Law professor on 'American Gulag' prisoners: Prosecutors, judges 'scared to death'

By WorldTribune Staff, December 12, 2021

As hundreds of Jan. 6 detainees remain in jail without bond, independent media and Republican members of Congress have documented the brutal treatment the detainees are subjected to at the D.C. jail, also known as the "American Gulag."

Former New Mexico State University law professor David Clements noted that prosecutors are "scared to death" of proceeding to trial against the detainees.

In a Telegram, post, Clements noted:

"Just finished a live chat with our political prisoners. The injustices being imposed by the judges and prosecutors are unheard of.

"My message. Fight. Take every case to trial. Get it before a jury.

"These bogus charges will unravel under the truth and an impartial fact finder.

"Remember, the real criminals were the FBI informants and undercover agents that created the false flag to

The real climate and health crisis

Anti-fossil-fuel climate policies increase energy prices, blackouts and death tolls

By Paul Driessen

Climate policies promoted and imposed by Team Biden and Democrats are based on junk science, headline-grabbing scare stories, and computer models that create far-fetched "scenarios" asserting that fossil fuel use and emissions will cause Earth to warm by 4 degrees C (7 F) over the next 80 years, and cause Arctic warming that will bring colder winters.

The mindless media should do their job when Biden weaponizes natural tornadoes

By Joe Bastardi

This is shorter than normal because it is so clear how out of touch he is in his weaponization of the Horrid Tornado disaster, which by the way occurred during what is a known "second season" partly because of the increase of the winter jet over areas where still warm moist air by the slower to cool gulf can supply energy. And they occur many times at night, I am sure he has no idea about that, given this statement which he is clueless over

"All I know is that the intensity of the weather across the board has some impacts as a consequence of the warming of the planet and climate change," Biden said. "The fact is that we all know everything is more intense when the climate is warming. Everything. And obviously, it has some impact here."

60,000 scientists call for an end to mass vaccination

By FrenchDailyNews

While the President of the French Republic meets this Monday, December 6, a new Council of Defense to fight against the spread of the epidemic of Covid-19, more and more voices are raised against the health policy completely crazy of the authorities which aims to vaccinate more and more the population. After the third dose of vaccine imposed, under penalty of deactivation of the health pass! There is now the question of vaccinating children from 5 to 11 years old. A decision that would be very serious according to many doctors and researchers that we have reported here.

Mass vaccination with a still experimental messenger RNA vaccine has long worried the scientific community. As of October 4, 2020, three high-level scientists, Prof. Martin Kulldorff, professor of medicine at Harvard University, biostatistician and epidemiologist, specializing in the detection and monitoring of infectious disease outbreaks and in the evaluation of vaccine safety. Dr. Sunetra Gupta, professor at Oxford University, an epidemiologist specializing in immunology, vaccine development and mathematical modeling of infectious diseases. And Dr. Jay Bhattacharya, a professor at Stanford University School of Medicine, a physician, epidemiologist, health economist, and public health policy expert specializing in infectious

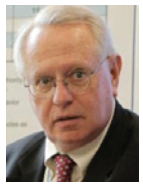
Feds Diminish State Sovereignty to Secure Unchecked Power



By William L. Kovacs

Part III of the series "Can the U.S Unite? If not, How Does It Divide?" addresses how the federal government, over a century and a half, amassed power by diminishing state sovereignty. It achieved this outcome by systematically manipulating the vagueness of the Constitution to eliminate the few constitutional restraints on its power. Now as the sole ruler of the nation, the lack of any check on federal power is resulting in national decline.

States retain the Constitutional right of self-government until feds diminish it

While the North's victory in

Steve's Say . . .

How Long Will Americans Tolerate Being A Conquered Country?

By Steve Welcenbach

The New World Order (NWO) formerly declared America as conquered on January 20, 2021.

While the NWO also controls the rest of the world, America remained the last stumbling block for implementing its vision of global totalitarian control. Because God's Law underpins America's founding, the concept of inherent unalienable human rights that come from the Creator, not government, separates America's charter documents from those of other nations.

Embedded within those unalienable rights, the right to own and utilize weapons to defend one's own life and body from attack continues to be the firewall even the most sinister globalist fears. So in trying to destroy this last impediment to the living Hell they wish to make reality they need to tread lightly, sneakily, not causing too much alarm too fast.

Unfortunately for these demonically possessed genocidal maniacs, the Lord God provided a miracle in the 2016 election which ruined their 16 year plan of America's dismantling. Donald Trump's presidency not only stopped them from moving their plan forward but he managed to extricate many of the bureaucratic poison pills they stealthily embedded in all 3 branches of the Federal government over the past 100+ years.

