H/t Willie Soon]

Number of the Week:

0.75°C, 1.35°F

This Week:

By Ken Haapala, President, Science and Environmental Policy Project (SEPP)

The Science & Environmental Policy Project began in late 1990 as a research effort by atmospheric physicist S. Fred Singer and a handful of graduate students working out of a small office in downtownWashington, D.C.The Project had two goals: (1) to gather material for a book on global environmental issues,and (2) to conduct a survey of scientists affiliated with the UN Intergovernmental Panel on Climate Change to determine the extent of what was, even then, being touted as scientific "consensus" on global warming.

What the graduate students discovered with their survey convinced Dr. Singer to set his book aside and instead to circulate among senior members of the American Meteorological Society a "Statement by Atmospheric Scientists" on greenhouse warming, which was quickly endorsed by 46 leading climatologists and atmospheric physicists (and eventually by nearly 100). That statement, issued on February 27, 1992, drew widespread media attention and was cited more than 150 times in the press. It was the first inkling journalists had that there was no scientific consensus on the reality of a global warming. Indeed, there was raging debate.

The Science & Environmental Policy Project was incorporated in the state of Virginia in 1992, and established as a nonprofit, 501(c)3 educational organization in late 1993.Today, having expanded from that core of 46 scientists, it draws on an international network of some of the finest minds in science who donate their time to promoting sound, credible, peer-reviewed research as the only basis for the health and environmental policies that affect us all.

You can help in two ways:

1. Download SEPP reports, press releases, and articles and pass them on – to newspaper editors, journalists, educators, civic leaders, and others. Help stop the fearmongering and the distortion of science.This is the most important thing you can do.

2. Support SEPP with your tax-deductible contributions. The environmental pressure groups, which present so much wrong information, have a combined clout of more than $1 billion a year.The Science & Environmental Policy Project has had far-reaching impact on less than one-hundredth of one percent of that figure. It's money well and effectively spent.

Send your contributions to:

And thank you.

Scope: This TWTW will focus on two recent presentations and one website post. First will be the presentation by Professor William Happer at the EIKE Climate and Energy Conference. Second is a post by Roy Spencer, a pioneer in the measurement of atmospheric temperatures by satellites. Finally, comes a discussion of the presentation by solar scientist Willie Soon at the 5th CLINTEL Conference.

****

Radiation Transfer, Update: Professor William Happer sent TWTW the notes he prepared for the International EIKE Climate and Energy Conference in Vienna on June 15, 2024. With slight corrections for typos, they have been posted on the SEPP website under Scientific Papers, 2024. The title of the talk was "Radiation Transport in Clouds" which is part of that which he and his colleague Willim van Wijngaarden are involved with in addressing the problem of clouds in predicting weather and climate.

Although many climate modelers have admitted the problem of clouds, there is little new work being done by them. As Nobel Laureate John Clauser pointed out, clouds have a significant cooling effect, which the Intergovernmental Panel on Climate Change (IPCC) largely ignores. Admitting that clouds are a problem is not the same as trying to articulate the extent of the problem. The work by Happer and van Wijngaarden involves formulations such as integro-differential equations which are beyond the scope of TWTW. (An example is on page 12 of the post.)

Instead, TWTW will focus on the earlier part of the notes which provides a summary of what has been demonstrated in the past. The discussion below and calculations are based on clear sky, without clouds, which significantly reduces sunlight hitting Earth. Below are Happer's comments with boldface added, but viewgraphs not shown here but are on the SEPP website. An interested reader is urged to view the full post in PowerPoint at https://view.officeapps.live.com/op/view.aspx?src=https%3A%2F%2Fwww.sepp.org%2Fscience_papers%2FHapper_Talk.pptx&wdOrigin=BROWSELINK

"Let me begin by thanking the conference organizers for inviting me to the storied city of Vienna, the home of Stefan, Boltzmann, Doppler, Mach and many other heroes of international physics.

I am going to sketch some details of how radiative heat transfer works in Earth's clouds. Hendrick Svensmark, Nir Shaviv, John Clauser and others have already discussed how important clouds are, compared to greenhouse gases.

But let me make one thing clear at the outset. There is no climate crisis and there will not be a climate crisis from the increases of atmospheric greenhouse gases. The forcings are too small, about a 1% decrease of radiation to space for a 100% increase (doubling) of CO2 concentrations. The resulting warming will be very small and will probably be a net benefit to life on Earth. And agriculture, forestry and all photosynthetic life will greatly benefit from more of the plant food, CO2.

No doubt some proponents of the myth of a climate crisis are sincere, if misguided. However, many others support the myth out of a lust for power and wealth. Alas, this has happened all too often in human history. Emmanuel Kant got it right; 'Aus so krummen Holtze, als woraus der Mensch gemacht ist, kann nichts ganz Gerades gezimmert werden.' Isaiah Berlin's English translation is: 'Out of the crooked timber of humanity, no straight thing was ever made.'

Some of the earliest quantitative work on radiative transfer and clouds was done by the Scottish physicist, John Leslie. He was the first to make quantitative measurements of downwelling radiation from the daytime and nighttime sky, that is, of the 'sky temperature.' To do this he used a sensitive differential thermometer, which he called an 'aethrioscope.' It consisted of two spherical glass bulbs, connected by a capillary tube containing a short column of alcohol (liquor) in the midsection. The lower bulb was shielded from radiation and was held at room temperature. The upper bulb was at the focus of a parabolic reflector, a polished metal cup, which let downward radiation focus on the bulb and heat it. Vice versa, thermal radiation emitted from the bulb was projected into the sky above. The cup played much the same role as the dish antenna of a modern radar. The colder the apparent sky temperature, the higher the column of liquor would be forced upward toward the absorbing-emitting bulb.

Working with the aethrioscope around the year 1800 Leslie noticed the substantial increases and decreases of downwelling radiation as clouds passed over head, and as described by his words on the viewgraph." [Viewgraph is not presented here.]

Happer presents two graphs for Spectral Probability: one for Short Wave radiation (Sunlight) which can be measured with an instrument called a Pyranometer; and the second for Long Wave radiation emitted by Earth to space which Happer calls Earthglow. This can be measured with an instrument called a Pyrgeometer. Happer writes:

"Even in the year 1800, Leslie was well aware that there were two kinds of radiation in the atmosphere, sunlight which you could see, and thermal radiation generated in the atmosphere, which I will call earthglow, which you could not see but could feel as radiant heat if it were strong enough."

Happer brings up the formulas for each type of radiation then states:

"There is very little overlap between the two probability densities, which are equal at a wavelength of about l= 4.2 mu [micrometers or microns], which can serve as convenient boundary between "short wave" radiation or sunlight, and "long wave" thermal radiation or earthglow emitted by Earth's surface and atmosphere.

The probability curves assume thermal radiation at a temperature of Ts = 5772 K for sunlight and Te = 288.7 K for earthglow."

Happer then gives details of both types of instruments to measure sunlight and earthglow. The important point is that there is little overlap, so the data from each type of instrument is quite unique. He states:

"For our discussions, the main point is to show that an ideal pyranometer is insensitive to the long wave thermal radiation from greenhouse gases and clouds, radiation that continues to downwell, day and night. The pyranometer shows no signal at all during the night when there is no solar radiation. Moonlight and starlight are more than one hundred thousand times weaker than sunlight and can be neglected. The viewgraph also shows the dramatic difference of downwelling solar radiation for a clear day on the left, and for a cloudy day on the right. [Not included here] During occasional cloud breaks when the sun can reach the ground directly, the downwelling solar radiation spikes upward. When clouds return to shadow the sun, the downwelling radiation comes from diffuse sunlight that has had multiple scattering on cloud particulates before reaching the pyranometer. Much of the radiation is reflected back to space and does not heat the ground or the atmosphere.

But Mother Nature is subtle. Paradoxically, skies with lots of clouds can increase the solar flux on some ground patches while decreasing it on others. The highly reflecting water droplets of the cloud edges forward-scatter sunlight and add to the direct irradiance from the sun.

The solar flux on a partly cloudy day is shown as the jagged blue curve on the viewgraph. [Not shown here] The same viewgraph shows the pyranometer output on a clear day. The drifting clouds can not only decrease the solar flux on the ground, compared to that on a clear day, but they can increase it by many tens of per cent.

On average, scattered clouds decrease solar flux on Earth's surface, but for time intervals of a few minutes, they can increase the flux substantially, compared to a clear day."

Happer discusses the pyrgeometer which measures how cold (or warm) the sky is. He gives a viewgraph from Thule, Greenland, which illustrates that on a cloudy day the sky can be warmer than it is on a clear day. He states [viewgraph not shown here]:

"This viewgraph shows a two-week recording of downwelling thermal radiation measured with a pyrgeometer at Thule, Greenland in July. There is very little variation of downwelling radiation from day to night. But there is a large difference between clear and cloudy weather, with close to 340 Wm-2 downwelling from cloud bottoms on overcast days and around 260 Wm-2 in clear weather, where the downwelling comes from thermal emission of water vapor, H2O, and CO2. The cloud bottoms produce the same flux as a blackbody with a temperature of about 5 C. The clear sky produces the same flux as a blackbody with a temperature of about -13 C.

Note the suppressed zero on the vertical scale! The downwelling from cloudy skies is only about 30% greater than that from clear skies."

Happer then shows earthglow as measured from space. He states:

"The previous viewgraphs show downwelling radiation onto Earth's surface. But upwelling radiation to space is qualitatively similar. Shown here are longwave infrared and visible images of the Earth, recorded at the same time by a geosynchronous satellite parked in the equatorial plane above Ecuador.

The right side of the figure shows blue sunlight, at wavelength of 0.47 micrometers diffusely reflected in the late afternoon when the time was 6:12 pm in Princeton, NJ. Night has already descended on Europe and the eastern Atlantic, so the right side of the image appears black.

The left side of the figure shows that Earth "glows in the dark," at a wavelength of 10.3

Number of the Week: 0.75°C, 1.35°F
In his talk, Happer estimated that the total influence of a doubling of CO2 on temperatures will be only 0.75°C, 1.35°F (maybe less). It will warm that much in 30 minutes on a sunny spring morning in Northern Virginia, across the river from Washington.

Winter Without Your Gasoline Car?

By Steve Goreham

January of this year brought near-zero temperatures to Chicago and other northern cites, producing an electric vehicle (EV) charging nightmare. National media showed images of owners pushing dead EVs around charging stations and waiting for hours to try to charge their vehicle. Drivers lucky enough to connect to a charger sat in their freezing-cold automobile, unable to run the heater while the car tried to charge. Nevertheless, the federal government and many states continue to push to eliminate gasoline vehicles.

On March 20, 2024, the Environmental Protection Agency announced a final rule, Multi-Pollution Emissions Standards for light vehicles sold in model years 2027 to 2032. The rule includes restrictions on the amount of carbon dioxide that can be emitted per mile, restrictions which most gasoline cars will be unable to meet. The goal of the rule is to force manufacturers to produce EVs for up to 56% of new light vehicle purchases by 2032.

Twenty-two states have adopted zero emissions vehicle (ZEV) mandates. California regulations call for 100% ZEV sales by 2035. Seventeen states have adopted the California ZEV regulations. Many of these are northern states with cold winters.

"Zero-emissions vehicle" effectively means electric vehicle. Hydrogen fuel-cell cars are failing to penetrate the US market. California has 55 public hydrogen fueling stations, but that number has been declining. Hawaii has a single hydrogen fueling station, the only other station in the US. Battery electric vehicles and plug-in hybrid EVs are the only vehicles that can meet the mandates at this time.

I recently met a guy from Cleveland at a conference whose wife had a Tesla. Two years ago, winter temperatures dropped to 10 degrees Fahrenheit at their home in Cleveland and her vehicle would not charge. She complained to the manufacturer to no avail.

In cold weather, electric vehicles lose driving range and take longer to charge. A 2020 study by the Norwegian Automobile Federation found an average loss of 18.5% in driving range during winter temperatures of 21-37 degrees Fahrenheit. Cold weather charging times increased up to 50 percent longer, depending upon car model. And as the woman in Cleveland found out, EVs will not charge at temperatures near zero degrees Fahrenheit.

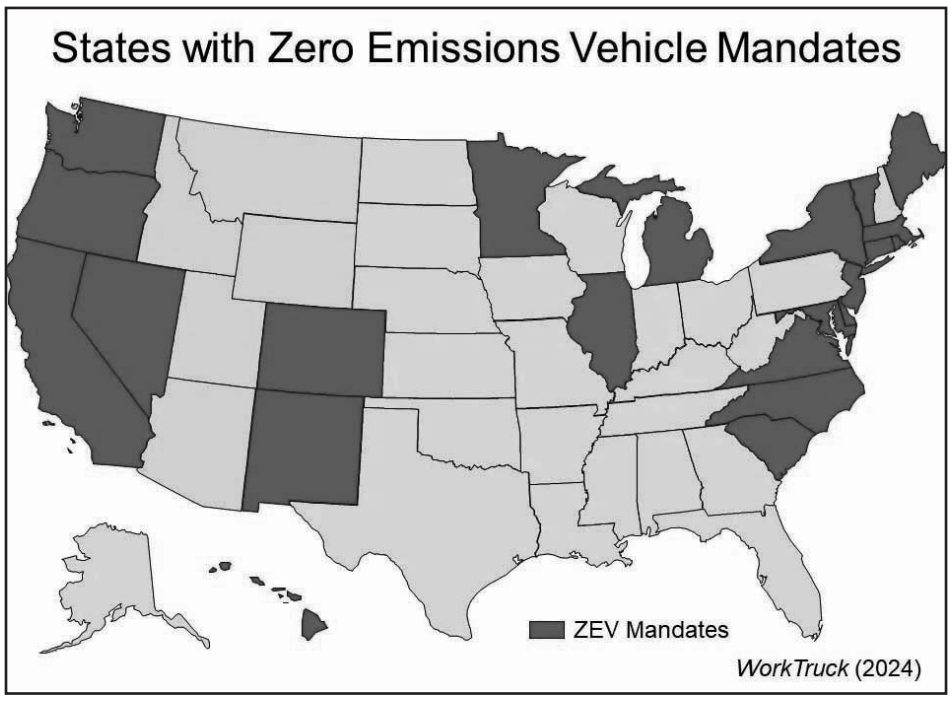
A solution might be a heated garage or heated charging facility. But all US charging companies are losing money today, even without building heated public charging garages. About 30 percent of the US population lives in multi-unit housing, without a garage. Stretching a charging cable across a public walkway in the snow is a poor solution. And many homeowners with a garage do not park their car in their garage or cannot heat it.

Minnesota was the first midwestern state to adopt California's ZEV regulations. The average high and low temperatures in St. Paul, Minnesota in January are 26oF and 7oF, poor conditions for EV charging. Montpelier, Vermont's January average temperatures are the same as in St. Paul, with a 100% ZEV mandate in 2035 as well.

Maine's mandate will require 43% of new vehicles sold by 2027 to be ZEV and 82% by 2032. But Augusta Maine's average high and low January temperatures are 28oF and 11oF, not much warmer than Minnesota. Don't state political leaders realize that gasoline car bans will force winter hardship on their citizens?

Last December, Canada mandated that all light-duty vehicles must be 100% zero emissions by 2035. Unless you have a heated garage in Canada, you soon won't be able to charge your new EV for most of three months of the year.

In addition to the poor driving range and higher purchase price that comes with an EV, owners of cars in northern states will soon be forced to contend with poor performance in cold weather. Federal and state officials should reconsider their efforts to ban gasoline vehicles.



Warmth *cont. from page 5*

know that the real danger to life on Earth is not global warming but global cooling and the inevitable return of the suffocating ice sheets. Here is what an ancient Scandinavian legend says:

A long time ago he universe was made of ice.

Then one day the ice began to melt, and a mist rose into the sky.

Out of the mist came a giant made of frost,

And the Earth and the heavens were made from his body.

This is how the world began and that is how the world will end, not by fire but by ice.

The seas will freeze, and winters will never end.

Geologic evidence shows there have been many ice ages. However, as the above legend shows, only rare tribal memories go back further than the last ice age. Despite the shrill forecasts of dangerous global warming from Al Gore's Gang, there are many signs that we are past the peak of the Holocene Warming. It is the next cycle of global cooling we have to fear.

For example, in Greenland, "The Lost Squadron" travelling from USA to Britain in 1942 was forced to land on the Greenland Ice sheet. Two B-17 bombers and six P-38 Lightnings ran out of fuel and crash-landed on the Greenland ice sheet.

The crews abandoned the planes. The planes were rediscovered 50 years later using steam boring machines. They were buried under 268 feet of ice. (In 2002 a recovered and restored P-38 flew again.)

Our family ancestors learned about weather.

Mine came from Britain and Denmark. Some went to Dunedin in far south New Zealand. There they started to die out and decided to move again – to sunny Queensland.

Judy's ancestors started living around Armidale in NSW but also found it too cold and migrated north to Sarina in North Queensland (every winter her sheep wish she had stayed in the warmth of north Queensland.)

Here is our pictorial comment on "The Evolution of Human Energy":

https://saltbushclub.com/wp-content/uploads/2024/07/welcome-the-warmth.jpg

Feel free to use this cartoon with no alterations.

Energy *cont. from page 5*

many trillions of dollars) of backing up their intermittent electricity generation with expensive coal or gas power plants (or huge banks of wildly expensive batteries) that kick in whenever the wind and sun don't cooperate with energy needs – which notably happens some 60-70% of every month and year!

Shapiro offers "not just disastrous energy policy" but "expensively disastrous energy policy," says David Taylor, CEO of the Pennsylvania Manufacturers' Association, which educates and lobbies on behalf of 550,000 workers in America's fifth largest manufacturing state.

Indeed, both state and federal policies are to blame for causing many coal-fired plants to close and coal's share of Pennsylvania electricity generation to drop from more than half to less than on-fifth over the past decade. Pennsylvania's largest such generator at Homer City closed a year ago, and two more have announced early retirements within a few years. Plans for natural gas power plants have been shelved.

Natural gas now produces more than half of Pennsylvania's electricity, but gas generation and electricity affordability have also suffered under costly government regulations and the threat of more to come.

All of that adversely affects manufacturing costs, jobs, and the price of goods and services.

In the ten years prior to 2019, when a carbon tax was first proposed, $14 billion worth of gas-fired plants were built in the state, reports Shawn Steffee, a Boilermakers union business agent. However, none have been built since, and two $1-billion proposals were canceled.

"It is highly unlikely that we will build another," says Steffee.

Whether it's gas plants not being built or coal plants being closed, both jobs and power grid reliability take a hit. The threat of recurrent blackouts is rising, and we are getting closer than ever to having electricity when it happens to be available, instead of when we need it.

In fact, government and industry overseers of our high-voltage transmission system have warned of energy shortages resulting from ill-timed closures of fossil fuel plants that increase the share of far less reliable wind and solar. Significant regional blackouts across much of the Atlantic Seaboard are not out of the question. They would be deadly amid heat waves and deep freezes.

That would certainly dim the electoral outlook of politicians supporting green energy. Far more important, though, is what it would do to jobs, factories, hospitals, schools and families.

As for the effect of job losses, one need only read a Washington Examiner account of federal officials meeting with Homer City citizens affected by last year's plant closing.

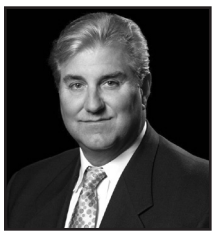
"The vast divide between the government's understanding of the needs of the people they serve and the people themselves was never more excruciatingly apparent than at the meeting," the article began. It then presented wrenching personal stories of unkept promises to furloughed workers whose lives were "uprooted forever" – and talked about a slide show at the meeting that extolled the "good intentions" of federal agencies.

That seems to be a constant refrain of politicians and bureaucrats. Good intentions drive ill-advised policies that bring the opposite of what their authors claimed would happen.

Donald Trump and Dave McCormick will make the case for redirecting federal policies and funding away from the life-changing "green" energy and economic agenda – and toward traditional abundant, reliable and affordable energy.

At stake on November 5 are the House, Senate and Presidency, and the deciding votes could well come from Pennsylvania energy consumers.

Don Ritter is a former Republican congressman from Pennsylvania's Lehigh Valley.



Who Is Tim Walz?