The hugely apparent success of the Trumpian policies unified most Americans, at least within economic circles, despite the constant barrage of mainstream media propaganda, lies and misinformation. No matter how hard the compromised Washington politicians and political insiders pushed the hate Trump narrative, his popularity and respect for his actions as president continued to soar. So much so that everyone knew, from all the Deep State players, fake pollsters, fake news propagandists and all elements of the Democrat Party, Trump would win re-election in a landslide. The criminal syndicate couldn't allow that to happen no matter what.

So they stole the election. Right in front of our eyes. We all saw it. We all knew it. And they dared us to do something about it, confident we never would. They would unleash their Big Tech censoring monster to quash any talk of election fraud as Conspiracy Theory and silence any politician willing to stand up for The People with their MSM bullhorn.

But like I've said to many people many times before, it is impossible for a bureaucrat or politician to outsmart the entrepreneur. And Donald Trump is the premier entrepreneur. Do you really think he and those standing with him would allow America to be conquered on his watch? Maybe you do. I sure don't.

Here's the reality of our situation. The federal government being showcased by the MSM today works in every way against the American people. This criminal syndicate owned and obviously fully controlled by foreign entities includes all Democrat and most Republican politicians in DC. Resident Biden, Kamala and all the rest constitute and army of placeholders and fillers put in their positions so they can keep the ruse going.

Now the Deep State, because of the Trump presidency, has two big problems: time and transparency. You see, Trump's presidency destroyed not only their timelines of implementation but also their cover stories which would allow them to deflect the blame for all of the impending destruction their plan creates. Now they have to move forward at lightning speed, laying bare the devastation to the people their actions create. So even the most blind believer in government integrity can not only see the destruction but can't deny its cause.

Luckily our Founders foresaw this day coming. The Declaration of Independence and Constitution remain our safeguards and roadmap to take back our conquered country.

America's conquering occurred over many years involving the betrayal of many people put into positions of authority and public trust. From the 1871 crime of converting the United States of America into a corporation whose asset base includes every citizen's personal lifetime productivity as contracted by their BIRTH CERTIFICATE (most unknowingly) to the formation of the Federal Reserve to issue fiat currency and hence ever expanding debt upon the nation. The US government supporting Hitler, communist Russia and basically installing the Communist Mao regime in China in 1949. The creation of the criminal enterprise United Nations by communist Alger Hiss and others, the foundational pillar of the NWO. The assassination of JFK by George Bush Sr. and CIA operatives, the removal of the gold standard by Nixon et al, the transfer of weapons technology by the Clintons and other vital national secrets to China and other rouge actors, the twin tower whatever-that-was, the planned and systematic destruction of America's manufacturing base, the intentional bankruptcy of family farms and ranches to corporatize food production, the complete destruction of personalized healthcare which we now see transforming the hospitals into the 2021 version of Hitler's gas chambers. All of this held together by a never ending merry-go-

round of bribery, extortion, blackmail and payoffs. And to top all of it off, remove every visage of God's grace and glorify the iniquities and atrocities of the Devil.

But anyone awake and aware sees clearly that these placeholders the conquering entities put in charge via election fraud have little power to do what they'd really wish to do. Like arrest Trump. Like jab every arm in the nation, multiple times in fact, maybe forever. Like put every Trump supporter in a detention camp. Like close GITMO. Somehow these pretend tyrants can't seem to get any of these things done, much less do anything to stop the impending economic meltdown their inflationary and social policies make a mathematical certainty. No, to quote from "Die Hard," the most renowned Christmas movie of all time, "from up here it doesn't look like you're in charge of Jack Shit!"

Certainly the Biden character is not in charge of anything. All directives come from his handlers above, probably Obama, the CCP certainly, and

"I choose gratitude and forgiveness over anger and bitterness. This allows me to see and appreciate the beauty and blessings in most everything."

- page 182 in "Something Beautiful is Going to Happen…"

Our Vision

We aspire to a world in which people, made in the image of God, reconciled to Him by Jesus Christ, and reflecting God's own creativity, work together to enhance the fruitfulness, beauty, and safety of the Earth, enabling more and more of our neighbors to enjoy good health, long life, freedom, justice, and spiritual and material abundance, for the glory of God and the good of our fellow man, thus fulfilling the two Great Commandments to love God and love our neighbor.

Our Mission

We seek to magnify the glory of God in creation, the wisdom of His truth in environmental stewardship, the kindness of His mercy in lifting the needy out of poverty, and the wonders of His grace in the gospel of Jesus Christ.

Our Identity

A coalition of theologians, pastors, ministry leaders, scientists, economists, policy experts, and committed laymen, the Cornwall Alliance is an evangelical voice promoting environmental stewardship and economic development built on Biblical principles.

The Facts: Reporters Exploit Normal Weather to Fan Climate Fear

By Vijay Jayaraj

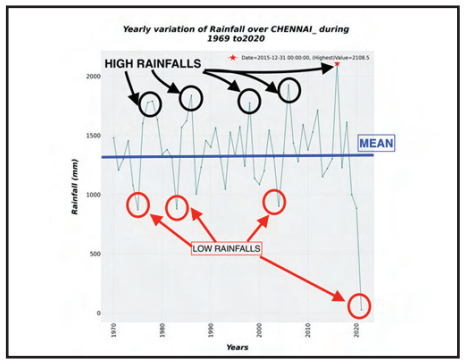
Exaggeration of weather events to sell climate crisis is not something new. In the case of a Sky News' account of flooding in one Indian city, my own observations — backed up by independent data — are contrary to the report.

Chennai — my home state's capital, formerly known as Madras — is prone to floods, whose severity I've personally witnessed. In fact, the last time Chennai flooded, I narrowly escaped by fleeing the city at the last hour. But, for me, that trauma does not make any more reasonable the media's melodrama about climate's role in floods.

The city is prone to yearly deluges from the strong northeast monsoon system during the months of October – January. This, coupled with poor planning and destruction of natural waterways, has led to an urban nightmare—frequent flooding.

However, Sky News' international Twitter report did not let the facts get in the way of its climate narrative. "Standing in knee-high water," the reporter said, "We know that as a result of our warming planet, we are going to see more radical and frequent shifts in extreme weather – extreme heat to extreme rain."

Except for a massive deluge in 2015, Chennai — located on India's southeastern coast — has had a relatively steady amount of rainfall since 1969. For example, yearly rainfall variation (in the image below) shows that years of both intense and light rainfall have been common for the city.



Data Source: Climate Data Service Portal, Indian Meteorological Department (IMD). Image Credit: IMD & Vijay Jayaraj

Monthly data for the city also show the sporadic nature of rainfall in the city with many high rainfall months since 1969. This means that intense downpours are not uncommon in the city.

Monthly Rainfall Variation since 1969 in Chennai

Data Source: Climate Data Service Portal, Indian Meteorological Department (IMD).

Speaking to Hindustan Times, a meteorological expert said, "These extreme rains have happened several times in the past, too. It is not due to any climatic change. The record for the highest rainfall in Chennai on a single day in November is still 1976."

The main reason for the flooding is the unplanned expansion of the city, which encroached on natural reservoirs and blocked key natural drains for rainwater. This is a well-established fact backed up by satellite imagery.

A 2020 report from the Indian Government, titled Assessment of Climate Change over the Indian Region, laid out a comprehensive analysis of various factors affecting the climate in the country. According to the report, a medium-range analysis of cyclone frequency in the North Indian Ocean Basin revealed a decrease in the frequency of severe cyclones between 1951 and 2018.

The data may be surprising to the reader because the mainstream media — like the Sky News journalist — regularly claim that extreme weather events increased in this period because of anthropogenic carbon dioxide emissions. But the reality is completely different.

"Long-term observations (1891–2018) indicate a significant reduction in annual frequency of tropical cyclones in the North Indian Ocean basin."

Figure: Annual Frequency of Cyclonic Storm (CS) and Severe Cyclonic Storm (SCS) between 1891 and 2016. Linear trend lines are indicated by dashed lines—black (1891–2018), blue (1951–2018), red (2000–2018). Also, the 10-year running mean is shown by a solid green line. Source: Extreme Storms, Indian Meteorological Department, Govt. of India. Published June 13, 2020

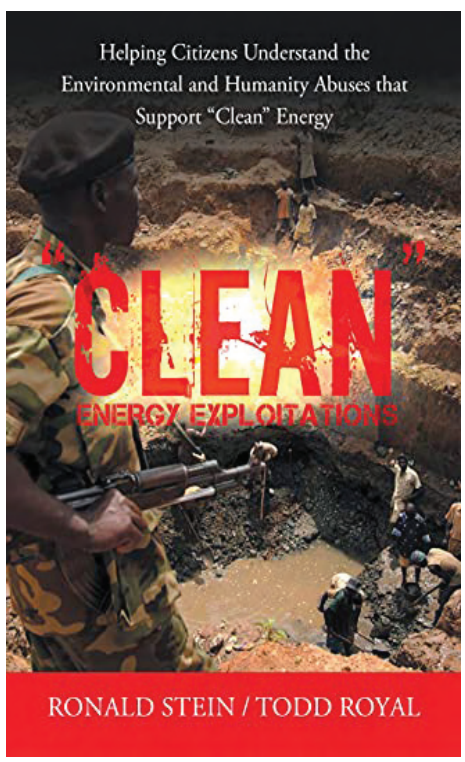
In addition, there has been no significant warming in the city since 2004. In fact, satellite measurements captured a global pause in warming between 2000 and 2020, a trend like that observed in Chennai.