By Gary Wickert

There are 50 governors of these United States. Of those, twenty-seven (27) are Republicans and twenty-three (23) are Democrats. The Republican Party picked up one seat in the 2022 elections, in Louisiana. That was the only seat to change parties last year. There are currently no Independent or third party governors in the U.S. The party of a state's governor does not always follow suit with how blue or red a state is. For example, Maryland is the second-most liberal state in the country, barely taking second place behind Massachusetts, and followed by Rhode Island, New York, Vermont, California, and Hawaii. Yet, Maryland has a Republican governor. These things do not always follow suit.

Now that the floundering Harris campaign has gone with a Carl Fredricksen (78-year-old, retired helium balloon salesman from Disney's animated feature "Up") look-alike as her vice-present pick, it might be time to understand exactly who Minnesota Governor Tim Walz really is. While Democrats seemingly do not care who their presidential or vice-presidential candidates are going to be, as long as they have a "D" after their name, Republicans do want to know, because we have seen a long line of existential threats to American values and culture on the Democrat side, whether they can cognitively function and string together a sentence or not.

Tim Walz, who looks much older than his sixty years might otherwise suggest, is a politician, former schoolteacher, and retired U.S. Army non-commissioned officer who has been the liberal governor of Minnesota since 2019. His politics are also much more radical and progressive than his supporters might otherwise want you to know. Before we get into a little bit about his policies and history, know that the two most radically progressive in the Democratic Party—Alexandria Ocasio-Cortez (D-N.Y.) and Ilhan Omar (D-Minn.)—were also the most exuberant about his selection. Former President Trump described the selection of the Minnesota governor as a "shocking pick", and it has become clear that Harris and Walz together make up the most progressive and radically far-left ticket in the history of American politics.

Dubbed "Tampon Tim", Republicans have already been quick to point out that a bill he signed as governor required menstrual products, including tampons, to be provided in both boys' and girls' public-school restrooms in Minnesota. a bill he signed as governor which went into effect at the start of this year. It requires menstrual products, including tampons, to be provided in both boys' and girls' public-school restrooms in Minnesota. "Not all people who menstruate are female" his supporters said. CNN has reported that Walz was able to enact many of the far-left progressive policies that Biden and Harris espoused but failed to push through Congress, transforming overnight the once-great state of Minnesota from the Land of 10,000 Lakes to the Land of Liberal Lunacy. He pushed through initiatives which included taxpayers picking up the tab for college tuition for some students, exaggerated family and medical leave act laws, and a bill declaring abortion a "fundamental right" without any restrictions at all stages of pregnancy. Walz even removed any requirements that a doctor try to save babies born alive after abortion.

Walz pushed through initiatives which required health insurance to pay for

"gender-affirming" (people who identify as transgender or nonbinary) care, and left Minnesota standing by itself as one of only a handful of states that raised taxes, aimed at Minnesota businesses and high-earning residents. He instituted a state law requiring all schools (meaning taxpayers) to pay for breakfast and lunch for 4.3 million students.

Walz's policies include a new paid family and medical leave act which require all employers to allow employees to disappear for up to 20 weeks (over a third of a year) while receiving benefits from taxpayers for doing so. The benefits are paid by the state but funded through payroll deductions on wages, forcing hard-working employees to pay for those not working quite as hard.

Under Walz, Minnesota has invested $1 billion of other peoples' money providing the same type of "affordable housing" that caused the housing crash in 2008. It seems that some liberals never learn. He raised the sales tax in the seven-country Twin cities metropolitan area and signed a bill that requires utilities to switch to 100% carbon-free electricity (wind, solar, battery, etc.) by 2040—just 15 years from now.

Walz wasn't done there. He restored voting rights to more than 55,000 ex-felons whose vicious crimes and frequent arrests caused them to lose their say in the law-making process, no longer emphasizing that voting is a right with responsibilities.

The most important 1 hour and 42 minutes you will ever spend to save your country. A complete lack of leadership from Gov. Tim Walz to the mayor of Minneapolis. Back the Blue! They are the thin blue line between us and anarchy. Gov. Walz is no leader; he is the most radical, far-left governor in history, and he has demonized our law enforcement community. He failed to act as violent rioters burned Minneapolis and destroyed hundreds of small businesses, and his inaction and lack of leadership has destroyed a once-great city. His state is home to 25% of all ISIS recruits in the country. Don't believe the lies. "Harris and Walz have both supported the 'Defund the Police' movement in local and national media, are the most radical presidential ticket on crime and policing in recent history. Their election would make America less safe abroad and, more importantly, at home." That isn't my opinion, it's a quote from liberal Newsweek magazine. (https://www.newsweek.com/tim-walz-has-been-disaster...). A vote is not a valentine; you aren't confessing your love for the candidate. It's a chess move for the world you want to live in. This is not just the fall of Minneapolis; this is the beginning of the fall of America. The most frustrating part of this documentary is knowing that the people who really need to watch it, never will.

However, the true legacy of Tim Walz will forever be his cowardly lack of leadership during the Black Lives Matter riots and lawlessness which followed the death of George Floyd in May of 2020. The most important 1 hour and 42 minutes one can spend in an effort to save America is watching the multi-part documentary entitled "The Fall of Minneapolis." This compelling Liz Collin piece features body worn camera video of George Floyd's arrest, interviews with officers who served during the riots, key evidence from the autopsy and Derek Chauvin's trial; and the riots and aftermath that was allowed to take place without any law enforcement intervention. The documentary can be seen on YouTube.

The rioting and destruction of a once-great city laid bare the complete lack of leadership from both Gov. Tim Walz and the hapless mayor of Minneapolis. One of the most radical, far-left governors in history has demonized our law enforcement community. He failed to act as violent rioters burned Minneapolis and destroyed hundreds of small businesses, and his inaction and lack of leadership has destroyed a once-great city. His state is home to 25% of all ISIS recruits in the country. Don't believe the lies. Even the far-left leaning Newsweek was quoted as saying, "Harris and Walz have both supported the 'Defund the Police' movement in local and national media, are the most radical presidential ticket on crime and policing in recent history. Their election would make America less safe abroad and, more importantly, at home." That isn't my opinion, it's a quote from Newsweek.

The country was inundated with live coverage of flames bursting from the city's 3rd Precinct police headquarters and raging inside a looted AutoZone store. Hundreds of buildings and businesses were burned to the ground and innocent store owners were killed in the streets; including one such murder that was broadcast on social media. One image showed a "protester" illuminated by fire carrying an upside-down U.S. flag. As the lawlessness grew and hundreds of businesses were being destroyed, Walz, a 24-year National Guard veteran who took office the year before, waited an astonishing 18 hours after Minneapolis Mayor Jacob Frey pleaded for at least 600 guardsmen before finally sending in the troops.

At the same time, Walz proudly told would-be supports in 2018 in a newly resurfaced video that he handle assault weapons "in war." "We can make sure those weapons of war, that I carried in war, are only carried in war," Walz said in the video. He has since been accused of "stolen valor" because in reality, he quit the National Guard before his unit was deployed.

It is important that we get this election. Far too many Democrats are not enthralled with their selection again this time around, but they are willing to vote for anybody other than Donald Trump. A vote is not a valentine; you aren't confessing your love for the candidate. It's a chess move for the world you want to live in. This is not just the fall of Minneapolis; this is the beginning of the fall of America. The most frustrating part of the Minneapolis documentary is knowing that the people who really need to watch it, never will.

Walz fiddled while Minneapolis burned (not from climate)

By Craig Rucker

The Harris-Walz ticket marches the Democratic party further Left than it has ever strayed before.

Walz was the governor who stood by and watched as his greatest cities went up in flames after George Floyd died during an arrest by Minnesota police. By the time Walz finally sent in the National Guard, looters, arsonists and rioters had successfully destroyed civil order.

Walz is prepared, however, to prevent the Earth from "burning" by mandating wind turbines, solar panels, electric vehicles, taxes, regulations and subsidies.

On climate, energy and the environment Walz is either as radical, or more radical than Harris, leaving the pair playing deep roving left field with no balance in sight.

Harris' Senate voting record at one time clocked in to the left of the entire chamber, including Bernie Sanders! That's according to a GovTrack analysiswhich has since gone down the memory hole.

Minnesota Governor Walz has operated under the Biden political model -- run as a uniter, govern as a divider.

CNN reports that, "when he first ran for governor, his slogan or mantra was called 'ONE Minnesota' and he kept emphasizing the idea that 'I can work across aisles. I can unite people...' but once he got that trifecta, his message shifted to: 'This is what we can do with single party control'."

Like Biden, Walz ignored the voters failure to deliver him a clear policy consensus on climate and energy and pushed through a radical agenda relying on razor thin legislative majorities and shameless executive decrees.

Peter Murphy reports at CFACT.org, that "as governor, Walz imposed electric vehicle mandates by copy-catting California's; forced wind and solar quotas for electricity supply to 80 percent by 2030; and voted as a congressman for 'cap-and-trade' carbon credits that would have crippled American industry with higher costs, lower production and job losses."

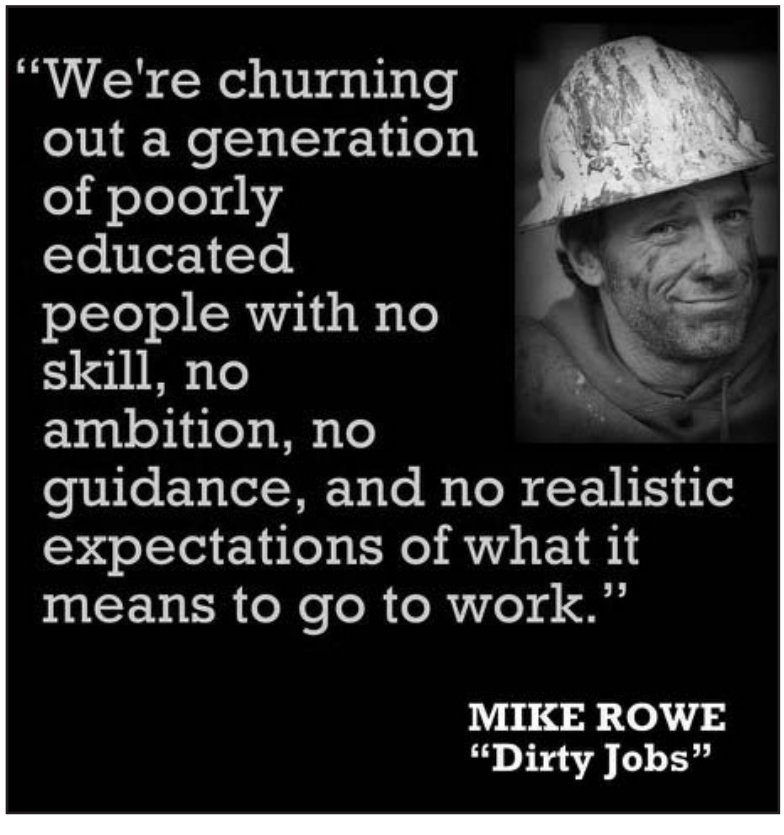
Gabriella Hoffman describes Walz as a "Net-Zero zealot" in the latest hard-hitting podcast she posted to CFACT.org.

Last year Walz signed a law mandating that Minnesotans must limit themselves to 100% "clean energy" by 2040. This requirement places Minnesota squarely alongside California in states whose leadership lacks any grasp of energy, climate and economic realities.

"One person's Socialism is another person's neighborliness," Walz said on a recent Zoom for party activists.

That can't be very reassuring for our neighbors in Venezuela fighting to throw off their Socialist yoke.

How will Americans decide?



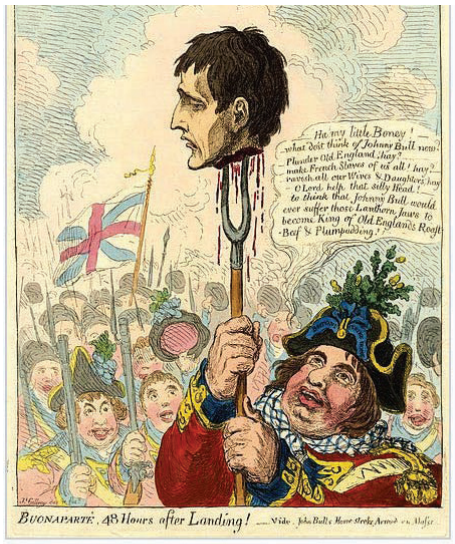
The Pitiful Death of John Bull

By John Leake

For most of my life I believed that England was the cradle of free speech and individual liberty. With its Magna Carta, Common Law, Parliament, and long tradition of free speech—and explicitly defending free speech—going back at least as early as John Milton's pamphlet "Areopagitica," published in 1644, England was long personified as a jolly, good-humored, plain speaking man named John Bull. While people who lived on the European Continent were subjected to royal absolutism, John Bull stood for "English liberty."

In the following cartoon published in 1904 on the occasion of the Entente Cordiale between Britain an France, John Bull is depicted as turning his back on Kaiser Wilhelm II of Germany and walking off with Marianne (who is humorously portrayed as looking like a tart).

The following is a depiction of John Bull in 1803, announcing what he would do to Napoleon Bonaparte "if the Corsican Cut-throat" landed on the British Coast.

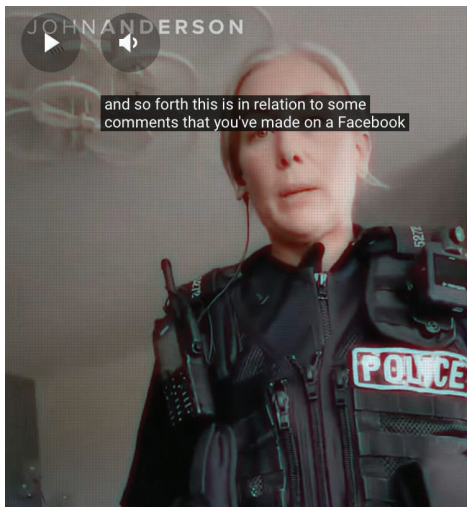


John Bull holds the head of Napoleon Bonaparte in an 1803 caricature by James Gillray.

Lately I've been thinking a lot about John Bull—or more precisely, his pitiful death—as multiple friends have sent me videos of Englishmen being arrested in their homes for the crime of "posting inaccurate information on Facebook."

It's hard to understand how the pitiful death of John Bull came about. Was he spending too much time at the pub watching football matches to notice that he was getting old and would soon die? Or was he too depressed to resist the weirdo tyrants who have hijacked British culture and ruined the cradle of free speech and individual liberty?

I suppose it's possible that this moment has been a long time in the making. I thought



of Matthew Arnold's famous poem "Dover Beach," about a man having a crisis of faith, and was surprised to see that Arnold wrote the first draft in 1851. As he concluded in the final three lines.

And we are here as on a darkling plain
Swept with confused alarms of struggle and flight,
Where ignorant armies clash by night.

The trouble with the British government is that it doesn't believe in anything but power, the ruthless exercise of which it cloaks with benevolent-sounding platitudes about diversity, equity, and inclusion. The British public—most of which doesn't believe in DEI humbug platitudes—has been conditioned to feel powerless and stuck on the hamster wheel of working all the time in order to keep up with inflation.

RIP, John Bull.

Election *cont. from page 1*

lying about us and their track records. I'm told for instance, that Meg Ellefson was talking trash about me on her radio show. I should mention that her radio show is propped up by Robin Vos. I know what the issue is. How dare we challenge these worthless sycophants in the legislature. Suddenly there's no place for primaries. But guess what, perhaps we're done with the primaries. Perhaps we're done with the Republican Party. The Constitution Party of Wisconsin would be glad to have us. Here's a real question for Brian Schimming. Why on earth would I talk someone into NOT going to the Constitution Party? Why on earth would we be part of this party? Would Rejani Raveendran have been better off on the Constitution Party ticket? There is no question about it. However, even after Schimming and the party did everything they could to minimize a hard-working republican candidate, she is going to have a pretty darn good showing! I myself am not a member of the party, but until now, I opposed third party candidates. Kelly Clark is about to show us why that's the avenue we need to pursue!

GONE FISHING! See you in a few weeks!

It is 8:00 on election night, the polls are closed, and we are all waiting for the results. Phase one of the "We've Had Enough – The Conservative Revolt" is over and I have learned more in the past two months than the last two years.

My personal journey began in early 2023 when I decided that I could not just sit by and watch our world be destroyed by tyrants. If we continue to allow Republicans to serve the swamp and not the people, we will be in trouble. And… We are in trouble.

Note: You may want to read the first Substack I have ever sent- from April of 2023 before proceeding.

The swamp will insist that "We the people" need to just fall in

Make No Mistake

cont. from page 1

and international policy positions, priorities and strategies that will guide her Harris-Walz campaign.

Add to this, it's safe to say with national elections only about three months away that relatively few citizens outside of Minnesota are familiar with the political background of current Gov. and former Democratic Congressman Tim Walz either, or on that basis, why Kamala chose him as her running mate.

However, there can be no confusion regarding one overriding common characteristic they share.

They both are far-left socialists.

So let's briefly review what is generally known about Tim Walz that supports his own philosophy which he summed up during the Aug. 6 "White Dudes for Harris" fundraiser call: "Don't ever shy away from our progressive values. One person's socialism is another person's neighborliness."

The Gov. Walz Minnesota Economy:

Although Minnesota boasts a low employment rate (2.9%), nearly all of its job growth under Gov. Walz has been in industries that rely on government spending. Of 41,500 net jobs added since entering office in January 2019, this number includes 43,900 in healthcare and social assistance and 12,600 in government.

Manufacturing employment has declined by 7,500 over the past 12 months, while professional and business services have shed 22,700 jobs. Whereas job losses started before the pandemic, they accelerated during Gov. Walz's prolonged lockdowns and have increased during the last year.

Big Tax and Spend Liberal:

Minnesota job losses have been influenced by a giant tax increase signed by Gov. Walz last spring including a 1% surcharge on investment income over $1 million and reduced standard deductions for businesses such as for net operating losses.

Minnesota already has the fifth-highest top income-tax rate among the states, 9.85% at $193,000 of earnings for a single filer, and is also a rare state in levying a death tax, up to 16%, on top of the federal 40% rate.

Largely, as a consequence, many households representing roughly $5 billion in adjusted gross income left the state between 2019 and 2022, ranking Minnesota eighth in 2022 income loss after Illinois, New York, California, New Jersey, Alaska, Maryland and Massachusetts.

Free Illegal Migrant Health Care and College:

Minnesota, under Gov. Walz, has made an estimated 81,000 illegal immigrants in the state eligible for driver's licenses, along with health insurance through the MinnesotaCare public marketplace.

The state's "North Star Promise Program" provides free college for students with a family income under $80,000," including illegal immigrants.

A School Choice Opponent:

Gov. Walz, a strong teachers' union backer, has not endorsed school choice which Minnesotans overwhelmingly support which gives parents the right to use tax dollars designated for education to send their children to the public or private school that best serves their needs.

Unlimited Abortions:

Minnesota has passed one of the nation's most permissive abortion statutes that has essentially no limits at any stage of pregnancy.

A district court judge last summer declared unconstitutional several restrictions that previous Legislatures had put in place, including a 24-hour waiting period and a parental notification requirement for minors.

Climate-Green Energy Crusader:

Tim Walz is a fervent believer in "climate action" who as governor has mandated that his state's public utilities generate 80% carbon-free electricity by 2030, ramping up to 100% by 2040.

He also supports subsidizing electric vehicle charging infrastructure within or adjacent to new commercial and multi-family buildings.

Recall that the Biden-Harris administration's Infrastructure Investment and Jobs Act passed in 2021 included $7.5 billion to build 500,000 public charging stations across the U.S., although as of April, only eight had been built from that public money.

Constitutional Freedoms:

In March 2020, Minnesota Democratic Gov. Tim Walz's administration implemented a hotline encouraging people to snitch on their neighbors who weren't following the government's COVID lockdown orders. The tattle-tale line remained operational until June 2022.

When asked in Dec. 2022 about penalties for spreading election misinformation, Walz told MSNBC: "There's no guarantee to free speech on misinformation or hate speech, and especially around our democracy."

Recent Gun Control Convert:

Whereas early in his political career when he represented a largely rural district in Congress Walz was a darling of the National Rifle Association, this changed dramatically during his first campaign for governor in 2018 when he began supporting tighter firearm restrictions.

The NRA subsequently downgraded his rating from "A" to "F".