So, rainfall, cyclone landfall, and temperature have shown no dangerous increase in the city of Chennai. This case of interweaving the theory of climate crisis into a normal weather event by Sky News is typical of mainstream media. Either Sky News assumed its international viewers were unlikely to research the real reasons behind the flooding, or the news channel is ignorant of the facts itself.

We recommend applying a healthy dose of skepticism to assertions of climate-induced weather events. You also might want to follow more responsible outlets for your facts, such as the CO2 Coalition.

This piece was originally published at the CO2 Coalition. It is republished here with permission.

How "Renewable Energy" Leads to Human Atrocities and Environmental Degradation

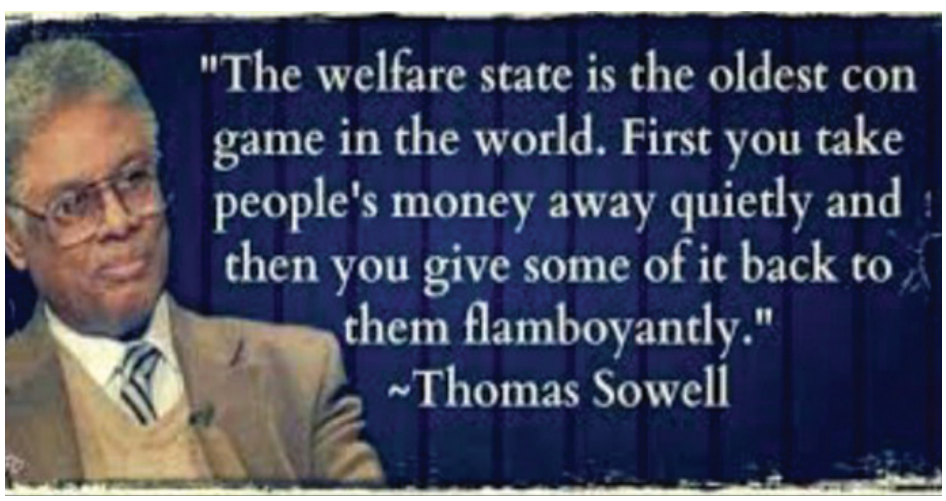


By E. Calvin Beisner

By now everybody's observed virtue signaling by proponents of wind and solar energy.

The usual critiques focus on these energy sources' inability to provide the massive amounts of instant-on-demand, reliable, non-intermittent, affordable energy needed to lift and keep whole societies out of poverty.

But there's a dark secret behind wind and solar: Mining and refining the minerals necessary to build wind turbines and solar panels causes far more harm to the environment, per unit of energy delivered to users, than mining and refining coal, oil, or natural gas, and it's accompanied by severe human atrocities.



The Heartland INSTITUTE
Ideas that empower people

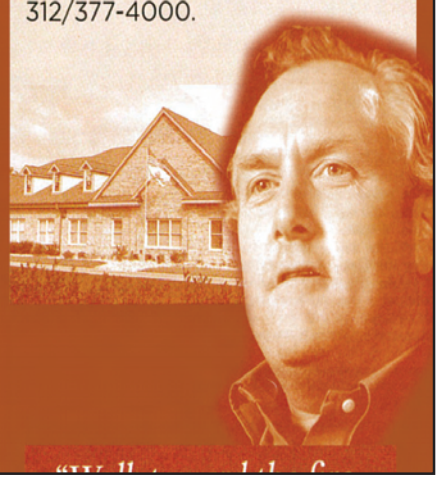
ANDREW BREITBART FREEDOM CENTER AT THE HEARTLAND INSTITUTE

On March 1, 2016, on the fourth anniversary of his death, The Heartland Institute dedicated the public meeting space in its new home in Arlington Heights in honor of Andrew Breitbart.

The Andrew Breitbart Freedom Center is a state-of-the-art meeting facility with seating for 75. Events are scheduled to take place every week in the space, featuring authors of new books, freedom activists and thinkers, and civic and business leaders.

"Andrew Breitbart was a genuine American hero," said Joseph Bast, president of The Heartland Institute, in a video announcing the dedication. "He inspired millions of people to stand up and speak the truth about what is happening in America. We could not be more pleased to have his name forever affixed to The Heartland Institute. We are honored that his family and friends believe this is a suitable addition to his legacy."

For more information about the Andrew Breitbart Freedom Center, please contact Nikki Comerford at ncomerford@heartland.org or 312/377-4000.



The Heartland Institute is a national nonprofit research and education organization devoted to discovering, developing, and promoting free-market solutions to social and economic problems.

Wrong again Biden: Tornadoes are weather, not climate

By Craig Rucker

Devastating tornadoes struck America's heartland Friday night leaving death, destruction and heartache in their trail.

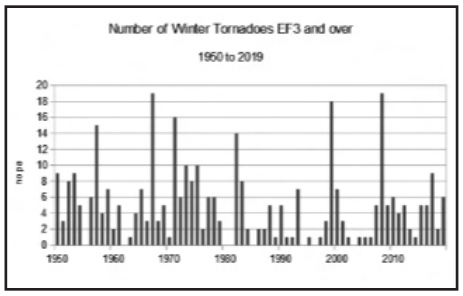
When asked whether the tornadoes were due to climate change President Biden replied, "Everything is more intense when the climate is warming and obviously it has some impact here."

CFACT's Marc Morano reports at Climate Depot that weather and climate experts were shocked by the President's misstatement. These tornadoes were tragic, but were natural weather, not climate. Marc is currently scheduled to appear tonight on Fox News Primetime at 7:00 PM EST.

• Weather expert Chris Matz said, "this is utter bullsh*t... Here are the facts: No overall trend in U.S. tornado activity since 1954, but EF-3+ down 50.

• Climate scientist Dr. Roy Spencer said, "To claim 'global warming' as cause for tornadoes 'is directly opposite to the clear observational evidence.'"

• Extreme weather expert Dr. Roger Pielke, Jr. noted that the UN IPCC report



states, "Trends in tornadoes... associated w/ severe convective storms are not robustly detected ... attribution of certain classes of extreme weather (e.g. tornadoes) is beyond current modeling and theoretical capabilities."

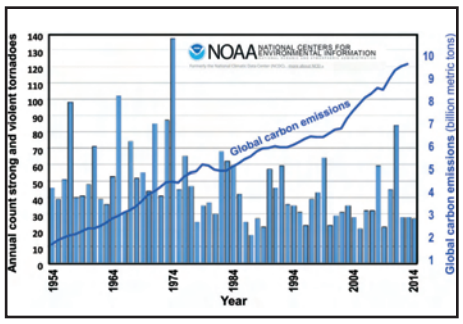
• Tony Heller who runs the Real Science blog said in a video: "History and science aren't among Joe Biden's strong points."

• Legendary forecaster Joe Bastardi posted at CFACT.org that if "that's all Biden knows, the chart from NOAA shows he knows next to nothing."

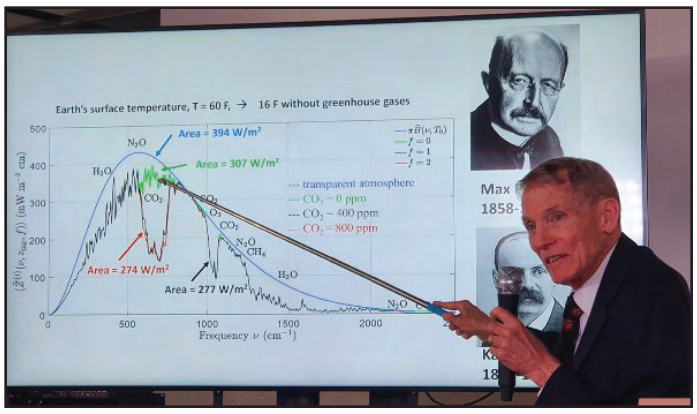
When natural disaster strikes it calls upon the best in all of us to help those in need.

Exploiting natural tragedy to push a political agenda is wrong.

P.S.: Saule Omarova, President Biden's radical pick for Comptroller of the Currency, has withdrawn her candidacy. Statements by Omarova that she would like to see energy companies go bankrupt, and her advocacy for nationalizing deposit bank accounts, showed just how unfit she was for the post. President Biden should nominate a solid candidate focused on stabilizing our currency and getting inflation under control.



CLINTEL NEWSLETTER - Friday, December 3, 2021



William Happer in The Netherlands: "More CO2? Yes, please!"

William Happer, one of the most well-known climate optimists/realists in the world, visited The Netherlands on November 15 and 16, on the invitation of CLINTEL. Happer is a physicist, professor emeritus at Princeton University, former (climate) advisor in the Trump Administration and founder of the US thinktank the CO2 Coalition.

Happer gave a CLINTEL Lecture (full talk with Dutch subtitles) in Amsterdam in which he restated that extra CO2 is no problem for the climate and for humanity. He even thinks that it is beneficial because of the positive effects on plant growth and agriculture.

He also spoke about this theme in two interviews he gave during his visit. The first one, done by public broadcaster Ongehoord Nederland, can be found here. *The second one, by De Groene Rekenkamer, can be found at clintel.org*

"What's happening at our universities?"