Fiddled While Minneapolis Burned:

Gov. Walz reportedly waited days before calling in the National Guard, allowing anti-police protestors to burn down a police station and cause an estimated $500 million in damage.

The riots were particularly destructive to less affluent neighborhoods where numerous minority business owners lost everything, and V.P. Harris supported cashless bonds for arsonists and looters.

So, why did Kamala pick Tim Walz as her running mate?

Perhaps it's because former Minnesota Gov. Tim Pawlenty was accurate in describing Walz as "philosophically and politically" aligned with Harris, "a sort of Bernie Sanders in hunting gear," essentially "the same product, just in different wrappers."

After all, that's saying a lot since as U.S. senator from 2017 to 2021, Kamala had a more leftist voting record than even socialist Sanders did.

Just maybe she picked him because Kamala and Tim share ideological neighborly socialistic values that would even make Bernie jealous.

"One of the consequences of such notions as 'entitlements' is that people who have contributed nothing to society feel that society owes them something, apparently just for being nice enough to grace us with their presence."

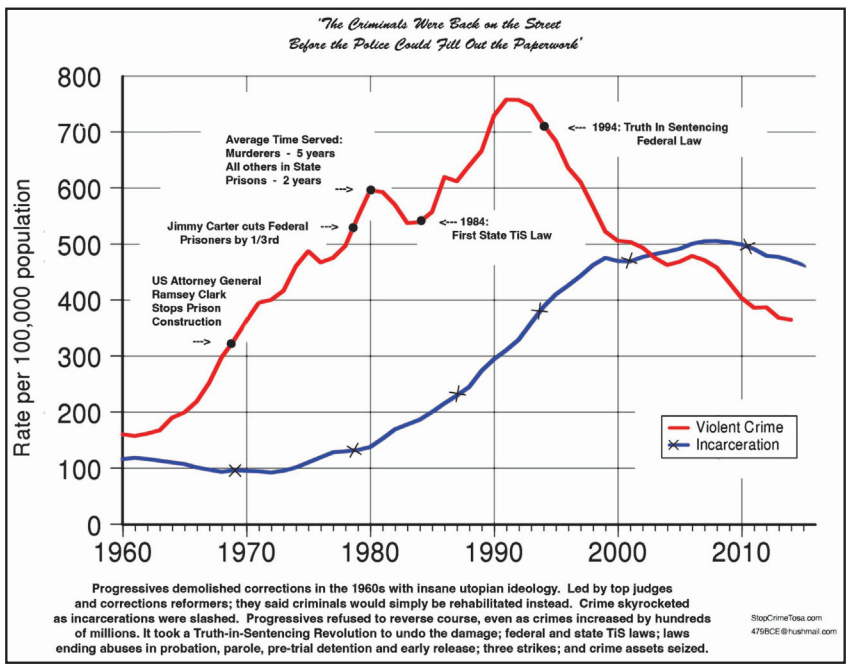
--Thomas Sowell

Mass Incarceration Fiction

By Chris Kemble

Crime fiction was once popular in dime store novels. Today, it is a progressive industry with annual expenditures of $100s of millions. Decades of world-record failure have only seen it become more powerful. The Sentencing Project, Brennan Center, Vera Institute, Prison Policy Initiative, Equal Justice Initiative, and Harvard Institute to End Mass Incarceration are the same people—the anti-prison utopians—who sent crime skyward in the 1960s. These organizations sit at the top. The Sentencing Project alone has links to 76 other national and 220 state organizations. The Vera Institute alone has assets, expenditures, and revenue of $245 million. The goals are the same: to undercut traditional criminal justice, close prisons, and even claim that probation is overly punitive.

The crime tsunami that started in the 1960s is the biggest ever. Judges, law professors, and intellectuals of the day called prisons dehumanizing, vindictive, primitive, and irrational. Supreme Court Justices called for 'behavioral scientists' to rehabilitate criminals. In 'The Myth of Overpunishment', Barry Latzer writes, "From the 1930s to the late 1960s... penal reformers dominated... all states were affected by the drive for more lenient policies... probation instead of prison and parole instead of full-term sentences. In fact many of these leniencies became legal mandates, imposed by activist courts." Time Magazine Vol. 100, Issue 4, reports a Wisconsin governor task force's call to close all prisons, with a federal judge and law professor agreeing. Anti-prison crusader US Attorney General Ramsey Clark, a fixture of the Kennedy/Johnson administrations, blamed society totally; "our inhumanity," and "the sins of generations of selfish neglect." When the line is crossed, Clark lists 28 reasons why the fountainhead is not the actual criminals. Clark called prisons schools for crime, hothouses that only exacerbate problems and counterproductive. In his 1970 book 'Crime



Historic Election is Pro-Western Win

By Chris Kemble

I met Eva Vlaardingerbroek over the summer and told her that global westernism is an oxymoron. She is the spokesperson for the Dutch farmers' resistance, the right arm of the Geert Wilder's coalition in Holland. So I went home and wrote The Myth of Global Westernism. The article is published nine times and can be found at StopCrimeTosa.com. I gave the article to Eva at the Turning Point convention in December.

The globalist elites have been following George Soro's playbook Towards a New World Order since 1993, to disastrous results. In reality outsourcing your sovereignty and self-determination is involuntary servitude to elites with utopian delusions. Geert Wilders is a populist nationalist like Trump, so when he got the most votes in the recent election, it was a big shock in Europe. But nationalists are always excluded from ruling coalitions when the power sharing is worked out. So the shock is bigger now that Wilders has formed a government too!

Wilders is getting the bad press you might expect. The BBC says his '"publicly expressed views … are so provocative that he has been under tight police protection since 2004." But in fact he has endured isolation for 20 years and lived in a government safe house because of threats on his life. Britian once banned him from entering. A Dutch court had convicted him for violating their NewSpeak demands.

Democrats and globalists have appeased Islamists for decades, as required by their DEI cult. They share anti-western ideology. So it is refreshing to see Mr. Wilders push back on the EU fawning over Islamists again. Wilders rebukes the EU for "sincere condolences" for the death of Iranian leaders who are the masterminds of the Oct 7th attacks in Israel and ongoing war in Gaza.

SCOTUS *cont. from page 1*

when making significant changes to a long-standing regulatory policy. Together, these three cases represent a 'Glorious Regulatory Reform Revolution.'

It's crucial to remember, however, that a prior liberal/Progressive SCOTUS created the regulatory powers of the Administrative State. These court-created powers lasted for many decades and greatly diminished Congress's powers to control the Administrative State.

To prevent a return to an all-powerful, court-sanctioned Administrative State, it is imperative that Congress seizes this period of anticipated regulatory sanity to codify and expand the court's decisions. The role of congressional action in preserving this victory cannot be overstated. After being absent from the regulatory reform debate for decades, Congress must now actively protect the benefits of these recent decisions.

The three SCOTUS decisions are excellent examples of how, in the absence of Congress, the federal judiciary can allow regulators to take on the trappings of a "Star Chamber" that can only be dismantled by a future court.

In Loper Bright Enterprises v. The Secretary of Commerce, the court reversed the forty years of deference courts gave to federal agencies under Chevron vs. NRDC. Chevron's legal and economic impact is gargantuan. At the time of the Chevron decision in 1984, the federal bureaucracy had issued approximately 65,000 regulations since the beginning of the Administrative State. After Chevron, the tentacles of the Administrative State expanded to control almost every aspect of society, including the products made, the information provided, and the energy it used. By 2023, the bureaucracy had issued 215,500 regulations costing the economy approximately $2 trillion to implement annually.

The courts dutifully applied Chevron's deference. Seventy future SCOTUS decisions relied upon it, and it was cited in 17,000 lower court decisions. By removing agency deference, SCOTUS returned agency rulemaking power to Congress's original intent, formulated in its Administrative Procedure Act ("APA")—that judges, not bureaucrats, make independent interpretations of the law.

In the second case, SEC vs. Jarkesy, the court struck down the power of federal agencies to act as regulators, judges, and executioners, which could impose substantial civil penalties without providing the defendant's Seventh Amendment right to a jury trial.

While Jarkesy sought judicial review in a federal court, the SEC forced him to adjudicate the matter in-house. The agency's administrative law judge levied a $300,000 fine on Jarkesy and ordered the disgorgement of $685,000 in illicit profits for violations of the anti-fraud provisions in federal securities law. Jarkesy petitioned the Fifth Circuit Court of Appeals for judicial review, arguing that he had the right to a jury trial since the SEC sought penalties. The federal appellate court agreed with Jarkesy.

The Supreme Court upheld the appellate court's finding. It is reasoned that when an agency seeks to impose civil penalties, the action is in the nature of punishment. Since punishment at common law was imposed by courts holding jury trials, Jarkesy was entitled to a jury trial.

The ruling in Jarkesy is significant because federal agencies hire several thousand ALJs to hear evidence and make judicial decisions. These administrative proceedings are very costly to defendants but are more comfortable for agencies since the outcome is determined by their paid-for, in-house "judges."

Loper and Jarkesy build upon WVA v. EPA, the case in which SCOTUS formulated its Major Questions Doctrine requiring an agency to establish statutory authority when transforming long-standing policy into a dramatically new one. EPA historically applied section 111 of the Clean Air Act only to specific energy sources at particular locations. Suddenly, the EPA "discovered new authority" and authorized itself to determine what types of electrical power could be generated and distributed to the nation. SCOTUS found that EPA lacked the statutory authority to transform its facility-by-facility approach to clean air regulation into the power to regulate the entire electricity grid. The critical aspect of its ruling is that when federal agencies suddenly change long-established policies, the agency must prove Congress granted them such authority.

In the three cases, SCOTUS reversed long-established positions that agencies could fill in the legislative blanks in the law, force citizens into trials controlled by agency-paid judges, and unilaterally extend regulatory powers to "newly discovered activities."

The dramatic change in the court's judicial philosophy exhibited a newfound respect for Congress as it searched for its congressional intent or any constitutional support for agency activity

For those familiar with our Constitution and congressionally written laws, it's clear that vagueness is omnipresent in most texts. This understanding should raise concerns about the potential for a future SCOTUS with a liberal/Progressive majority to reverse the current limits. Such a reversal could allow agencies to once again operate as unsupervised lawmakers, thereby potentially making them supreme in the lawmaking process. This potential imbalance underscores the need to preserve the recent SCOTUS decisions.

While conservative Republicans in Congress for decades voiced concerns over the growth of the regulatory state, they could not secure the votes to restrain the system created by the liberal/Progressive SCOTUS.

Only the 115th Congress seriously attempted to reform the APA and, by implication, the Administrative State through the proposed Regulatory Accountability Act ("RAA"). The RAA sought to reform the rulemaking process to ensure final rules were based on sound facts and law, inadequate science could be challenged, major rules were subject to on-the-record hearings with cross-examination, and courts, not regulators, interpreted the law.

The House passed the RAA several times. A Republican Senate even voted it out of committee; however, Senate leadership under Mitch McConnell, a patron of the Administrative State, refused to bring the legislation to the floor. This effort was Congress' first and last serious attempt to reform the Administrative State since its creation in 1946.

In the final analysis, agencies will fight to the last rulemaking proceeding to expand their regulatory powers. The Biden administration recently proved the truth of the assertion by forgiving additional student loan debt after a conservative SCOTUS declared such actions beyond the powers granted to the Executive by Congress. While the current SCOTUS has significantly limited the power of agencies to make new laws without congressional authority, a future liberal/Progressive court could reverse these limits. It is up to Congress to place statutory limitations on an agency's power to make laws without authority from Congress. Such action is necessary if Congress is to reclaim and retain its constitutional role as the nation's sole legislative authority.

Stronger Wisconsin Fund in Hot Water Brandtjen Gets Fake Ballots!! Again!!

It's Tuesday, August 6, 2024 and the Wisconsin biennial budget is still $99,339,385,600.

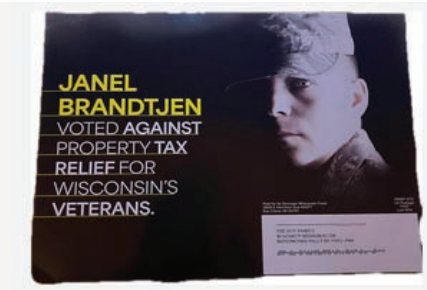
AND… Meagan Wolfe is STILL the administrator of WEC. And the millions of dollars that were illegally funneled to Janet Protasiewicz's campaign still has not been addressed!

A Stronger Wisconsin - In Hot Water

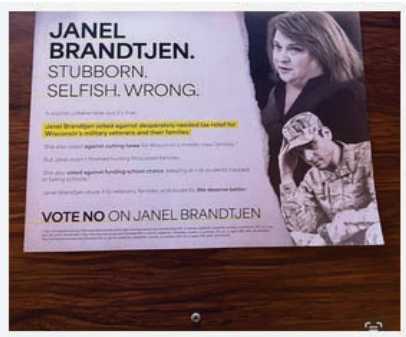
How Low will Knodl Go?

Even with Dan Knodl having 18 years in the legislature, he has to resort to this level of desperation.

NOTE: It appears that Stronger Wisconsin may be in violation of several laws. We have people who are looking into the issues at the time of this writing. We will report further as information is uncovered and verified.



This is False - And may very well land Stronger Wisconsin Fund in hot water!



How low will Knodl go?

A Stronger Wisconsin Is Supporting the Establishment Rino's

And... While Dan Knodl and Rep. Scott Krug Pretend they are Addressing Election Problems... Miltary Absentee Ballots are Still at Risk!

JANEL BRANDTJEN STATE REPRESENTATIVE

WISCONSIN STATE ASSEMBLY 20TH ASSEMBLY DISTRICT

Fake Military Identities in WisVote Despite Fraud Conviction

For more information, contact:
Rep. Brandtjen (414) 915-8425

August 6, 2024

Madison – State Representative Janel Brandtjen issued the following statement today regarding a disturbing discovery of ongoing election fraud:

"While sorting through my mail at home last week, I was surprised to find a piece addressed to 'Holly Adams,' a name unknown to my household. 'Holly Adams' is one of several fictitious military names the Milwaukee Deputy Clerk created to send legitimate ballots to my home. To clarify, a Milwaukee clerk used fake identities to send authentic ballots to my address. Eighteen months after discovering this, I am still receiving mail for the fictitious 'Holly Adams.'

What does this mean? Initially, I thought it was a sick joke, but with the help of individuals who purchased the voter list, I was shocked to learn that "Holly Adams" is voter ID# 701923079. "Holly Brandtjen" is also voter ID# 701923081, and "Holly Jones" is voter ID # 701923080. All these fabricated names are listed in the WisVote system, though inactive and without voting history, but they are being sold to the public on the voter list.

What does this say about the security of our elections? The Wisconsin Elections Commission (WEC) and the three municipal clerks failed to remove these fake military identities even after the Milwaukee Deputy Clerk, Kim Zapata, was found guilty of election fraud.

The presence of these illegitimate military voters in the WisVote system highlights a blatant disregard for maintaining an accurate voter registry. Even though they are inactive and have no voting history, the system can be updated daily. There is no plausible reason for these names to remain on the inactive list after being implicated in election fraud. This negligence fosters distrust in the system, and unfortunately, no one will be held accountable for this incompetence.

It's disappointing that, despite their roles as chairs of the elections committees, Senator Knodl and Representative Krug failed to take action to investigate this significant breach of democracy. They neglected to issue subpoenas or demand accountability for WEC's failure to implement a system that verifies military ballot requests and also complies with existing laws. Although Meagan Wolfe personally committed to removing the fraudulent names from the voter registry, progress remains stalled. Meanwhile, Speaker Vos' continued inefficiency and lack of accountability are allowing this flawed agency to avoid necessary reforms and persist with its serious deficiencies."

Trump *cont. from page 1*

control of both houses, Republicans have the power to legislate the removal of all ineligible voters from the WEC's list.

This would guarantee Wisconsin's elections are verifiable, by removing the source of unverifiable, illegally cast ballots.

It would ensure that only verifiable, eligible voters could participate in our elections.

But the Republicans are leaving Wisconsin's unverifiable elections in place because Donald Trump is a threat to their power and they don't want him to be elected President. Robin Vos has personally made that clear many times.

The Republicans are setting all of us up for an unverifiable, and by definition illegitimate, election on November 5th.

It's critical that people call Robin Vos (608-237-9163), Devin LeMahieu (608-266-2056), and their state representatives to tell them they must immediately legislate the removal of all ineligible voters from the WEC's list. To find out how to contact your representatives go to legis.wi.gov.

Note: All elections are simply a measurement of the will of the people. To get an accurate measurement of anything, you have to have an accurate measuring tool. In the case of elections, that tool is a verifiable list of eligible voters.

Scary fairy tales have replaced sound science; It's time for an accounting

By Kathleen Marquardt

We now live in a world of "truths by proxy" where the global elite determine the truth no matter what the science says. But, of course, the science bookshave been morphed into teaching the science of global warming. What is that? Since Day One, the old science of Copernicus, Archimedes, Newton, Einstein, et al, has been replaced by a politically correct, scientifically corrupt and nonsensical science of rebuilding the earth to self-destruct – but taking out man first.

When the Globalists realized that a New Ice Age wasn't going to fly, that it was too obvious that we weren't going to be wiped out by glaciers, even in the long-distant future, they knew they would have to come up with a somewhat-believable bogeyman. Through the Club of Rome, "In searching for a new enemy to unite us, we came up with the idea that pollution, the threat of global warming, water shortages, famine and the like would fit the bill...All these dangers are caused by human intervention, and it is only through changed attitudes and behavior that they can be overcome. The real enemy then is humanity itself." 1

That was the first step of the Hegelian Dialectic being used to turn modern science upside-down. We no longer fear space aliens because we are told we are the thesis; we are the devil incarnate. So, how do we fix this? Ah, now we get to the anthesis, we must reduce (to a whopping extent) man's existence on this orb. When the population has been reduced by some 90+%, the world will have achieved the thesis, or the solution.

But while many can see that the Globalist/Green plan for Mother Earth is doing the opposite of what we are told it will do. That is, the Montreal Protocol, the Climate Change Plan is destroying the earth and all of its inhabitants, not just us. And the destruction is happening more rapidly as our governments are working toward the thesis stage of Global Climate Change (the model to save the world is destroying it).

To the rescue come some scientists who understand that the Earth was set up to be self-healing, to operate with the tools it came with. In other words, it was fixed before the Globalists took over, thus there was no thesis to fend off. J. Marvin Herndon, and Mark Whiteside have written an academic paper, "Collapse of Earth's Biosphere: A case of Planetary Treason", 2 showing that the Globalist's Climate Plan is the thesis. Look at their case. It is Planetary Treason.

Earth's life support systems are breaking down, including the stratospheric ozone layer, which protects all higher life on the planet from deadly ultraviolet radiation. This breakdown is a direct result of human activities including the large-scale manipulation of processes that affect Earth's climate, otherwise known as geoengineering. We present further evidence that coal fly ash, utilized in tropospheric aerosol geoengineering, is the primary cause of stratospheric ozone depletion, not chlorofluorocarbons, as "decreed" by the Montreal Protocol. The misdiagnosis was a potentially fatal mistake by mankind. … Contrary to the prevailing narrative, the stratospheric ozone layer has already been badly damaged and now increasingly deadly ultraviolet radiation, UVB and UV-C, penetrates to Earth's surface. Our time is short to permanently end all geoengineering activities, and to reduce and/or eliminate all sources of aerosolized coal fly ash" (ed note: Aerosolized coal fly ash comes from the flue gasses of coal-fired furnaces or the fluidized bed of coal and biomass boilers. It's a by-product of burning coal in coal-fired power plants and other industries, and is captured in the stack using filters, electrostatic precipitators, and other air pollution control devices.) 3 "... including first and foremost the jet-sprayed 4 emplacements into the troposphere that are systematically breaking down Earth's support systems and poisoning life on this planet." (Emphasis mine.)

The "misdiagnosis" was deliberate, not a mistake by unsound science. The science was first written correctly, then changed. The scientists with integrity intact, withdrew their names from the document. Richard Benedick, an employee of the State Department, said "A global climate treaty must be implemented even if there is no scientific evidence to back the greenhouse effect". So, it was edited to scare the pants off you.