The major Dutch newspaper De Telegraaf has published a letter to the editor by CLINTEL president Guus Berkhout in which he criticizes universities: "My own university, TU Delft, has recently adopted the fashionable label 'climate university'. This university also indoctrinates its students by telling them that there is a man-made climate crisis that must be solved with solar panels, windmills and biomass plants. Criticism is not tolerated. But I say to the Board of Governors, surely the university must be a sanctuary for the unbiased exchange of knowledge? How free is the discussion at TU Delft if everyone is pushed into an ideological straightjacket?"

"But the worst is yet to come. TU Delft has just announced that it will award EU Vice President Frans Timmermans an honorary doctorate, because of the extraordinary achievements he has made with his energy transition policy. But I say to the Board of Governors, Frans Timmermans has done untold damage with his energy policy! He is the great champion of biomass plants, which have been destroying unique ecosystems for many years by massive logging. Timmermans also believes that sustainability can be achieved with windmills. A technical university such as TU Delft knows perfectly well that such a policy is technically and scientifically nonsensical!"

"Partly due to Timmermans' policy, energy prices are skyrocketing. And then grant such a person an honorary doctorate? It is an insult to all Delft alumni."

ICSF sends letter to Irish government leaders

On November 29th, our colleagues at the Irish Climate Science Forum (ICSF) sent a letter to the Irish government leaders in reponse to the Irish Climate Action Plan: "ICSF sees that the Government is set to embark on a Climate Action Plan which, though well intentioned, is unfortunately misinformed on many scientific, engineering and economic aspects. This misinformed situation has arisen due to "group-think" predicated on an imagined "climate emergency."

The letter follows the trilogy of letters aimed at politicians, young people and scientists respectively, with which CLINTEL made itself heard in Glasgow.

Read the full letter of the ICSF and a short intro: clintel.org

The Electric Highway – A Fuelish Policy

By Viv Forbes

Scott Morrison has had another green brainwave – spend a zillion dollars to build Australia's electric/hydrogen highway. Naturally this Fuelish Policy will be supported and accelerated by the Greens/ALP coalition.

They all need to study the history of transport in Australia.

Soon after the First Fleet landed, explorers, prospectors and settlers headed inland seeking grasslands, timber and minerals. Often they followed ancient aboriginal trade routes to discover the best waterholes, river crossings and gaps in the ranges. No governments surveyed their routes, graded their roads, or established stores of hay, grain, water and billy tea along the tracks to re-charge the batteries of their horses, donkeys, bullocks, passengers and drivers.

Feeling left out of this exuberant private road creation, financed mainly by gold, copper, wool and butter, colonial governments rushed to join the steam railway revolution then sweeping the world. Enterprising Americans opened their Transcontinental Railway in the 1860's, crossing 12 states with one rail gauge to link Atlantic and Pacific America. In Australia, private companies started building rail lines in the 1830's but instead of standing aside to let it happen, as America did, parochial Australian politicians and their friends saddled us with three main railway gauges - "Narrow" in Queensland, "Standard" in NSW and "Broad" in Victoria. All were powered by hydrocarbons – coal, wood, oil, diesel-powered electric and coal-powered electric.

Then governments allowed/encouraged unions to gain control of the railways, so service declined, payrolls and costs rose and profits evaporated.

Beside this planned chaos in Australian railways, one private entrepreneur, Freeman Cobb, established his Cobb and Co Coach Service from Melbourne to the goldfields in 1854, doing it in half the time taken by its competitors. No bureaucrats set their routes or approved their plans. Cobb's main plan was "Follow the Gold". No governments established his horse refuelling stations and no coach line ended at a state border. By the 1870's, Cobb and Co covered over 11,000 km of routes from Cooktown to Southern Victoria, with fresh horses and fuel for drivers, passengers and horses every 20 km or so.

Then the Model T Ford and the internal combustion engine ended the horse-coach era (and also drove the first electric cars off the road). No bureaucrats planned or subsidised the establishment of the re-fuelling stations for the petrol and kerosene driven cars, utilities, trucks and tractors that followed the Model T.

Meanwhile, Australian drovers moved stock up and down the great stock routes, trying to follow the storms that refreshed their grass-powered refuelling stations. One enterprising drover, Sidney Kidman (later known as "The Cattle King"), established a string of stations used to refuel his cattle as he moved them across the continent from the channel country in Queensland to sale yards near Adelaide. No bureaucrat planned his business.

But slowly, without political plans or subsidies, diesel trucks and road trains replaced most drovers by providing a quicker service less dependent on the weather. And cities grew as food supplies improved and farm labourers got jobs in growing mining, processing and manufacturing industries.