Dr. Stephen Schneider told a group of scientists, "We have to offer up scary scenarios, make simplified, dramatic statements, and make little mention of any doubts we may have. Each of us has to decide what the right balance is between being effective and being honest." 5

Former Senator Tim Wirth, "Even if the theory of global warming is wrong, we will be doing the right thing — in terms of economic policy and environmental policy".

And, according to Henry Lamb, in his book The Rise of Global Governance,"There is little or no reliable scientific data to support the global warming theory. The theory is based on computer models which the IPCC has revised downward three times since 1990." 6

One more note on the early days of so-called Global Warming (changed to Climate Change when, even with many of the instruments placed in heat-sink areas, there wasn't a perceptible rise in temperatures: in 1995, in Leipzig, Germany, world renown climatologists adopted the Leipzig Declaration stating: …most scientists now accept the fact that actual observations from earth satellites show no climate warming whatsoever). Based on the evidence available to us, we cannot subscribe to the so-called 'scientific consensus' that envisages climate catastrophe." 7

At the Rio Summit in 1992, Principle 15 actually stated that "threats (of Climate Change) do not have to be verified or confirmed, simply declared".How scientific (but it squares with the rest of the Climate Change science).

Back to Planetary Treason, the key:

"DELIBERATE COLLAPSE OF EARTH'S BIOSPHERE Anyone with a deep connection to nature can see how badly the natural world is suffering. Once healthy forests are now dying. Fields and roadsides no longer bustle with insect life and each spring and fall migration brings fewer and fewer birds. The richness and diversity of life on Earth is disappearing at an incredible rate. Beyond the explosion of species extinction, there are massive population declines of both plants and animals with cascading effects on ecosystems necessary for our continued existence. Human activities have destroyed over two-thirds of the world's wildlife in just the past fifty years and there is no end in sight. Few scientists have found the courage to sound the alarm about our dire situation. And far fewer realize that much of our current environmental crisis is deliberately caused. Science appropriately applied has the potential to improve life on Earth. But for decades Earth science has been twisted and defiled, used as a tool to disrupt natural processes on a global scale, to destroy life, and to deceive humanity. Here we disclose the causal commonality underlying the collapse of the biosphere which, we submit, constitutes no less than Planetary Treason."

The major culprits:

"The United Nations has been at the forefront of activities related to the destruction of Earth's natural environment and the collapse of the biosphere. The 1978 United Nations' "Convention on the Prohibition of Military or Any Other Hostile Use of Environmental Modification Techniques" [ENMOD], as we revealed, obligates signatory nations to fundamentally compromise their own sovereignty and to bring about widespread, permanent agricultural devastation. Instead of prohibiting "Hostile Use of Environmental Modification Techniques", as its title suggests, ENMOD obligates signatory nations to participate in unspecified

Directing War *cont. from page 1*

sausages made from lake flies, for instance. Fixing the WEF's toxic workplace is apparently a low priority.

A UN Food and Agriculture Organization report advises that turning "edible insects" into "tasty" food products can create thriving local businesses and even promote "inclusion of women."

Created to alleviate global poverty, the World Bank has decided the "manmade climate crisis" is a far greater threat to impoverished families than contaminated water, malaria and other killer diseases, hunger, or even two billion people still burning wood and dung because they don't have reliable, affordable electricity. It has unilaterally decreed that 45% of its funds – an extra $9 billion in FY2024 – will be shifted to helping the poor "better withstand the devastation of climate change."

(The Bank has also decided that even more of its taxpayer funding – $300-million instead of "only" $70-million – should be gifted to the Palestinian Authority, which pays terrorists to murder Israelis.)

Of course, most of the better and lesser-known environmental pressure groups are also deeply involved in food, agriculture and energy policy campaigns: Greenpeace, Sierra Club, EarthJustice, Friends of the Earth, Pesticide Action Network, Center for Food Safety, La Via Campesina (The Peasant Way), Alliance for Food Sovereignty in Africa, and countless others.

Like the rest of the "agro-ecology" movement, they deride and malign modern agriculture as a scourge inflicted by greedy mega-corporations. They oppose fossil fuels, pesticides, herbicides and biotechnology. They extol "food sovereignty" and the "right to choose." But their policies reflect top-down tyranny and bullying, with little room for poor farmers to embrace modern agricultural technologies and practices.

In addition to WEF, FAO and World Bank support, these hard-green organizations have the ideological, organizational and financial backing of the US Agency for International Development, EU agencies, and a host of progressive and far-left American, European and other foundations.

The US-based AgroEcology Fund was created by the Christensen Fund, New Fields Foundation and Swift Foundation. Its funding and programs are overseen by the New Venture Fund, which helps "charitable" and "educational" organizations direct funds to programs that align with what many characterize as neo-colonialist and eco-imperialist goals.

Other major players include the Schmidt Family Foundation, Packard Foundation, Ford Foundation, Charles Stewart Mott Foundation, and Ben and Jerry Foundation.

This is serious money – hundreds of millions of dollars per year in food, agriculture and climate change funding. It completely overshadows the piddling $9,000 that Kenyan farmer Jusper Machogu raised via donations to his "climate realism" website – much of it given to neighbors, so they could drill water wells, buy tanks of propane or get connected to the local grid.

And yet Mr. Machogu incurred the wrath of the BBC's "Climate Disinformation Officer." (Yes, the Beeb actually has such a position.) The CDO attacked him for "tweeting false and misleading claims" about climate change and saying Africa should develop its oil, gas and coal reserves – instead of relying entirely on intermittent, weather-dependent wind and solar. Even worse, the farmer had the temerity to accept donations from non-Africans, including "individuals with links to the fossil fuel industry and groups known for promoting climate change denial."

Rockefeller Philanthropy Advisors is another major donor to agro-ecology outfits. It's part of the legacy of guilt-ridden oil money from John D. Rockefeller's Standard Oil Co. corporate trust – an inheritance that includes nearly 1,000 climate-related institutions, foundations and activist organizations.

As Canada's Frontier Centre put it, "Every time you hear a 'climate change' scare story, [the person writing it] was PAID. He is a Rockefeller stooge. He may not know it, but his profession has been entirely corrupted." Far worse, I would add, the writer and his (or her) organization are complicit in perpetuating global poverty, energy deprivation, hunger, disease and death – because the fearmongering drives destructive energy and food production policies.

Alone or collectively, these policy corrupters must not be underestimated in this war to preserve and expand modern energy, agriculture and global nutrition. Thankfully, there is increasing pushback. Many families simply do not want to be trapped in poverty, disease, mud-and-thatch huts, an absence of educational opportunities for their children, and a future of backbreaking, dawn-to-dusk labor in little subsistence-farming fields.

That's especially so when films, news stories and cell phones present American and European farming equipment and practices – and the crop yields, wealth, health, homes, leisure time and opportunities that accompany those modern agricultural systems.

Poor farmers also see China, India, Indonesia and other countries rapidly industrializing and modernizing by using oil, gas and coal. They see rumblings of change in many countries that are intent on charting their own courses, with fossil fuels as the energy foundation for that growth. They're rejecting the eco-colonialism and eco-imperialism that wealthy Westerners seek to impose on them.

They are getting the message that humanity has faced climate fluctuations and extreme weather events throughout history ... and survived them, dealt with them, adapted to them, prospered. That there is no real-world evidence that manmade greenhouse gas emissions – especially the trivial amounts generated by agriculture – have replaced the powerful natural forces that caused past climate changes.

They increasingly realize that organic and subsistence farming requires vastly more land – which would otherwise be wildlife habitats – than modern mechanized farming, to get the same yields. Plowing those habitats would decimate plant and animal diversity.

That locking up fossil fuels, and relying instead on biofuels and plant-based feed stocks for thousands of essential products, would require even more acreage. So would mining for massive amounts of metals and minerals to manufacture wind, solar and battery technologies.

Most importantly, they understand that humanity today has far greater wealth, far more knowledge, far better technologies and resources than any past generations.

To suggest that we cannot adapt to climate changes, or survive and recover from extreme weather events, is simply absurd. To suggest that farmers should revert to ... or remain stuck in ... ancient farming practices and technologies – to save the world from computer-generated manmade climate disasters – is eco-imperialism at its most lethal.

South Africa's electricity minister recently said his country will not be "turned into a guinea pig for a worldwide Green New Deal." Hopefully, all developing countries will soon apply that same attitude to anarchists who would use the world's poor as guinea pigs in global agricultural and nutrition experiments.

Paul Driessen is senior policy analyst for the Committee For A Constructive Tomorrow (www.CFACT.org) and author of books and articles on energy, environment, climate and human rights issues.

Waging war on modern agriculture and global nutrition

By Paul Dreissen

Demands for organic or subsistence farming worldwide would devastate nature and nutrition

The World Economic Forum says the world faces a new crisis, "One-third of anthropogenic greenhouse gas emissions come from food production." With the world's population expected to reach 10 billion people by 2050, it is therefore "urgent" that we launch a "radical" and "comprehensive" transformation of the global food system – from "reinventing" farming to "reimagining" how food is produced, processed, distributed, consumed and disposed of.

Reinforcing this message, Stop Ecocide Now founder Jojo Mehta expanded on Greta Thunberg's incendiary 2020 rant that "our house is on fire and you're fueling the flames." Farming is a "serious crime," equal to "genocide," Ms. Mehta told elites at the 2024 WEF meeting in Davos.

Their grasp of agriculture is epitomized by Michael Bloomberg's suggestion that anybody can be a farmer: "You dig a hole, you put a seed in, you put dirt on top, you add water, up comes the corn."

Modern farming and its supposedly dangerous greenhouse gas emissions are a tad more complicated.

Modern mechanized farming employs oil derivatives as fuel for equipment and feed stocks for herbicides and pesticides, natural gas to dry grain and make fertilizers, and livestock to provide protein.

Tractors, trucks, farmers and livestock emit carbon dioxide, adding to the 0.04% of CO2 in Earth's atmosphere (equivalent to $40 of $100,000). Cattle emissions add methane to the existing 0.0002% CH4 in the atmosphere (20¢ of $100,000). Nitrogen fertilizers add to the "dramatic" 200-year rise in atmospheric nitrous oxide (N2O), bringing it to a still minuscule 0.00003% (that's 3¢ of $100,000).

These emissions allegedly drive "cataclysmic" climate change and extreme weather, endangering all life on Earth. But then what caused five Ice Ages (including the Pleistocene Era and its mile-high glaciers, which ended 12,000 years ago), the Roman and Medieval Warm Periods, and the Little Ice Age (1350-1850) to come and go?

Of course, natural forces can't drive climate hysteria and WEF-Gore-Biden anti-fossil-fuel agendas. Fear-mongering political, activist, media and academic elites therefore ignore them.

In the Real World, the wondrous reality is that, after centuries of excruciatingly slow progress, agricultural advances over the past 75 years have been nothing short of astonishing. Dr. Norman Borlaug's Green Revolution employed plant breeding techniques that multiplied yields of vital grain crops, saving hundreds of millions of lives.

Since 1950, American farmers increased per-acre corn yields by an incredible 500% and other crop yields by smaller but still amazing amounts – while using used less land, water and fuel ... and fewer fertilizers and pesticides per ton of produce. Their exports helped slash global hunger and malnutrition even further.

Meanwhile, despite supposed impacts from manmade climate change, farmers in Brazil, India and many other countries have also enjoyed record harvests.

Multiple miracle technologies contributed. Hybrid seeds combine valuable traits from different related plants. Biotech seeds protect crops against voracious insects and destructive viruses, while reducing water and pesticide demand. Virus-resistant biotech cultivars have even replaced endangered papayas in Hawaii, cassava and bananas in Africa, and other crops.

Nitrogen (ammonia) fertilizers, synthesized from natural gas and atmospheric nitrogen, have joined phosphorus and potassium in supercharging soils. Increased atmospheric carbon dioxide spurs plant growth and reduces water demand even further.

Long-lasting herbicides control weeds that would otherwise steal moisture and nutrients from crops – and enable farmers to utilize no-till farming that avoids breaking up soils, reduces erosion, retains soil moisture and preserves vital soil organisms.

Technologies developed in Israel make it possible to grow an amazing array of crops in the Negev and Arava Deserts, which receive a fraction of the annual rainfall that Arizona gets. Desalination plants turn seawater into 80% of Israel's drinking water, dramatically reducing pressure on the Sea of Galilee, manmade reservoirs and groundwater supplies.

Israelis then recycle 90% of their home, business, school and hospital water – for use in agriculture, where drip irrigation delivers precise amounts of water precisely where crops and other plants need it, minimizing evaporation.

Huge high-tech tractors use GPS systems, sensors and other equipment to steer precise courses across fields, while constantly measuring soil composition, and injecting just the right kinds and amounts of fertilizers and herbicides, along with seeds, to ensure optimal harvests.

Not all these technologies are available across the globe. However, farmer can access information about both the technologies and the modern practices through online libraries and programs on cell phones.

Instead, this progress is under assault – by ill-advised or ill-intended, but well-funded organizations that want to turn the Green Revolution into Green Tyranny, Eco-Imperialism and global malnutrition.

Their hatred of biotech crops is intense and well-documented. But many also despise hybrid seeds. They want modern herbicides and insecticides banned, in favor of "natural" alternatives – which are often toxic to bees, fish, other animals and people and have not been tested for long-term harm to humans.

These agricultural anarchists also demand "natural" fertilizers, which typically provide a fraction of the nutrients that modern synthetic fertilizers do. At the very least, they want global organic farming, which would mean much lower crop yields per acre than conventional farming, and plowing many millions of additional acres of wildlife habitat and scenic land, to get the same amounts of food.

They say people in Africa, Asia and Latin America should practice subsistence farming – which they prefer to call "traditional" farming, Agro-Ecology, "food sovereignty," or the "right to choose" "culturally appropriate" food produced through "ecologically sound and sustainable methods," based on "indigenous agricultural knowledge and practices."

In plain English, Agro-Ecology is rabidly opposed to biotechnology, monoculture farming, non-organic fertilizers, chemical pesticides, and even mechanized equipment and hybrid seeds.

You can imagine how Agro-Ecologists would react if African farmers wanted to assert their food sovereignty, self-determination and right to choose by planting biotech Bt corn, to get higher yields, reduce pesticide use, enjoy better living standards and send their kids to school. The agro-anarchists would vilify them as vile supporters of violence against women, land-grabbing corporations,

Our Mission...

At the heart of CFACT, our goal is to enhance the fruitfulness of the earth and all of its inhabitants. CFACT accomplishes this through four main strategies:

Prospering Lives. CFACT works to help people find better ways to provide for food, water, energy and other essential human services.

Promoting Progress. CFACT advocates the use of safe, affordable technologies and the pursuit of economic policies that reduce pollution and waste, and maximize the use of resources.

Protecting the Earth. CFACT helps protect the earth through wise stewardship of the land and its wildlife.

Providing Education. CFACT educates various sectors of the public about important facts and practical solutions regarding environmental concerns.

Shattered wind turbine closes Nantucket beaches feds suspend Vineyard Wind

By Craig Rucker

A massive wind turbine blade shattered causing an extensive debris field which shut down beaches on tony Nantucket Island.

As workers in protective clothing resembling hazmat suits rushed to contain the damage, "the federal Bureau of Safety and Environmental Enforcement said Wednesday that operations at Vineyard Wind have been suspended until it can be determined whether the 'blade failure' impacts other turbine blades on the development," according to The Associated Press.

Check out the photos above which were taken by whale protection activist Mary Chalke.

The Vineyard Gazette reports that Vineyard Wind is, "the first approved and currently largest offshore wind energy project in the country... The Vineyard Wind turbines are over 800 feet tall, with blades as long as a football field. As of last month, Vineyard Wind had 10 turbines in operation, generating about 136 megawatts of power. About a dozen more were under construction. The turbines are manufactured by GE Vernova and the company is responsible for them as they are initially installed."

GE Vernova stock plummeted 9.3% following the federal order to suspend operations.

A GE Vernova turbine blade failed at the U.K.'s massive Dogger Bank wind installation this spring, and another broke several blades in Germany this fall.

Last month America Electric Power filed suit against GE Vernova over quality and warranty concerns alleging that "within only two to three years of commercial operation, the GE wind turbine generators have exhibited numerous material defects on major components and experienced several complete failures, at least one turbine blade liberation event, and other deficiencies."

Wind turbine blades are made from fiberglass, or fiber reinforced plastic, and cannot be recycled. CFACT has yet to see any serious proposal as to what to do with the mountain of waste which will result when thousands of turbine blades reach the end of their useful lives in 10-20 years.

CFACT has actively challenged the Biden Administration's rush to transform America's coasts into industrial wind turbine sites focusing on the threat they pose to marine mammals, the power grid, and the economic hazards of mining rare earths and other materials in developing nations.

Our federal "watchdogs" should call a halt to wind turbine construction until the potential hazards they pose to the Jersey Shore, the Virginia coast and the rest of our national waters are genuinely understood.

Beautiful Nantucket Island and neighboring Martha's Vineyard are the chosen summer playgrounds of America's rich and famous, including Barack and Michelle Obama.

Florida Governor Ron DeSantis quipped last night that the wealthy Left, "support open borders allowing millions and millions of illegal aliens to pour into our country and to burden our communities, but just don't send any to Martha's Vineyard then they get really upset."

Let's see how the beautiful people, who have been so vociferous in pushing wind and solar on the rest of us, enjoy picking fiberglass shards out of their beach picnics.

Nantucket's wind turbine nightmare

By Craig Rucker

Nantucket islanders are up in arms!

CFACT recently reported on the gargantuan wind turbine blade that shattered off Nantucket and littered the island's beaches with fiberglass debris.

CFACT's Gabriella Hoffman interviewed women fighting to protect people and whales from offshore wind and posted their opinions as to "why ocean industrialization is harmful to conservation efforts" to CFACT.org.She taps Bonnie Brady and Meghan Lapp, two commercial fishing industry activists and Big Wind opponents, to deconstruct what's happening and why ocean industrialization is harmful to conservation efforts.

Meghan Lapp recently explained that "Vineyard Wind stands as the first large scale wind project ever approved in federal waters in the history of the United States, this project will set the precedent for every other wind project being planned on every coast in this country, forever changing the future of our oceans. Once these projects are in, there's no going back."

Bonnie Brady said that the Nantucket wind "project's pile driving and jet plowing for hundreds of miles will destroy an area that is not only highly productive for commercial fishermen feeding the nation the bounty of our ocean, but could destroy the area for the fish, and the other mammals (not us!) that feed on them... I wake up every day believing we will stop this project, for the ocean and its life above and below the water line."

Offshore wind is a tragic mistake. Wind turbines stand to spoil our beautiful coasts, pose a severe potential hazard to whales and other marine mammals, and will burden our fisheries.

To top it all off, wind turbines are a horrifically expensive and inefficient way to generate electricity!

CFACT model legislation headed to the states

By Craig Rucker

CFACT's three "model bills" cleared a big hurdle at a recent American Legislative Exchange Council meeting in Denver.

The three bills — designed to strengthen grid reliability, protect ratepayers, and discourage land grabs by big companies and foreign governments – each cleared the Environment, Energy, and Agriculture Task Force committee with strong support and now move to final (and likely) approval. Model bills are important as they are sent, after approval by ALEC, to conservative and libertarian-leaning legislators in all 50 states to be considered for submission in their legislative bodies.

Former Wisconsin legislator Frank Lasee, who crafted the three model bills along with CFACT President Craig Rucker, was well pleased with the outcome. "We expected there to be a little pushback on one or two of them, and there was. But in the end, all of our bills received strong support, and we were definitely pleased with the outcome," said Lasee.

The first CFACT model bill was introduced by South Dakota representative Julie Auch and titled the "Natural Asset Company Prohibition Act". It was designed to stop companies (some foreign, including China) from profiting through the purchase and locking up U.S. lands for no meaningful purpose other than to stop farming, ranching, or resource extraction. The Securities and Exchange Commission toyed with the idea of listing NACs on the New York Stock Exchange last fall. However, their action created a firestorm led by the CFACT's ally, the American Stewards for Liberty, which forced the SEC to withdraw its proposal. CFACT's "Natural Asset Company Prohibition Act", if ultimately adopted by numerous states, will serve as a disincentive to create and operate such NACs in important regions of the USA.

The second CFACT model bill champions the creation of a "consumer advocate" to represent ratepayer interests at Public Service (Utility) meetings in various states. Dubbed the Ratepayer Affordability and Reliability Advocacy Act, this bill was introduced by Representatives Jeanine Notter and Michael Vos of New Hampshire and received unanimous support from ALEC attendees. Many states already have such a consumer advocacy board, often called a CUB (Citizens Utility Board), but the bill has become necessary because many of these CUBs have become co-opted by climate activists who seek to promote political rather than ratepayer interests. CFACT's model bill focuses a consumer advocate's responsibility down to one purpose: To secure for utility customers the most reliable source of electricity at the cheapest price.

The third model bill, entitled Truth in Electricity Generation Labeling Act and introduced by Jack Colin of Utah, seeks to provide "Truth in Labeling" to power generation facilities. This has become important because, in many instances, renewable power facilities "sell" themselves as being able to provide 100 MW or so of electricity but, in actuality, only deliver about a quarter to a third of that amount in the real world. This bill would require them — as well as nuclear, coal, natural gas, and hydro units — to showcase not just their peak performance capabilities but also how much of the time purchasers can expect they will produce no output whatsoever.

CFACT is honored to provide legislators with the research and drafting they need to bring sound energy policy to their states.

Vaccine Cheerleader

cont. from page 1

pediatric conference that took place in Colombia, but the interview then jumped onto X.

The Simposio Internacional de Actualización en Pediatría (International Symposium of Pediatric Updates) later removed the interview from YouTubealthough photos can still be found on Facebook.

In clips of Hotez's interview that continue to circulate on X, he claims "anti-vaxxers" caused hundreds of thousands of deaths in the United States. I uploaded one clip to my YouTube channel which you can watch here:

What I've said to the Biden administration is, the health sector can't solve this on its own. We're going to have to bring in Homeland Security, the Commerce Department, Justice Department to help us understand how to do this.

I've said the same with … I met with [WHO general director] Dr. Tedros last month … to say, I don't know that the World Health Organization can solve this on our own. We need the other United Nations agencies—NATO. This is a security problem, because it's no longer a theoretical construct or some arcane academic exercise. Two hundred thousand Americans died because of anti-vaccine aggression, anti-science aggression.

And so, this is now a lethal force … and now I feel as a pediatric vaccine scientist … it's important, just as important for me to make new vaccines, to save lives. The other side of saving lives is countering this anti-vaccine aggression.

Hotez has long been noted for promoting controversial and sometimes false statement about the COVID pandemic and then accusing his critics of "anti-science."

But this is not the first time Hotez has called for police to deploy against those who disagree with his views on science. Last October, Scientific American platformed Hotez as an expert on "anti-science" and didn't bat an eyelid when he said support for scientists would require intervention by the Department of Homeland Security and the creation of a federal interagency task force.

Dr. Hotez again called for deploying federal police to support science during a grand rounds lecture he gave in August 2021. A whistleblower at Texas Children's Hospital sent me the lecture where Hotez said the "disinformation empire" threatened America and would need to dealt with by the Department of Homeland Security:

The problem is the disinformation empire is so vast and pervasive that until we do something more definitive to get to the source of the disinformation and stop it, it's not going to have that much of an impact. And that's where everybody moves away from me.

And I tend to be out on a … out on my own here.

Earlier this year, Time Magazine named Hotez a "Science Warrior" and one of the 100 most influential people in global health.

Waging War

cont. from page 14

expropriation of indigenous rights, genocide and other "crimes against humanity."

They also promote "alternative protein." They say Africa would be "the perfect laboratory" for testing new foods – such as "crackers, muffins, meat loaves and sausages" made from lake flies. In fact, the UN Food and Agriculture Organization (FAO), Popular Science magazine and many other outfits extol the virtues of "entomophagy" – the clever progressive term for eating bug burgers, instead of hamburgers.

They even offer recipes and techniques for processing "edible insects" into tasty, nutritious products that can improve diets and livelihoods, create thriving local businesses, and even promote inclusion of women. In fact, they say, bugs can have twice as much protein per pound as beef; grasshoppers, locusts, crickets, beetles, ants and cicadas make great snacks, desserts, guacamole and even entire meals; and mealworms have "an earthy flavor, similar to mushrooms," making them excellent additions to brownies. Sautéed with a little salt, mealworms also make "protein-boosted potato chips." Yummy!

Who are these guys – these agriculture and nutrition anarchists and revolutionaries? Stay tuned.

Paul Driessen is senior policy advisor for the Committee For A Constructive Tomorrow (www.CFACT.org) and author of books and articles on energy, climate change, environmental policy and human rights.

Election

cont. from page 9

line with the party and allow ourselves to be gaslighted by a speaker that has managed to lower his approval rating to 14%. Leadership by ANY definition does not allow for a 14% approval rating.

We supported about twenty-eight candidates this time around. Some were quite prepared, others got into the game late. Many had their own support groups behind them, others struggled. The purpose was to bring change and win or lose we did just that. As my Substack points out, legislators from here on out will either have to keep their promises or defend their seats. Isn't that the way it should be?

I stated repeatedly that these people are not representing you, the people. They work for Robin Vos. I told you they were not honest, and they spent $450K proving it. Legislators ran from their records and resorted to nasty attack ads that in the end will prove to be their undoing. County Parties violated rules and the trust of their members. Washington County, and others, openly violated party rules, no surprise there.

The natural advantage that an incumbent has, a record of service, name recognition, and a seasoned campaign staff, were not enough for these desperate despots. They could not run on their records, so they resorted to the Vos-like tactics of deception. They lied, they twisted and the distorted the truth in order to win. Not just the candidates themselves, but by dark money organizations funded and controlled by the Republican Party of Wisconsin, RACC and Robin Vos himself.

Be forewarned, the Wisconsin Conservative Digest is NOT going away. We are just now finding our wings and we will be a force to be reckoned with in the months and years to follow.

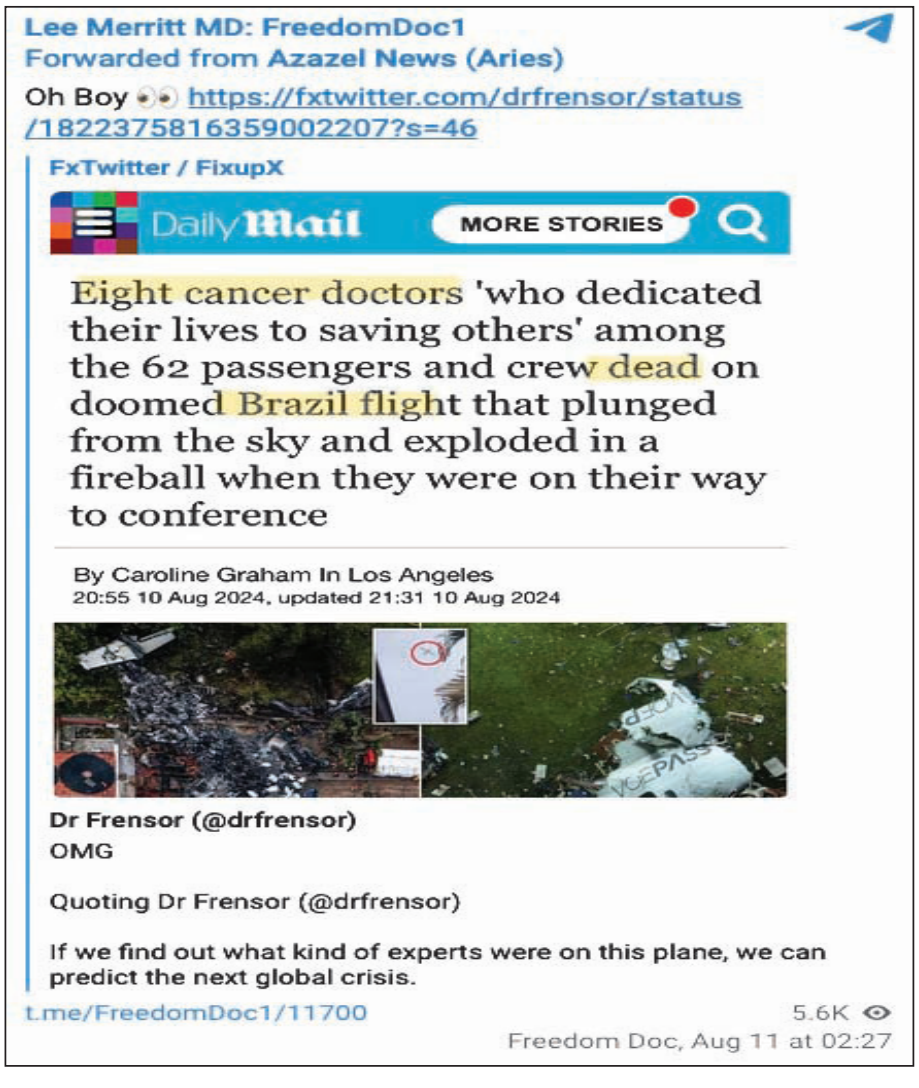
Bill Savage – Editor,
The Wisconsin Conservative Digest. –

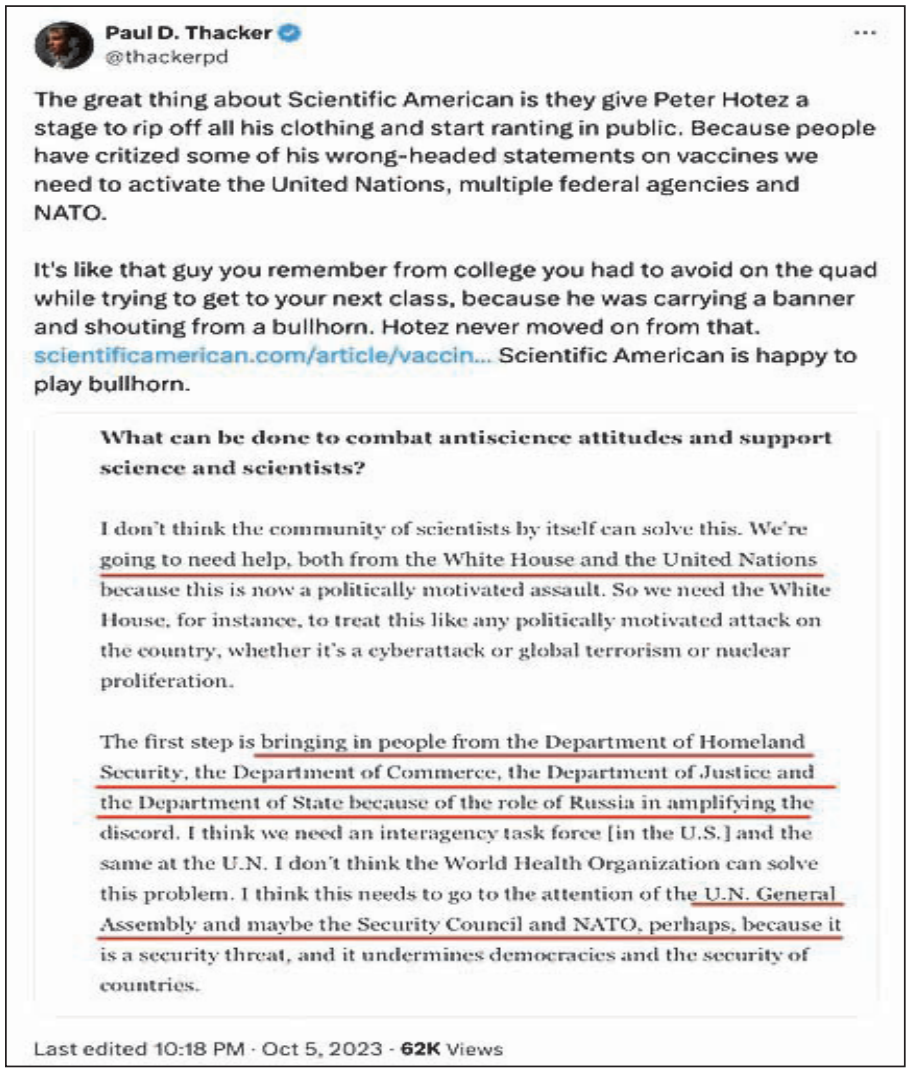
PS - See you all in the 33rd Assembly District! We have work to do!!!

Note from Bill Savage - As we get rolling into the Autumn campaign season, please consider contributing to my Substack. All monies will go to my "We've Had Enough" Project. We need Republicans who act like Republicans in the legislature! There is a $50 option and a $240 Charter Member option!

Thank you!!

Bill Savage is a former Chief of Staff in the Wisconsin State Capitol. Current editor of the Wisconsin Conservative Digest and author of Savagespeaks.Substack.com.





Meta-Analysis Finds Massive Failure of COVID-19 Vaccines to Stop SARS-CoV-2

By Peter A McCullough, MD, MPH

Virtually every vaccinated person I meet has contracted COVID-19. Many still believe vaccination was worth the risk because they did not end up in the hospital in 2021 through the present day. Vaccine-takers tended to be younger working age individuals who were mandated by work or school, and therefore healthier than those not forced into taking the jab. In my practice, the senior citizens who took the vaccine tended to be healthier and far more worried about COVID-19. They were the first to get early treatment for the illness. Finally, we all saw COVID-19 illness become far milder on the second, third, and fourth infections because of natural immunity as we were faced with milder strains. So in the midst of this confounded set of relationships, how did the COVID-19 vaccines perform?

Wu et al, published a meta-analysis of 68 studies evaluating efficacy of COVID-19 vaccination. Keep in mind only favorable studies were accepted by editors. The results indicate a stunning failure of vaccination. Because the data are not from high-quality, prospective, double-blind, placebo-controlled, randomized trials, and publication bias, we must be conservative and consider the lower-bound of the confidence interval as the statistic of interest. This means that vaccine performance could be as bad as that number.

Wu N, Joyal-Desmarais K, Ribeiro PAB, Vieira AM, Stojanovic J, Sanuade C, Yip D, Bacon SL. Long-term effectiveness of COVID-19 vaccines against infections, hospitalisations, and mortality in adults: findings from a rapid living systematic evidence synthesis and meta-analysis up to December, 2022. Lancet Respir Med. 2023 May;11(5):439-452. doi: 10.1016/S2213-2600(23)00015-2. Epub 2023 Feb 10. PMID: 36780914; PMCID: PMC9917454.

As you can see, most lower bounds are near or below zero at 168-195 days! That means just a few months after the shot, there is no detectable benefit even in the most biased studies. Hospitalization and death as an outcome must be considerably discounted since there was not control for early treatment, natural immunity, and progressively milder strains before Omicron. After Omicron, there is no benefit whatsoever for vaccination for the occurrence of SARS-CoV-2 or hospitalization/death.

Long-term effectiveness of COVID-19 vaccines against infections, hospitalisations, and mortality in adults: findings from a rapid living systematic evidence synthesis and meta-analysis up to December, 2022

Carbon Dioxide *cont. from page 3*

fight against climate change. Summit says the annual CO2 emissions savings will be equal to removing 3.9 million vehicles from our roads. But the project is fraught with feasibility and cost, environmental and safety problems.

The feasibility and cost track record of CO2 capture is poor. There are 47 major carbon dioxide capture and storage (CCS) plants operating in the world today, and most are money losers even with heavy subsidies. Ethanol plants that pursue CCS will likely lose money, along with the taxpayers who provide the subsidies.

For example, the Quest CCS project operated by Shell in Alberta, Canada captures only 35% of the CO2 emitted from a chemical process to upgrade bitumen from oil sands. The capital cost of the project is $811 million, entirely paid for with C$865 million in grants from the Canadian and Alberta governments. The Quest CCS operation will cost $41 million a year to run with only $27 million per year offset in payments from carbon credit subsidies.

The environmental benefits from the Summit project will be tiny. CO2 captured from Midwest ethanol plants will do little to affect global temperatures. Today, all of the world's operating CCS facilities capture only 0.1 percent of industrial emissions. Even the Sierra Club opposes the Summit pipeline and calls CCS efforts "false climate solutions."

Carbon dioxide pipelines come with huge safety issues. Only about 5,000 miles of CO2 pipelines exist in the US, compared to 84,000 miles of crude oil pipelines and three million miles for natural gas. Most CO2 pipelines transport liquified CO2 short distances to oil fields where it is pumped underground to force oil and gas to the surface.

Carbon dioxide in pipelines is a liquid under high pressure. If it leaks, it turns to gas as it rushes out. Since it is heavier than air, it stays close to the ground and can cover wide areas. Carbon dioxide is harmless in small quantities, but in large amounts, it is an asphyxiate, can force oxygen out of people's lungs, and can cause headaches, dizziness, serious injuries, and death.

On February 22, 2020, a carbon dioxide pipeline ruptured in Sartaria, Mississippi. The rupture occurred on a Saturday and spewed CO2 for about four hours. An invisible cloud of CO2 moved through the rural community forcing more than 200 people to evacuate and at least 45 to be hospitalized. Victims were unable to breathe and suffered unconsciousness and fits of shaking. No one died during the incident, but some victims continue to suffer ongoing physical problems.

As a result of feasibility and safety concerns, opposition to the pipeline is growing. Proponents and opponents battle in state legislatures and at public utility meetings. Counties in all five states have recently passed bans or restrictions on CO2 pipelines.

North Dakota regulators denied Summit's application last August but have agreed to reconsider. Last month, Illinois passed a bill putting CO2 pipeline construction on hold until 2026. South Dakota regulators denied Summit's application last September, but the legislature passed a package of regulations earlier this year that may aid approval of the pipeline network. South Dakota voters will have an opportunity to reject that package of regulations on this year's November 5 ballot.

The Summit pipeline project would not exist without vast federal subsidies for CCS. We have plenty of CO2 for soft drinks and other uses. Huge subsidies, driven by the fear of human-caused global warming, are the only reason to try to seize land from farmers in Midwest states.

Even if this huge pipeline system is built and CO2 is captured at 57 ethanol plants, the effect on global emissions will be insignificant and the effect on global temperatures will not be measurable.

Land for pipelines is not the only case where land is being seized to promote green energy. The US Department of Energy recently announced plans to use eminent domain to seize land across wide areas to build transmission towers for new wind and solar systems. Illinois and Michigan passed laws blocking restrictions and outright bans by local communities on the deployment of wind and solar systems. Governments consider the fight against human-caused climate change more important than the property rights of citizens.

Steve Goreham is a speaker on energy, the environment, and public policy and the author of the bestselling book Green Breakdown: The Coming Renewable Energy Failure.

Bishop Strickland: The Church is meant to save souls, not provide a 'false peace' to the world

By LifeSite News

On this week's two-part episode of The Bishop Strickland Show, Bishop Joseph Strickland discusses the Transfiguration of Our Lord, the blasphemy at the Olympic opening ceremony, how faith in the Lord saves us, a letter he wrote about staying faithful to the Church despite infiltration, and more.

Strickland begins the first part of the episode by offering commentary on Mark 9:2-10, in which Our Lord transfigured before Peter, James, and John on a mountain, with Moses and Elijah appearing beside Him.

The bishop noted that when looking at this Gospel passage, it's important to reflect that Jesus showed these three apostles a glimpse of what He's always been, namely God, even after becoming incarnate on earth. He further emphasized that the Transfiguration came close to the end of Our Lord's ministry to give the apostles strength.

"He is giving them a glimpse of the reality that He will rise from the dead. Giving them the strength to be able to experience that. And it acknowledges that they were terrified, and I think that's a very reasonable reaction to seeing Jesus manifesting who He actually is, the Son of God who they've been walking with," Strickland said. "That perfection of St. Peter in a different passage in the Gospel: 'You are the Christ, the son of the living God.' – this Gospel really demonstrates that."

The bishop later added that while seeing the Transfiguration strengthened the apostles, it was also a great responsibility. "As Peter, James, and John were being strengthened in order to keep the faith even as Jesus died and then rose. And they struggled even there; they were strengthened, but they weren't the strongest still. Peter denies Jesus but then ultimately clings to Him and believes in His resurrection. So, Peter, James, and John, I think, are great reminders to us of those who have received much, much will be expected. That is the truth of the Gospel."

Strickland, touching on the recent National Eucharistic Congress, reminded viewers that "the very same Jesus that is transfigured on that mountain, speaking to Moses and Elijah, is present with us at every Mass. Really, I think that that emphasis is something we've got to continue to strengthen in each of our lives and in the life of the Church because it is the same Jesus of whom the Father says, 'This is my beloved Son, listen to Him.' We all need to hear those words echoed as we go to Mass, and for me as a priest, for every ordained priest, we really need to embrace that deeply into our hearts, the very same Jesus we're celebrating at the Eucharistic altar."