But today's politicians want to force an electric/hydrogen road revolution. They casually brush aside questions as to who will establish the charging-fuelling stations, who bears the cost of the subsidies and where the reliable energy will come from when diesel, gas and coal are heavily taxed and nuclear energy is banned.

Here is an Australian Cattle Train of the future:

https://saltbushclub.com/wp-content/uploads/2021/12/electric-highway.jpeg

Permission is granted to reproduce this cartoon (without alteration).

Electric/hydrogen cars should reduce suburban noise and improve city air quality but users should fund their own recharging centres and insurance, and all road users should contribute fairly to the costs of road building and maintenance.

However, a political rush-job to abandon coal and petroleum fuels, together with all their engines, generators and supply chains would be a mammoth and high-risk undertaking. To combine this with the task of planning, funding and building a new transport network based on intermittent green energy, electric engines, batteries and hydrogen is just green fantasy.

This LNP dreamtime electric/hydrogen highway is destined to become the largest ever green flop in our net-zero era. Its foolishness and waste will far exceed the colonial rail gauge mess, the subsidised wind/solar mania and the ALP pink batts scheme.

And if the ALP/Green Coalition wins the next election, this energy/transport disaster will visit us sooner.

CLINTEL NEWSLETTER

Climate, elites, entropy and wealth

Greek scientists Demetris Koutsoyiannis and G.-Fivos Sargentis of the National Technical University of Athens have published their view on the subject of entropy and wealth. It is also relevant to the current climate panic: "The advancement of technology and average wealth are the positive side of elites' action, but this is hardly understandable by people. For this reason (and possibly other reasons too), elites use different means to make their actions more efficient and acceptable within the society. These include overstating existing or non-existing threats, and then presenting themselves as philanthropists (e.g., by funding nongovernmental organizations dealing with these threats) and world saviours. The means by which the elites increase their profits certainly include political power, and more recently, an attitude of world control. Apparently, if they succeed in controlling the world, this will decrease entropy and hence delimit freedom. In turn, it will lead to decadence, the signs of which are already visible in the Western world."

Read the full article by Koutsoyiannis and Sargentis: clintel.org

"Climate debate is entering a new phase"

In his online talk for the Irish Climate Science Forum and CLINTEL on December 1st, Benny Peiser, director of the Global Warming Policy Foundation, called attention to the above 1972 figure about the "issue attention cycle". According to Peiser we are just entering – at least in the UK – phase 3 of this cycle in which people start to realise the cost of the policies (since the start of the IPCC we are in phase two in which there is "alarmed discovery and euphoric enthusiasm").

However, now mitigation policies are implemented, people are starting to feel it in their pocket. In England this winter, especially when it will be a cold one, lots of people will literally sit in the dark and cold in their houses, unable to pay the bills. Peiser sees a new movement coming up, including tens of MP's who want to scrutinize the costs of going to Net Zero. Peiser also noticed that he is approached much more by the media than a few years ago. The media is picking it up, they have to.

How long the third phase of the issue attention cycle will last is impossible to predict. It could definitely take ten years at least. So skeptics who hope for a sudden change in the atmosphere surrounding climate change will need to be patient.

Read the full article, including the link to the presentation by Peiser: clintel.org

World Climate Declaration

The number of signees of the CLINTEL World Climate Declaration (WCD) keeps growing. There are now more than 950 signees from 37 countries.

A notable new signer is Lex A. van Gunsteren, Marine propulsion expert, former director of Corporate Planning and R&D of the Royal Boskalis Westminster Group, former professor of Technology at TU Delft and Erasmus University.

Another one is Joseph Reynen, Finite Element Modeling Expert, Retired from EU Joint Research Centre in Ispra, Emeritus Associate professor TU Delft

The Gospel's Relevance to Atrocities Done in the Name of Climate Change

By Dr. E. Calvin Beisner

On Cornwall Alliance's From the Stacks livestream December 7, 2021, Dr. Cal Beisner interviewed Ron Arnold and Todd Royal, authors of the book Clean Energy Exploitations. In part of that interview, Royal emphasized that slave and child labor in mining and refining rare earths for wind and solar energy is, with abortion and infanticide, one of the greatest human rights issues facing the Christian church. We hope you'll watch the video and share it with many, especially young Christians, who may not be much concerned about energy policy or who might have embraced calls for wind and solar to replace fossil fuels to fight climate change, without knowing that wind and solar depend in large measure on human rights abuses.

Citing the Magna Carta and America's Declaration of Independence as examples, Royal explained that the gospel has led to liberty wherever it has prevailed.

But today, millions of Uighurs are enslaved by the Communist Chinese government to mine and refine rare earth minerals for use in wind turbines and solar panels to satisfy the demands of wealthy Westerners, while thousands of women and children are enslaved in the Congo mining cobalt for the same purposes. Similarly oppressive, if not so obvious, copper mining in Chile brings toxic water pollution affecting the poor of that area.