Later in the episode, host Terry Barber asked the bishop about the blasphemy at the 2024 Olympic opening ceremony. Strickland said he was glad bishops have spoken out in response, adding: "This is said not because our feelings are hurt as Christians but because this is blasphemous toward the Son of God. And I think we shouldn't miss the fact that this comes on the heels of the Eucharistic Congress, which reminds us of the sacred gift of the presence of Our Lord Jesus Christ in the Eucharist." Strickland then read from a letter written by Fr. Thomas G.

Weinandy, OFM, about the blasphemy and urging reparation.

Many people, including Catholic bishops and numerous Christians throughout the world, have condemned the blasphemous event that took place during the opening ceremonies of the Summer Olympics in Paris. As almost everyone now knows, there was a mocking display of the Last Supper where Jesus was portrayed as an obese female dressed in white.

She was surrounded by a gaggle of drag queen 'apostles,' and a young girl was also – we

should worry why? – included in this hypersexualized and sacrilegious depiction Amid all the condemnations and claims of the display's offensiveness, what has not been stated, even by Christians, is that those who planned, orchestrated, and perpetrated such a blasphemous portrayal, unless they repent, will not die a happy death. At the very moment of their death, they will be about to face the very one that they blasphemously mocked and demeaned. And contrary to the sentimentalized Christianity of many today, Scripture itself tells us that He will be their judge – the holy and risen Lord Jesus Christ.

Bishop Strickland said those paragraphs of the letter need to be highlighted because they remind us that the Lord was blasphemed. "There's just nothing really positive about it. Even if it hadn't been depicting Jesus at the Last Supper, the imagery and the connotations of it are debauchery right there on display at the Olympics, which are international, worldwide events that should uplift humanity and not drag us further down." The bishop urged viewers to pray for everyone involved in this mocking depiction of the Last Supper because they need to repent, lest they face the very Jesus they have mocked in judgment.

Strickland begins the second part of the episode by offering commentary on Matthew 15:21-28, in which Our Lord healed the daughter of a Canaanite woman. He stresses that the first half of this Gospel passage reminds us that Jesus came to bring back the lost sheep of the chosen people.

"We see ourselves in the Church today as the new Israel; we have inherited that call to be the

chosen people of God. And in that context, this woman asks, 'Who is a Canaanite?' She is not part of the house of Israel, but Jesus is true to His mission in saying, 'I can't throw to the dogs what is for the children of Israel.'" His Excellency adds that the Lord, in this Gospel, shows us what it really means to save the lost children of Israel, that is, to proclaim the truth even when it seems harsh or restrictive.

This woman is a Canaanite; she is not part of the house of Israel. So, Jesus says, 'I'm not here for you; I'm here to bring back the lost sheep of the chosen people, the house of Israel.' But … as this passage continues, this woman says boldly, 'Please, Lord, for even the dogs eat the scraps that fall from the table of their masters.' In that statement, the woman clearly expresses her faith in the reality that Jesus is the master. And ultimately, it's her faith that allows her daughter to be healed. 'Oh, woman, great is your faith.'

Strickland notes how this is echoed in many Gospel passages: it is faith that saves us and allows us to be part of the fold despite not being part of the chosen people originally. "What welcomes her to be part of the fold of God, to be part of God's flock, is her faith because she recognizes who Jesus is, and ultimately, we know that the ministry that the apostles adopt as they build the Church that is what they proclaim, 'Embrace Jesus Christ as your Lord and master.'

Later in the episode, Barber asks the bishop about a letter he recently published acknowledging the evil infiltrating the Church while still recognizing the Church's divine establishment and remaining there. "It is important to recognize that we are never to despair, that the hope of our faith is as sure and strong and founded on Christ as it ever has been. I think that's an important message," Strickland said, noting that many don't support what he says and want to act like everything in the Church is fine. "I disagree. I don't believe that that's what Christ calls us to. And I think the blasphemy at the Olympics is a good illustration of, 'It can happen.'"

Strickland underscored that the Church is meant to save souls, not calm the world. We may want peace, but true peace is in Christ, in which truth reigns. "It doesn't mean just everything's tranquil and letting people get away with sinful lives if everything stays calm. That's not what Christ is about, because that's a false calm and a false peace. So we need to acknowledge the evil, we need to acknowledge the betrayals, we need to acknowledge all of it. But always remembering that we are founded on Christ, that He is the cornerstone. We have to remember that Christ is always with us, that Christ is there, [that] He's our strength."

Strickland uses the example of the saints and martyrs to illustrate how we need to be strong in

our faith. "All the saints in one way or another gave their lives for the faith, the martyrs paid the ultimate sacrifice and died for their faith. But we need to be strong in clinging to those pillars of faith. Where is their strength? In Jesus Christ, the cornerstone of their faith."

The bishop urged viewers to use the foundation pillars on cornerstone of Christ and build a bridge to pull us out of the swamps of evil we find ourselves in, and into everlasting life. Using this analogy, Strickland added: "Let's say we're building a bridge over a swamp, that is full of alligators and other beasts that are ready to devour us. This bridge of faith, built on the pillars of faith that has its foundation the cornerstone that is Christ, … allows us to endure, to hold fast."

To hear more from His Excellency, tune in to this week's episode of The Bishop Strickland Show.

Virginia Ramey Mollenkott

"For the time will come when they will not endure sound doctrine; but after their own lusts shall they heap to themselves teachers, having itching ears;" II Timothy 4:3

By Riley J. Hood

In 1978 the New International Version was printed. Virginia Ramey Mollenkott was on the style committee. This style committee changed "only Begotten Son" into "one and only Son," with reference to Jesus. They started substituting "love" for words translated as "charity" and "mercy" in the KJV. The question one should ask is who is Virginia Ramey Mollenkott?

VRM was born of January 28th, 1932 in Philadelphia. Her parents were Frank and May (Lotz) Ramey. She grew up in a fundamentalist home. She earned a BA from Bob Jones University in 1953. In 1954, she married Frederick Mollenkott. In 1958 she gave birth to a son, Paul. Fred and Virginia divorced in 1973.

VRM earned an MA from Temple University in 1955. She earned a PhD from New York University in 1964. She was given an honorary Doctorate in Ministries from Samaritan College in 1989. She chaired the English Department at Shelton College from 1955 to 1963 and at Nyack College from 1963 to 1967. She then taught at William Patterson University from 1967 to 1997, chairing the English Department from 1972 to 1976. From 1997 she has held the position of Professor of English Emeritus.

From 1965 to 1975, she was an assistant editor for Seventeenth Century News. From 1970 to 1978 she was a stylistic consultant for American Bible Society, working on the New International Version. She was eventually asked to resign after her perverted views were known.

Virginia isn't known for being a Christian, or for being an academic, but for being a lesbian and a feminist. From 1980 to 1988 she worked on, "An Inclusive Language Lectionary" for the National Council of Churches. She held a seat on the Advisory Board of the Program on Gender and Society at the Rochester (New York) Divinity School from 1993 to 1996. She has been a manuscript evaluator for the Journal of Feminist Studies in Religion since 1994. Since 1997 she has served on the editorial board of Studies in Theology and Sexuality, based in the United Kingdom. She was a contributing editor to The Other Side from 2003 to 2007.

In 1978, she co-authored, "Is The Homosexual My Neighbor? A Positive Christian View," with Letha Dawson Scanzoni. This book was updated in 1994. In 1992 she published "Sensuous Spirituality," which was revised and updated in 2008. Some of her other titles are "Omnigender" and "Transgender Journeys." A reviewer wrote, "All of her writings may be subsumed under the theme of oneness, which Mollenkott variously describes as an 'organic wholeness' and a 'transcendental integrative vision.' The emphasis is on seeing God in all things and serving God in all activities, integration of the human personality around a unifying center, and awareness of humanity's interdependence."

In 2014, she published The Divine Feminine: The Biblical Imagery of God as Female. By 2014 her work was lauded by perverts within the organized Church. Among her endorsements are: "A calm, well-balanced, carefully prepared book. Excellent for adult Bible discussion groups, for occasional sermons, for suggesting ways of inclusive language. This book teaches and directs without antagonizing."-The Bible Today "A persuasive book, useful for personal reflection and group discussion, and ideal for gift-giving." -Daughters of Sarah "This is no dry erudite volume. It rubs salve in personal wounds inflicted by centuries of biblical misreading."-Sojourners "The book reflects careful research; it is written in a style that will appeal to those interested in the implications of biblical research but without the time or inclination to follow the involved discussions of biblical scholarship."-National Catholic Reporter

In this book, as with her other books, VRM preaches her El Shaddai "God of the breasts" interpretations. God has used motherhood references regarding His care for his people, but in context, none of these are arguments for feminism, lesbianism, sodomy, or sexual mutilation. Her career was a living example of the maxim, "A text without a context is a pretext."

According to Wikipedia, "She has delivered hundreds of guest lectures on feminist and LGBT theologies at churches, conferences, universities and seminaries throughout the United States." For forty years, VRM was a preacher of perversion, and a corrupter of Church Doctrine. If America has a regiment of feminist preachers, Virginia was their commanding officer. By this time, her personal life matched her profession. Mollenkott lived with her domestic partner Judith Suzannah Tilton at Cedar Crest Retirement Village until Judith's death in February 2018. Ramey and Tilton got married in 2013 following the United States Supreme Court decision in United States v. Windsor.

On September 25th, 2020, she did the world a favor and died. In spite of her Christian roots, she rejected the faith, and created an idol in her heart. She tried to sound like a pan-theist catering to pan-sexuality, but what really was a homosexual who corrupted and destroyed the Church here in America. Her participation on the New International Version of the Bible was the perfect storm of apostasy. A dynamic equivalent translation, based on minority critical texts, with a sodomite dominated style committee. The NIV has done more to corrupt the Church than any other of Virginia Ramey Mollenkott's more overtly rebellious works.

Moral Leprosy

" The garment also that the plague of leprosy is in, whether it be a woollen garment, or a linen garment; Whether it be in the warp, or woof; of linen, or of woollen; whether in a skin, or in any thing made of skin; And if the plague be greenish or reddish in the garment, or in the skin, either in the warp, or in the woof, or in any thing of skin; it is a plague of leprosy, and shall be shewed unto the priest: And the priest shall look upon the plague, and shut up it that hath the plague seven days: And he shall look on the plague on the seventh day: if the plague be spread in the garment, either in the warp, or in the woof, or in a skin, or in any work that is made of skin; the plague is a fretting leprosy; it is unclean." Leviticus 13:47-51

By Riley J. Hood

In the Bible, leprosy is not only contagious, but it is a representation of sin, even if the victim didn't commit a particular sin to contract it. If that is true of individuals, what about the moral fabric of a nation?

The libertarian promotes selfishness, anarchy, and destruction. Their open-borders policy coupled with their childless lifestyles are clearly a recipe for national suicide. Even worse is their opposition to the Moral Order which leads to internal collapse. When someone says, "I'm a libertarian" he means "I am pro-drugs, pro-prostitution, pro-pornography, pro-homo, pro-trans and pro-abortion." You are well within your rights to tell such a person he is marching in the wrong parade.

John Witherspoon said it so well, "He is the best friend to American liberty, who is most sincere and active in promoting true and undefiled religion, and who sets himself with the greatest firmness to bear down profanity and immorality of every kind. Whoever is an avowed enemy of God, I scruple not to call him an enemy of his country," and "It is in the man of piety and inward principle, that we may expect to find the uncorrupted patriot, the useful citizen, and the invincible soldier." That is the opposite of libertarianism.

George Washington said, "Of all the dispositions and habits which lead to political prosperity, religion and morality are indispensable supports. In vain would that man claim the tribute of patriotism, who should labor to subvert these great pillars of human happiness, these firmest props of the duties of men and citizens. Whatever may be conceded to the influence of refined education on minds of peculiar structure, reason and experience both forbid us to expect that national morality can prevail in exclusion of religious principle."

That explains today's America. On one side are the rabid dogs of immorality. On "our side" cold, apostate "post-Christians" have forsaken the Biblical world-view to promote social justice. These people decay the moral fabric of America as well. For example, an executive from Prison Fellowship, was being interviewed on Fox News. She talked about Bible-fellowships, etc. Then she started talking about social justice, and prison reform. That means more guilty people on the streets. Chuck Colson passed away, and liberals have corrupted the ministry he founded.

Need more examples? Girl Scouts have promoted lesbianism for more than 25 years. The Boy Scouts won their case in the US Supreme Court against the homosexuals, and then five years later caved in to them. Now sodomites are Scout leaders. Next year they will be calling themselves "Scouting America" to be "more inclusive," so much for being "Morally Straight" to quote their standards.

You don't think of Harvard, Yale, Princeton, Cornell as being founded by Christians, but they were. Even worse is when later generation Christian Universities have apostatized, such as Moody or Trinity University. They graduate "pastors" who deny the Divine inspiration of the Bible, repudiate the Moral Order and preach socialism. At Calvin College, in Grand Rapids MI, they teach evolution as fact, and tell their students the Bible has historical errors. If students can't trust the Bible for earthly things, is it any wonder they reject the Bible for spiritual things?

Salvation Army was founded by John Wilkes Booth, and SA workers in San Francisco in the 1880's invented the "red kettle." On many levels they do good work, but several of their leaders are pro-birth control or pro-abortion.

The YMCA stood for Young Men's Christian Association. A YMCA Minister invented basketball. You would never know today that Christians had anything to with it. You would never know that "The Y" was once Christian from the Village People song, that infers that staying at the Y is like going to a gay brothel; and that was almost fifty years ago. Today they promote everything from Eastern Religions to Social Justice.

In Milwaukee, like most cities, hospitals were founded by Christians. There was Trinity, St. Luke's, St. Joseph's, St. Francis, St. Mary's and Deaconess to name a few. Froedtert was originally Froedtert Memorial Lutheran Hospital, but by the 1990's Susan Pfleger was aborting babies there. Froedtert/Medical College of Wisconsin has a woman CEO who is a left-wing pro-abort. New York Presbyterian performs abortions. I don't consider most nurses "angels of mercy" anymore, but agents of the state. The hospice movement is even worse.

Compassion International and the Red Cross started out as Christian organizations. While they still bring relief to those in need, they have embraced humanism. They no longer do their kind acts in the name of Christ, but in the name of humanity. That is why there is a Red Star of David and a Red Crescent, and probably coming soon a Red Inverted Pentagram, because after WWII the Red Crossers became ashamed of the cross of Christ.

The Pro-Life Movement. What started out as concern about the pre-born had quickly devolved into what was easy for the pregnant woman. The attempt to re-criminalize abortion isn't supported by the very people who are supposed to oppose abortion as murder.

Mainline Protestants stopped believing in the Bible in the early 1900's, and their repudiation of the Moral Order began in the 1930's. Evangelicals are about a century behind, but they are doing the same things. Fundamentalists are not immune to this either. They are quite certain, that because they hold to an Adventist eschatology, that their congregations won't apostatize. Of course apostasy happens in the human heart, and where men are gathered together, sin and apostasy happen, and that is an understatement. It happens gradually, and usually there is a period of silence before the repudiation of God's Commandments become vocalized.

Apostasy is like a leprosy that has destroyed the Moral Fabric of America. We have been destroyed from within. Our Moral Fabric has been worn through. We are a third-rate country, which is in fact economic colony of Communist China, namely we send the PRC raw materials and they send us finished products. Our enemies have encircled us and we keep insisting on offending the Almighty.

The "Trump Bible"

"The Lord gave the word: great was the company of those that published it." Psalm 68:11

By Riley J. Hood

Donald Trump endorsed the God Bless the USA King James Authorized Bible. It contains the KJV, The US Declaration of Independence, the US Constitution, the Bill of Rights and The Pledge of Allegiance. It was compiled by a song-writer named Lee Greenwood, and published in 2021. This Bible was being sold for $59.99

I have personal rules that make good sense, which this Bible fudges. I endorse, and use the KJV. I oppose modern translations, and I oppose footnotes in a Bible translation. Some commentaries are better than others, but I prefer to keep the commentaries in a separate book. It lets me know where the Word of God is speaking, and where the opinions of men about God's Word is speaking. I support the USDOI, and the US Constitution, but these two documents are never Holy Writ, and as the heavens are above the earth, so is Bible above every other book or writing. My allegiance to God is far above my allegiance to the stars and stripes, and yes, I have no problem saying the Pledge, other than concerns about the behavior of my fellow citizens.

Something that obviously stands out is the fact that God doesn't bless America. We have turned our backs toward God. We have a spoiled and corrupt citizenry. We have murdered over 70 million babies in 50 years. We have sodomites, molesters, and perverts strutting around. We are a post-industrial service economy, an energy and resource colony of China. We are a third-rate power, whose word means nothing. We can't even identify Islam as an enemy, and we haven't won a war in almost 80 years. Trump wants to make America great again, I agree. Trump promotes the Bible vocally, but his policy decisions aren't always in line with his profession.

Applying the Holy Scriptures to the current issues and America's National Sins is of paramount importance. This practice has been going on since the Pilgrims landed at Plymouth Rock. One can read about America's many founding fathers supporting Bible translations, supporting Bible Societies, and in fact leading Bible societies.

On February 27th, 1844, a 77yr old John Quincy Adams as chairman of the American Bible Society said to that group, "The Bible carries with it the history of the creation, the fall and redemption of man, and discloses to him, in the infant born at Bethlehem, the Legislator and Savior of the world." Elias Boudinot, President of the Continental Congress in 1783; founded, and became the first President of the American Bible Society in 1816. He warned, "If the moral character of a people once degenerate, their political character must soon follow." Supreme Court Justice John Jay, of author of 6 of the Federalist Papers, was also a President of the American Bible Society.

John Langdon signed the US Constitution. He also was the Governor of New Hampshire and he found the New Hampshire Bible Society. That group's goal was to place a Bible in every home in the State. James McHenry signed the Constitution. In 1813, he became the President of the Baltimore Bible Society. Charles Cotesworth Pinckney also a singer of the Constitution was the first President of the Charleston South Carolina Bible Society.

Topping them all, George Washington, on April 30th, 1789 took his oath of office with his hand on an open Bible on the balcony of Federal Hall, in New York City. After He gave his inaugural address, he marched Congress down to St. Paul's Chapel for a Church service conducted by the Chaplains of Congress. The father of our country also said, "It is impossible to rightly govern the world without God and the Bible."

On March 28th, 2024, CNN posted, "What has caused outrage with this Bible is that it includes the Declaration of Independence, US Constitution, and even the lyrics to a Lee Greenwood song. So it's adding to the Bible, and it's adding specific political documents to the Bible that completely erase the separation of church and state." CNN is not concerned with Biblical purity, they are concerned with a Baptist drollery, that was quoted by Jefferson, and then written into the Constitution of the USSR.

The New York Times quoted some evangelical stooges, and concluded, "Evangelicals who have found the weaponization of Scripture distasteful are showing us that their vote is very much up for grabs." The NYT should realize Scripture weaponizes itself, as stating that it is sharper than a two-edged sword in Hebrews 4:12. MSNBC posted, "Rev. Loran Livingston, the senior pastor of Central Church in Charlotte, North Carolina, criticized the Trump-endorsed "God Bless the USA Bible." It was more of the same from the Washington Post.

Some Evangelicals cite concerns similar to what I stated above as being syncretistic. I hardly think so. It is not like the God Bless the USA Bible is a Masonic Bible, or trying to harmonize Christianity with Buddhism or Islam. Some people say Trump is adding to Bible, but nowhere does this Bible say that the aforementioned documents are Scripture. Only the Mormon Cult does that. The Scofield Bible is loaded with dispensational footnotes, some of which are quite egregious, but no one accused Schofield of adding to the Word of God. Al Sharpton accused Trump of blasphemy. Any condemnation by Al Sharpton is an endorsement to normal people.

Christian Post reporter Jon Brown writes, "Tony Perkins, president of the Washington-based Christian conservative advocacy organization Family

NPR, Trump and The Hypocrisy of Persecutors

By Matt Warneke

A brother and a close friend of mine recently shared some political information they heard on National Public Radio (NPR). The NPR information was politically skewed against Donald Trump. NPR's own editor has acknowledged their bias, and the press has addressed their federal funding as well as foundational funding in the millions of dollars from sources such as Bill & Melinda Gates.

They both were aware that NPR has become a leftist news program partially paid for by we the taxpayers, but they admitted they had become somewhat addicted to the programs. My first question to them was why they were so gullible to believe and then repeat the news, and secondly why we the taxpayers continue to financially support their bias? Therein lies the current state of our nation and world; money manipulation, monopolies and misinformation.

This piece could be titled "For the Love of Money…and the Power of the Deep State, Forever!". Instead, I included a biblical subtitle from Luke chapter 12 regarding hypocrites and persecutors. This goes back to a time where the Romans were in control of the territory surrounding Jerusalem, but the Jewish leaders in coordination with the Roman magistrate decided to persecute one individual, Jesus Christ (JC). He was the perfect human extending Gods love and truth throughout humanity. But he threatened their power and their B.C. money laundering schemes. Because of His good words and actions, they murdered Him on a cross. He was a threat.

So, was it any surprise that there was an assassination attempt on Trump and that he's been wrongfully persecuted by the DOJ and not protected by his own security detail? Who among you weren't suspicious of foul play from those in charge of Trump's personal safety during the rally? Many people thought it might have occurred much sooner. Some people found humor in the Butler PA event. But soon, everyone will be exposed to the truth.

Many will be shocked as to the extent of the corruption around the USA and world. When Hollywood and certain democrat politicians start saying that they may move out of America, there's a good reason for that. It's possible that they will be judged and they are terrified that they could be found guilty.

My eyes were completely opened to extent of corruption when I read the book "The Naked Communist" or TNC. That exposed the communist world plan through the socialist shmuck Karl Marx. The author (Cleon Skousen), was a CIA manager who had been exposed to the entire plan. A friend tells me that "The Naked Capitalist" is just as good. I suspect that the communists (aka China) and woke corporations highjack capitalism as a government run program in an attempt to compete with free countries like the USA.

Couple the real history of TNC with daily, weekly and monthly uncensored news from free press sources like X, Telegram, x22report, Truth Social and Reality News and you may start to awaken to the truth. Top it off with the brief history of Trumps productive presidency in the documentary "The Greatest Show on Earth" on www.goodlion.tv and you may finally have a clue what's going on behind the curtain of MSM and the foreign peace initiatives laid out by President Trump. Make no mistake, peace is the greatest objective, but there will be consequences for those agitators against America.

Going back to NPR, many Americans are still hypnotized with mainstream media's grasp on their minds and souls, and the pending human slavery to the 16-year prison plan for America. How many more examples can be provided as why only one individual, a political outsider (Trump), has been called to take down the Deep State and the 13 richest families in the world? We the People are the majority. Despite more attempts to rig or delay the 2024 election, We the People will persevere.

As people being stripped of our cherished freedoms under our own constitutional rights, we should wake up quickly to all the censorship. It's difficult and time consuming, but you actually have to mine data and make an effort to be informed. The MSM and Deep State propaganda machine has been working overtime.

Be diligent on or before November 5, 2024 to get out and vote if you want any chance of retaining your freedoms and the things you've worked so long and hard for. If not, pretty soon, as a mere possession of the Deep State, you will own nothing and feel miserable for being so lazy and ignorant to the real issues facing our nation and world. Donald Trump along with his family, trusted advisors, patriots, and political supporters are in the process of providing a history lesson on our country and constitution. Wake up!

Luke CH 12:1-8 – The hypocrisy of persecutors will be unmasked, and the glory of faithful martyrs will be revealed…it is better to hold true to God than to be punished for infidelity.

Green Economy *cont. from page 3*

crackdowns on farming. Facing an energy crisis, governments across Europe began to roll out regulations forcing Europeans to adopt, shall we say, more spartan lifestyles.

"Cold swimming pools, chillier offices, and shorter showers are the new normal for Europeans," Business Insider reported, "as governments crack down on energy use ahead of winter to prevent shortages."

In other words, instead of producing or purchasing more energy, governments began to crack down on energy consumption.

It didn't stop there.

In May 2023, months after Germany shut down its last three remaining nuclear power plants, the Financial Times reported that many Germans were "outraged and furious" at a law that forced them to install heating systems that run on renewable fuels, which are far more expensive than gas-powered boilers.

The action was even more invasive than the European Union's sprawling ban on gas-powered vehicles that was finalized just months before.

"[The EU] has taken an important step towards zero-emission mobility," EU environment commissioner Frans Timmermans said on Twitter. "The direction is clear: in 2035 new cars and vans must have zero emissions."

Wall Street's $14 Trillion Exit

The Green policies emerging from Europe did little to alleviate Americans' concerns that the climate policies of central planners are not driven by sound economics. Yet many similar policies have taken root in the US.

As of March 2024, no fewer than nine US states had passed laws to ban the sale of gas-powered cars by 2035. Meanwhile, the Biden administration recently doubled down on an EPA policy to begin a coerced phase-out of gas-powered vehicles — even though the federal effort to build out the charging stations to support EVs has flopped spectacularly (despite $7.5 billion in funding).

Despite federal subsidies for EVs, a majority of Americans remain unsold on them, and the sputtering EV market has left a wake of carnage. In June, the EV automaker Fisker Inc., which in 2011 received half a billion dollars in guaranteed loans from the US Department of Energy, filed for Chapter 11 bankruptcy in Delaware. (Fisker had long drawn comparisons to Solyndra, the solar panel company that went belly up in 2011 just two years after receiving $535 million from the US government.)

Fisker's bankruptcy came just months after the New York Times reported on a massive exodus of capital from Climate Action 100+, the world's largest investor initiative on climate change. JPMorgan Chase and State Street pulled all funds, while BlackRock, the world's largest asset manager, reduced its holdings and "scaled back its ties to the group."

"All told, the moves amount to a nearly $14 trillion exit from an organization meant to marshal Wall Street's clout to expand the climate agenda," the Times reported.

Days after the Times report, PIMCO also announced it was leaving Climate Action 100+. Invesco, which manages $1.6 trillion in assets, made its exit just two weeks later.

'You Cannot Avoid the Consequences of Avoiding Reality'

There's no doubt that the Green economy is in retreat, but the question is, Why?

First, it's becoming apparent — especially in Europe where energy is more scarce and expensive — that people are souring on Green policies.

As Teixera noted, voters don't actually like being told what car they must drive and how to cook their food and heat their homes. If you own a swimming pool, you probably want to be able to heat it.

Policymakers talk about "quitting" fossil fuels, but in recent years Europeans got to experience an actual fossil-fuel shortage following Russia's invasion of Ukraine, which disrupted fossil fuel imports. The result was energy rationing, something Europeans don't seem to care for.

This brings me to my second point. Green parties and environmentalists have had success largely by getting people to focus on the desired effect of their policies (saving people from climate change) and to ignore the costs of their policies.

Politicians seem to grasp that their policies come with trade-offs, which is why their bans and climate targets tend to be 10, 15, or 30 years into the future. This allows them to bask in the glow of their climate altruism without dealing with the economic consequences of their policies.

This is one of the most salient differences between economics and politics. Economics is all about understanding the reality of trade-offs, but politics is primarily about ignoring or concealing these realities.

Few understood this better than the economist Henry Hazlitt, the author of Economics in One Lesson, who wrote time and again about the tendency of politicians to overlook the secondary consequences of their policies, which were responsible for "nine-tenths of the economic fallacies that are working such dreadful harm in the world today."

For a time, politicians were able to ignore the secondary consequences of their policies. But voters are finally getting a taste of the costs of Green policies, and they don't like it.

"You can avoid reality," Ayn Rand once noted, "but you cannot avoid the consequences of avoiding reality."

An 'Iron' Law

Fear of climate change has helped progressives and Greens gain more economic control in recent decades, but even fear has its limits.

Teixera points to Roger Pielke, Jr., a University of Colorado Boulder professor who in 2009 wrote about the "iron law of climate policy."

"Climate policy, they say, requires sacrifice, as economic growth and environmental progress are necessarily incompatible with one another," he wrote. "This perspective has even been built into the scenarios of the IPCC."

Whether one accepts this premise — that economic growth and environmental progress are necessarily incompatible — doesn't matter. What matters is that when economic growth policies collide with emission reduction targets, economics wins.

It's one thing to say that gas prices should be $9 a gallon, as physicist Steven Chu once did, because climate change is a dire threat. It's another thing to say this while trying to become Energy Secretary, as Chu was while testifying before the Senate in 2012:

Sen. Mike Lee: "So are you saying you no longer share the view that we need to figure out how to boost gasoline prices in America?"

Chu: "I no longer share that view… Of course we don't want the price of gasoline to go up; we want it to go down."

You can call this the "iron law of climate policy," or you can call it common sense. (Who wants gas to go to $9 a gallon?) Essentially, it's lofty environmental goals colliding with economic and political reality.

This phenomenon is also conspicuous in Joe Biden's presidency. On day one, the president nixed the Keystone XL Pipeline (for inexplicable reasons), and would go on to declare global warming a greater existential threat than a nuclear war.

Yet he would later boast that his policies were lowering gasoline prices, and that he oversaw record-high US oil production.

This is the iron law of climate policy, and it explains why the Green economy is suddenly in retreat all over the world.

Not-So-'Green' Policies

The reality is that the Green agenda comes with steep trade-offs, something Europeans, Americans, and Wall Street are finally beginning to admit.

But Europe's energy policies haven't just been unpopular; many of them haven't even been "Green."

For starters, electrical vehicles are hardly the environmental panacea many claim them to be. In fact, EVs require much more energy to produce on average than gas-powered vehicles, and also often run on electricity generated by fossil fuels. This means that EVs come with their own carbon footprints, and they tend to be much larger than most realize.

Green Economy *cont. from page 20*

An analysis by the Wall Street Journal found that shifting all personal vehicles in the U.S to EVs would reduce global CO2 emissions by only 0.18 percent. This would do virtually nothing to change global CO2 emission trends, which data show are rising not because of European or US personal vehicles, but from emerging economies like China.

And then there's Germany's bizarre decision to abandon nuclear power. Despite an eleventh-hour plea from a group of scientists (including two Nobel laureates) who urged lawmakers not to do so because it would exacerbate climate change, Germany closed its last three nuclear power plants — Emsland in Lower Saxony, Neckarwestheim 2 in Baden-Württemberg, and Isar 2 in Bavaria — in the middle of an energy crisis.

The move puzzled many around the world. After all, nuclear energy is cleaner and safer than any other energy source with the exception of solar, according to estimates from Our World in Data. Even more bizarre, Germany's phaseout of nuclear power, which began in 2011, coincided with a return to coal.

Germany's decision to ramp up coal production and shutter its last nuclear plants is hardly consistent with the EU's view that climate change is a dire threat to human kind, many noted.

"No less a climate-change evangelist than Greta Thunberg has argued publicly that, for the planet's sake, Germany should prioritize the use of its existing nuclear facilities over burning coal," journalist Markham Heid pointed out at Vox.

Meanwhile, in the US, where nuclear power has been steadily attacked for decades by politicians and environmentalists, the Senate quietly passed (by a vote of 80–2!) a bill to support the deployment of nuclear facilities.

These anecdotes illustrate an important point: Green policies are not just unpopular and uneconomical; they are often senseless.

Few understand this better than Dutch farmers, who are being forced to sell off their farms by politicians who have little understanding of economics trade offs.

Scary Fairy *cont. from page 12*

"peaceful" environmental modification activities performed by unspecified entities, under unspecified circumstances, without limitation to harm. Whether harm is inflicted on a nation or a region's agriculture, its environment, or on the health of its citizenry does not matter from ENMOD's international legal point of view because its intent is "peaceful." Nevertheless, large-scale environment modification cannot be construed as "peaceful." Instead, it is fundamentally hostile as it damages Earth's self-protective natural processes.

"The veil of ENMOD deception was pierced by applying precise knowledge of contract law to ENMOD's Articles. The highly secret "peaceful" environmental modification project activity was discovered by an accidental release of material "pseudo-cryoconite" from an aircraft in 2016, which appears to have been formulated to melt Arctic ice, presumably, to open a northern passage for ships from China."

This is from the abstract. There is much more to be learned from this document, so, please take the time to read it and understand how damaging the Climate Protocols are to us and everything on this earth. As the authors so chillingly end:

The global technological assault on our planet's natural environment and all its biota by barbarian entities without compassion or remorse is no less than Planetary Treason. Unless global populations demand an end to the technological assault on our environment, replete with its dissemination of false information [136], we will inevitably continue to charge forward in the first ever anthropogenic species extinction… Our time is short, it's less than a minute before midnight for climate collapse and complete biosphere breakdown. Our children face a ghastly future, potentially within the current decade.

Kill the beast.

Secret Service *cont. from page 1*

"was not present on the day" of the attempted assassination.

"The whistleblower claims that if personnel from CSD had been present at the rally, the gunman would have been handcuffed in the parking lot after being spotted with a rangefinder," the letter states.

"Secret Service personnel expressed alarm that individuals were admitted to the event without vetting," the letter says. "The whistleblower alleges that those who raised such concerns were retaliated against."

At the July 13 rally, 20-year-old Thomas Matthew Crooks was able to fire shots at the former president from a rooftop just 130 yards away from the stage. Crooks had reportedly been spotted by witnesses, flagged by Secret Service and even was identified by a local counter sniper over an hour and a half before Trump took the stage.

"A whistleblower has alleged to my office that the Secret Service Counter Surveillance Division (CSD), the division that performs threat assessment of event sites before the event occurs, did not perform its typical evaluation of the Butler site and was not present on the day," the letter states. "This is significant because CSD's duties include evaluating potential security threats outside the security perimeter and mitigating those threats during the event."

As a result of these security lapses, Crooks was able to take aim at and injure the former president, kill volunteer firefighter Corey Comperatore and injure attendees James Copenhaver and David Dutch, who are both in stable condition.

Rowe testified on Tuesday before a joint hearing held by the Senate Judiciary and Homeland Security Committee after U.S. Secret Service Director Kimberly Cheatle resigned on July 23 following her own evasive congressional testimony. Rowe's testimony was similarly evasive as he left many lawmakers' questions unanswered.

"You acknowledged in your Senate testimony that the American Glass Research complex should have been included in the security perimeter for the Butler event," the letter says. "The whistleblower alleges that because CSD was not present in Butler, this manifest shortcoming was never properly flagged or mitigated."

Despite this, Trump has vowed to continue holding outdoor rallies and said that the Secret Service will "substantially step up" their security detail going forward, according to a post on Truth Social from Saturday.

The Secret Service didn't immediately respond to the Daily Caller News Foundation's request for comment.

One Nation Under God

A Boldface Lie

"Cursed is he that taketh reward to slay an innocent person." Deuteronomy 27:25a

By Riley J. Hood

The Wisconsin Independent, a piece of socialist nonsense posing as journalism, printed a boldface lie in its May 2024 edition. The head line was, "With longtime justice retiring, future of abortion rights again uncertain." It talked about the unqualified Ann Walsh Bradley retiring after 2025. I find it amazing that she is stepping down, unlike the unqualified Feinstein or RBG who insisted on ruining America until their dying day.

But here is the boldface lie, "While abortion is still legal in Wisconsin, the fight is far from over." The article does mention the Wisconsin 940.04 Homicide Statute as "the 1849 law" as if the law is about that year it was passed, a long time ago when people were heterosexual. Then it states that an unqualified Madison judge decided with her emotions, and expressed her selfishness by asserting the law had to do with infanticide, not abortion. She probably supports infanticide as well, as it is only a matter of months and a birth between one form of cold-blooded child murder and the other.

The law has not yet been struck down, and the reprobate Josh Kaul's lawsuit is still active, so abortion is not legal in Wisconsin. The law is being unenforced, this time under the auspices of a county level feminazi, as opposed to a reprobate decision from SCOTUS. Abortion is happening in Wisconsin like people are smoking pot in Wisconsin, but neither is currently legal. There is no such thing as Abortion Rights, and never will be, because to be a Right, that activity must be sanctioned by God, and God speaks expressly against abortion as murder in His Holy Word the Bible. The Wisconsin Independent printed this boldface lie not only to encourage pro-abortion people to vote Democrat, but also to encourage mothers to have their own children murdered.

Chemical Warfare

"But whoso shall offend one of these little ones which believe in me, it were better for him that a millstone were hanged about his neck, and that he were drowned in the depth of the sea. Woe unto the world because of offences! for it must needs be that offences come; but woe to that man by whom the offence cometh!" Matthew 18:6-7

By Riley J. Hood

When I was a Marine, when we were sent overseas, the Marine bases were surrounded by drums where garbage and excrement were burned. The disgusting smell wafted across the base as you were running the perimeter for your morning P.T. I was always thinking that if these people hate us that much, what else are they burning?

Chemical warfare in a modern sense began in WWI, starting with chlorine and then mustard gas. In March 1988, during the Iran-Iraq War, the Kurds rebelled and Saddam Hussein gassed the Kurds, including women and children. Over 3200 people were murdered. In 1991 US troops in Desert Storm faced the threat of gas and chemical warfare, and this author believes "Gulf War Syndrome" is a result of exposure to chemical weapons at a lower level.

The worst form of chemical warfare is that which is employed in the war on the preborn. A woman doesn't need to go to the abortion clinic, where she might hear the gospel being preached by some Christian, she can go to Walgreens and buy Plan B pills. Easy anonymous murder, with no push back whatsoever.

Marjorie Dannenfelser writes, "On March 26th, The Supreme Court is set to hear arguments in the mail-order abortion drug case that could force the FDA to reinstate stricter safety protocols for mifepristone. These safety protocols existed for 16 years before the Obama administration began dismantling them." Lila Rose follows up, "Walgreens and CVS will begin selling the lethal abortion pill with a prescription this month. This means that in pro-abortion states like California, Illinois, and Connecticut, a teen with a doctor's note can receive the deadly abortion pill in her local pharmacy, all without her parent's knowledge. Expansion of the abortion pill into local pharmacies has already killed tens of thousands of preborn children."

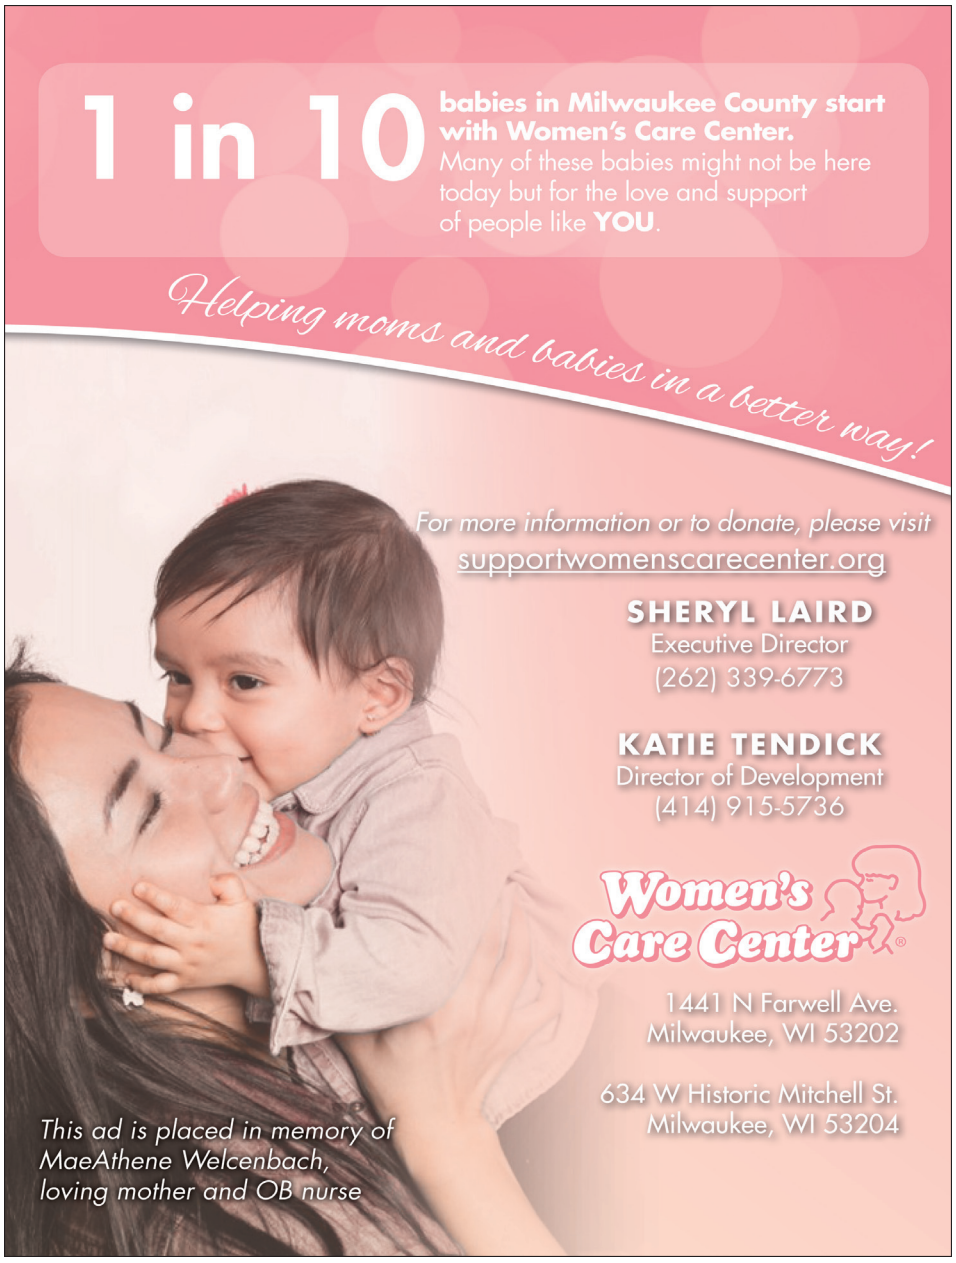
On Thursday June 13th, SCOTUS approved of chemical murder by unanimous vote. According to Amy Howe from www.scotusblog.com "The Supreme Court on Thursday threw out a lawsuit seeking to roll back access to mifepristone, one of the two drugs used in medication abortions. In a unanimous decision, the court ruled that the doctors and medical groups challenging the expansion of access to the drug by the Food and Drug Administration in 2016 and 2021 lack a legal right to sue, known as standing. The justices did not reach the merits of the challenge – that is, they did not rule on whether the FDA acted properly in expanding access to mifepristone."

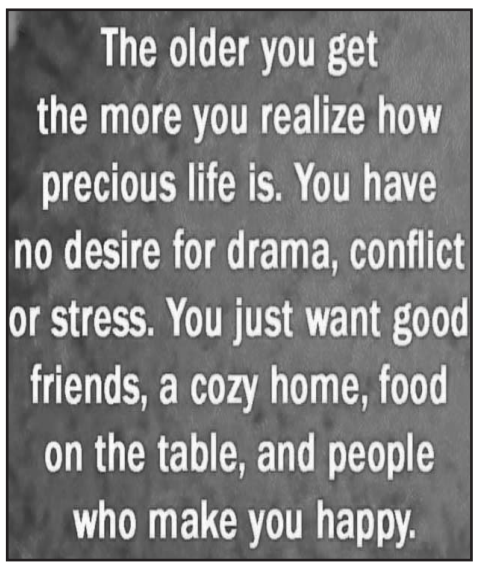
This fallacious opinion was written by Brett Kavanaugh. Because Pro-lifers can't prove that pro-abortion policies harm them directly; they have no standing. In other words, the preborn babies themselves, in the womb would have to file suit. Amy Howe adds, "he explained, and under the Constitution, merely objecting to abortion and the FDA's policies are not enough to bring a case in federal court." This was affirmed by all nine wicked monstrosities which are stinking up the court. Strict Constitutionalism has proved to be the libertarian excuse I always knew it was. The result is, "mifepristone will continue to remain widely available in the United States, where it is used in over 60% of abortions by health care providers." www.cnn.com, adds, "Medication abortion accounts for nearly two-thirds of all US abortions, according to some estimates. The FDA approved mifepristone in 2000 as part of a two-drug regimen to end a pregnancy and it has been shown to be safe and effective. The pill is also often prescribed for miscarriage treatment." Of course, it is only "safe" for the mother, it is lethal to the baby, but the staff at CNN love abortion.

No hope from Donald Trump on this one, according to www.axios.com "President Trump said during the first 2024 presidential debate that he will not restrict access to abortion drugs if elected. Trump takes credit for the Court, but it is now dominated by Ketanji Brown Jackson. Trump's court was never all that great, and quite frankly Trump doesn't care about the preborn. He was more pro-life when he was President than he is today.

The face of abortion is changing with chemical murder becoming more prevalent. This form of abortion must be recriminalized along with surgical abortion. These innocent preborn babies are even smaller than those being surgically murdered. You can picket outside the local Walgreens, CVs, or whatever pharmacy sells abortion pills.

You can organize a boycott against Big Pharma companies, but the heavy lifting on this must be done by pastors preaching from the pulpit. I find it amazing that churches are mostly attended by women, who are supposed to be so inherently loving, and yet over one million babies are aborted in America every year. The reason is silence from the pulpit. If an ounce of prevention is worth a pound of cure, a sermon about baby-killing, warning women in the first instance, exhorting them to do the right thing, is worth more than all the "post-abortion" retreats in the world. Forgiveness is a wonderful thing, but it doesn't put a baby back together again or bring a baby that has been chemically killed back to life.





VOICE OF JERUSALEM

Harris as president could be a disaster for Israel and the Jewish people

By Zvika Klein

A dangerous candidate for Jews, Israel. Then Senator Kamala Harris spoke with Palestinian students and scholarship recipients at Al-Quds Bard College in Abu Dis, east of Jerusalem, in 2017.(photo credit: Office of VP Kamala Harris)

The story begins on a tense summer afternoon on Wednesday in Detroit, where Vice President Kamala Harris, the Democratic presidential nominee, was making a campaign stop. The atmosphere was charged as she arrived at an airport hangar, where she was met not only by her supporters but also by the founders of the Uncommitted National Movement, Abbas Alawieh and Layla Elabed.

This extreme group had been mobilizing Arab American voters in Michigan to withhold their support for President Joe Biden due to his stance on Israel and Gaza. During this brief encounter, a tearful Elabed pleaded with Harris to consider an arms embargo on Israel, citing the devastating impact of Israeli military actions on her community in Gaza. Harris, attempting to show empathy and maintain political balance, assured the group that her campaign would continue to engage with their concerns. This ambiguous response left room for interpretation, leading to a media frenzy and heated debates about her proper stance on the issue.

Harris's willingness to entertain an arms embargo, as suggested during her Detroit meeting, is not an isolated incident. Over the years, her actions and statements have consistently raised alarms about her commitment to Israel. In February 2019, when Rep. Ilhan Omar used antisemitic tropes by suggesting that American support for Israel was "all about the Benjamins" and accusing American Jews of having "allegiance to a foreign country," Harris's response was disturbingly tepid. Instead of unequivocally condemning Omar's statements, Harris expressed concern that the criticism might endanger Omar, thus failing to denounce the antisemitic rhetoric within her party firmly.

Harris's support for the Iran nuclear deal (JCPOA) is another contentious point. In 2015, she supported the agreement, which many critics argue empowers Iran, a significant threat to Israel. Rejoining the JCPOA aligns Harris with the progressive wing of the Democratic Party, which has increasingly taken a hostile stance toward Israel. This alignment is deeply troubling for those who believe that the deal does not sufficiently prevent Iran from developing nuclear weapons.

Harris inconsistent and counterproductive

Harris's approach to diplomacy has often been inconsistent and counterproductive. During a visit to George Mason University in 2021, a student accused Israel of conducting an "ethnic genocide in Palestine." Instead of refuting these baseless claims, Harris emphasized hearing the student's perspective. At the Munich Security Conference in February 2023, Harris advocated for the establishment of a Palestinian state without adequately addressing the ongoing threat of terrorism from groups like Hamas.

Harris's public comments have sometimes appeared to undermine Israel's negotiating position. In March 2024, she called for "an immediate ceasefire" in Gaza, which would have effectively provided a lifeline to Hamas.

Harris's stance on Israel has significant implications for the American Jewish community. Former US Ambassador David Friedman has warned that her candidacy could lead to a historic shift of Jewish voters to the Republican side, given her alignment with the progressive wing of the Democratic Party and her insufficient support for Israel. Friedman noted that Harris's record does not pass the "kishkes test" of genuinely supporting Israel, a sentiment that resonates deeply within the Jewish community.

Harris's candidacy reflects a broader and concerning shift within the Democratic Party. The party's progressive wing, including figures like Bernie Sanders and members of "the Squad," has increasingly embraced anti-Israel rhetoric. Sanders has compared Israeli Prime Minister Netanyahu to Hamas leaders, calling Netanyahu a "war criminal" and questioning US support for Israel. This shift is not just rhetorical but also policy-driven. Progressive leaders have called for an end to US military aid to Israel and have pushed for policies that are hostile to Israeli interests. Harris's alignment with these figures raises severe concerns about the direction of US foreign policy under her leadership.

Unlike President Joe Biden, who has been seen as a moderate within the Democratic Party and has a long history of solid support for Israel, Harris is more aligned with the progressive wing. Her alignment with this faction includes her support for policies like the Green New Deal and Medicare for All, which reflect the broader progressive agenda. This positioning makes her more susceptible to the influence of progressive leaders who have been critical of Israel and supportive of Palestinian causes. This alignment is deeply troubling for those who believe that unwavering support for Israel is crucial to US foreign policy.

Harris's track record on Israel is fraught with troubling decisions and statements that raise serious concerns about her commitment to the US-Israel alliance. Her openness to discussing an arms embargo, her soft response to anti-Israel rhetoric, her support for the Iran nuclear deal, and her alignment with the progressive wing of the Democratic Party all suggest a potential shift in US policy that could jeopardize both Israeli and American security interests.

As Israel faces multiple threats, unwavering American support is more crucial than ever. Harris's record indicates she will probably not provide the steadfast backing that Israel needs. This election is pivotal, and the stakes for Israel and the American Jewish community could not be higher. Voters must carefully consider the implications of a Harris presidency and its potential risks to one of America's most important allies.

It is critical to remember the recent Iranian missile attack on Israel in April, which underscored the genuine threat Iran poses to Israel's security. The attack, which targeted multiple locations within Israel, was a stark reminder of Iran's capabilities and intentions. This assault resulted in significant damage and loss of life, further exacerbating the tensions in the region and highlighting the existential threat that Iran continues to pose to Israel. Iran's aggressive actions, supported by its proxies in the region, demonstrated the necessity for a strong and unwavering alliance between the US and Israel.

Taking the necessary steps to counter the Iranian threat

The Iranian threat is not hypothetical; it is a clear and present danger that requires a firm and decisive response from the United States. Any wavering in support or indications of weakening resolve could embolden Iran and its allies, leading to further escalation and instability in the region. Harris's track record, including her support for rejoining the JCPOA, raises concerns about whether she will take the necessary steps to counter this threat effectively.

Let's add to the fact that earlier this week, Harris's selection of Tim Walz over Josh Shapiro as her running mate sparked significant controversy and added to the concerns about her stance on Israel and antisemitism. According to JTA, critics have suggested that Harris's decision to bypass Shapiro was influenced by progressive elements within the Democratic Party who opposed his strong pro-Israel stance, labeling him "Genocide Josh." Republicans have used this decision to paint the Democrats as antisemitic. Despite the Harris campaign's rejection of these accusations and her husband's Jewish identity, which they argue negates such claims, the episode underscores the growing divide within the party and the increasing influence of anti-Israel sentiments.

Kamala Harris's track record in Israel raises serious concerns about her potential presidency. Her willingness to entertain an arms embargo, her alignment with progressive critics of Israel, her support for the Iran nuclear deal, and her soft stance on anti-Israel rhetoric suggest a drastic shift in US policy that could jeopardize both Israeli and American security interests. Harris's failure to unequivocally support a prominent Jewish candidate like Shapiro only adds to the fears that her presidency could further alienate American Jews and weaken US-Israel relations.

American Jews need to understand definitively that anti-Zionism is antisemitism, and the allies they thought they had within the Democratic Party aren't as supportive as they once believed. If Jews care about the survival of Israel during this tumultuous period, they must recognize that voting for Harris is not an option.

This election is not just another political choice; it is a life or death decision that can literally affect the existence of the Jewish state. The stakes could not be higher. Harris's presidency could lead to policies that embolden Israel's enemies and weaken the US-Israel alliance, posing an existential threat to the Jewish state.

In stark contrast, while Donald Trump is unpredictable and controversial, his track record regarding Israel was consistently strong: he facilitated the Abraham Accords, acknowledged the Golan Heights as part of Israel, and moved the US embassy from Tel Aviv to Jerusalem. His actions have strengthened Israel's position and security in the region.

Harris, by contrast, could be a disaster for Israel and the Jewish people. This is a pivotal moment in history, and the choice made at the ballot box will resonate far beyond American borders. Consider this carefully before casting your vote. The future of Israel and the safety of the Jewish people depend on it.

Trump Bible *cont. from page 19*

Research Council, told The Christian Post that he supports Trump's promotion of the Bible if it encourages someone to read it. 'That is great news!' Perkins said. 'The truths of the Bible transform lives. A daily dose of the Bible is the best anti-anxiety medicine you will find. For those getting into the Word, I'd recommend checking out Family Research Council's daily Bible reading plan, which will take you through the Bible in two years."

The Christian Post quotes Carol M. Swain, a Christian retired professor at Vanderbilt University, "Why should anyone get bent out of shape because Trump endorses Lee Greenwood's USA Bible?' she asked on X. 'America would be better off if more people read the Bible and the founding documents. Putting them together in one volume makes it easier for people to be educated about our nation and its roots."

I have disagreements with Donald J. Trump, but his endorsement of a King James Bible isn't one of them. His endorsement puts him in good company. I have heard these same Evangelicals pray for leaders, saying "Lord give them your wisdom." Our leaders have God's wisdom, namely the Bible, which they ignore, undermine, and reject. You want to make America great again, let us begin with National repentance for national sins. God spared your life, Donald Trump. So, make America great again. America was great, when her laws reflected God's laws, which are written in that King James Bible. That begins with protecting all the preborn, and putting an end to a legalized 50-year murder spree.

Trump 2024!!

The Dirty Dan's - Feyen and Knodl

The Dirty Dan's and the rest of Vos's illegitimate candidates.

By Bill Savage

I wrote earlier about the primary process. Primaries occur when enough voters in a certain district feel that their voices are not being represented properly. Normally it is hard to find a challenger because of the forces behind these incumbents, many who feel that they are "entitled" to the support of conservative republicans, whether they deserve that support or not. Whenever the swamp finds an opponent for a conservative that the swamp can't control the mantra is "primaries are healthy" and "we all must unify" and come together.

The Dirty Dan's - (Feyen and Knodl)

Both Dan Feyen (20th Senate District) and Dan Knodl (24th assembly District) have lengthy track records of years in office. Neither has a record that will justify getting reelected. So, they have turned to launching despicable tactics to get elected. Their ads do not just simply mislead or exaggerate the truth, the ads are downright lies.

Note to the Dirty Dan's – Whether you win or lose, we will make sure that EVERY ONE of your constituents knows that you are despicable unmanly and corrupt men.

Robin Vos and the swamp, including Dan Feyen, is hiding behind the group "Stronger Wisconsin Fund" to do their dirty work. We have linked the group to Vos and company. In the case of Dan Knodl, he has actually sent out incredibly misleading ads under his own name as well as the Stronger Wisconsin group.

Hopefully the voters in the 20th Senate District and the 24th Assembly District will pushback on this kind of corruption within the party.

It is no wonder Robin Vos has a 14% approval rating. It appears Feyen and Knodl are trying to go even lower!

In the past, these types of swamp tactics were eventually forgotten. We will not forget this time as the stakes are as high as they get. We must remove the tyrants who are selling the futures of our children down the proverbial river for their immediate gain.

WI the People

FOR IMMEDIATE RELEASE

Fraudulent and Libelous Mailers by Dark Money Group, Stronger Wisconsin Fund, has ties to Republican Party of Wisconsin and Speaker Robin Vos.

August 5th, 2024
WI The People
Contact email: strongestwisconsin@gmail.com

There is a deep and growing concern across Wisconsin about election interference in Republican primaries by Stronger Wisconsin Fund, Speaker Robin Vos and the Republican Party of Wisconsin. This dark money election interference was covered on August 1st by Fox 6 news

Stronger Wisconsin Fund is a new dark money group that registered as an Independent Expenditure with Wisconsin Ethics Commission on July 12th, 2024. They reported having spent over $408,000.00 in attack ads against Conservative Republicans.

This is what you need to know:

I. Stronger Wisconsin Fund uses an address at 2809 E Hamilton Ave. Eau Claire, WI 54701. The business at this address is Pak Mail and it has been confirmed that Stronger Wisconsin did not have an account or mailbox with them as of August 1st, 2024, and no right to be using that mailing address. Therefore, we allege address fraud is being committed.

II. Stronger Wisconsin Fund is making allegations stated as facts that are untrue about fellow Conservative Republican candidates.

III. The listed phone number for Stronger Wisconsin Fund is a Madison, WI phone number (608) 618-4680 even though the alleged address is in Eau Claire, WI.

IV. Matthew Fernholz is listed as an additional contact. He is a partner at Cramer Multhauf, LLP attorneys. Matthew Fernholz has personally represented Speaker Robin Vos in the past.

V. This is the same firm, Cramer Multhauf, that the Republican Party of Wisconsin paid $10,062.70 in compliance & administrative fees between November 30th, 2023, and March 18th, 2024.

VI. Robin Vos, through his personal campaign committee has also used the firm Cramer Multhauf, where Matthew Fernholz is partner, between April 27th, 2024, and June 20th, 2024, for a total of $27,766.70.

VII. Rachel Licht is listed as the treasurer. She lives in Waukesha, WI. Is she aware that her name is being used as the treasurer for this dark money group or is her name also being fraudulently used?

The Republican Party of Wisconsin and Speaker Robin Vos have stated that they do not get involved in Republican primary races. We believe the connections between Stronger Wisconsin Fund; The Republican Party of Wisconsin and Speaker Robin Vos are clear. We believe that The Republican Party of Wisconsin and Speaker Robin Vos have acted in bad faith, participating in election interference, against Conservative Republicans in primary races across the state of Wisconsin. Therefore, we are calling for the immediate resignation of Republican Party of Wisconsin Chairperson, Brian Schimming and Speaker Robin Vos. We demand a cease and desist of any further attack ads by Republicans, using Stronger Wisconsin Fund, against Wisconsin Republicans.

Contact WI The People at: strongestwisconsin@gmail.com to get email updates as they story is quickly evolving.

On August 5, 2024, a gathering of Assembly and Senate candidates, along with Republican County Chairs, came together to address concerns of dark money funds and outside interests allegedly working with the Wisconsin Republican party. These forces were accused of actively opposing grassroots conservative candidates who are challenging incumbent republicans in upcoming elections. The group in question, known as the "Stronger Wisconsin Fund," officially registered with Wisconsin on July 12 and has reportedly poured over $400,000 into the Republican primary race. Their efforts have been targeted at ten candidates who are running against established incumbent republicans.

Speaker of the Assembly, Robin Vos, has been suggested to have a hand in these efforts to prevent grassroots conservatives from succeeding in the primaries scheduled for August 13, 2024. Dark monies appear to be playing a key role in attempting to maintain the status quo and hinder the success of challenger candidates.

Local FOX News affiliate FOX6 shared the list of names of candidates affected by this dark money group.

Stronger Wisconsin Fund opposed these candidates in text messages, online ads, radio ads or campaign mailers:

Elijah Behnke
Darwin Behnke
Janel Brandtjen
Lindee Brill
Phil Collins
Nate Gustafson
Timothy Ramthun
Cory Sillars
Lori Jean Voss
Duane Wilson

Stronger Wisconsin Fund supported these candidates for Wisconsin Assembly:

David Armstrong
Calvin Callahan
Benjamin Franklin
Chanz Green
Brian Hilbelink
Karen Hurd
Brent Jacobson
Joel Kitchens
Dan Knodl
Kevin Peterson
James Piwowarczyk
Peter Schmidt
Michael Schraa
David Steffen
Robert Summerfield

Another day, another incident of corruption and the destruction of good conservatives in Wisconsin by corrupt Speaker Robin Vos, the same guy who backed the certification of the corrupt and fraudulent 2020 Election results for Joe Biden.