"That goes against every part of the Dominion Mandate," he said, "and it certainly goes against every part of the Great Commission that Christ gave us."

'Frightening story': Updated VAERS data shows children, teens dying from Covid vaccines

By WorldTribune.com, 12/05/2021

Children survive Covid at close to a 100 percent rate, yet Team Biden and corporate/media allies continue to push the vaccines on kids as young as five.

According to the latest data from the Vaccine Adverse Event Reporting System (VAERS), 2,586 adverse events, including 34 rated as serious and 2 deaths due to the vaccines were reported in the 5- to 11-year-old age group.

One death occurred in an 11-year-old girl from Georgia who was vaccinated on Sept. 14. The second death occurred in a 5-year-old girl who died four days after receiving her first dose of Pfizer, according to VAERS.

In the 12- to 17-year-old age group, 23,871 adverse events, including 1,453 rated as serious and 31 deaths were reported to VAERS.

The most recent death involves a 16-year-old girl from Georgia who reportedly died from a heart condition and multi-organ failure two days after receiving Pfizer's COVID vaccine.

Also reported in the 11- to 17-year-old age group:

• 60 reports of anaphylaxis where the reaction was life-threatening, required treatment or resulted in death — with 96 percent of cases attributed to Pfizer's vaccine.

• 63 reports of myocarditis and pericarditis (heart inflammation) with 553 cases attributed to Pfizer's vaccine.

• 139 reports of blood clotting disorders, with all cases attributed to Pfizer.

Overall, 19,532 people have died from the Covid vaccines and 146,720 suffered serious injuries as a result of the jab, according to VAERS.

The CDC on Dec. 3 released the new data which show a total of 927,740 reports of adverse events following Covid vaccines were submitted between Dec. 14, 2020, and Nov. 26, 2021.

"VAERS is telling a very frightening story," data scientist and immunology researcher Jessica Rose, Ph.D. told author Robert F. Kennedy, Jr.

That data does not include the under-reporting factor, she said. "It's really staggering. We're in the millions."

Excluding "foreign reports" to VAERS, 672,373 adverse events, including 8,986 deaths and 57,143 serious injuries, were reported in the U.S. between Dec. 14, 2020, and Nov. 26, 2021.

Foreign reports are reports received by U.S. manufacturers from their foreign subsidiaries.

SCIENCE & ENVIRONMENTAL POLICY PROJECT

The Week That Was December 11, 2021

Quote of the Week:

"It is as fatal as it is cowardly to blink facts because they are not to our taste."
– John Tyndall, 1877.

****

Number of the Week:

15 States

****

THIS WEEK:

By Ken Haapala, President Science & Environmental Policy Project (SEPP)

Scope: Last week, TWTW focused on the CLINTEL lecture William Happer gave in Amsterdam. The lecture is important because it presents evidence that the total approach used by the UN Intergovernmental Panel on Climate Change (IPCC) and its followers including many US science institutions is wrong if the goal is to calculate the influence of increasing greenhouse gases on temperatures. If the goal is frightening the public to raise money, then the approach may be successful.

This TWTW will address the issue somewhat differently. In a podcast, Meteorologist Cliff Mass explains why he thinks that the climate models with non-linear equations can be used to forecast the future climate even though such models cannot successfully forecast the weather two weeks into the future. The views of Mass deserve consideration because he has been critical of many of the tricks used by the climate establishment such as "Fractional Attribution of Risk" (FAR), also called "Optimal Fingerprinting."

Also, this TWTW will discuss the Happer presentation in light of what blogger Ron Clutz calls "Five Lines of Evidence Against GHG Warming Hypothesis." The critical issue is understanding what is occurring in the atmosphere where greenhouse gas warming occurs. What is occurring on the surface may or may not reflect what is occurring in the atmosphere. The approach of the IPCC and its followers of using surface-air temperature data (measurements about shoulder height) is a poor approximation of atmospheric temperature trends.

Also briefly discussed are some of the actions by the Biden Administration to "combat climate change" which will inevitably increase energy prices in the US. These receive great press, but the press is not paying the energy bills of the public. Plus, it would be careless not to mention that in litigation the attorneys for Facebook fact checkers wrote that its fact-checking is opinion not fact!

Can Climate Models Forecast? In his podcast Cliff Mass asserts that unlike weather models which cannot forecast beyond two weeks, climate models can. Weather prediction is specific, and (with chaos theory) non-linear complex systems like the atmosphere rapidly lose predictability over time.

Mass asserts that climate predictions are different than weather prediction – they do not predict the exact state of the atmosphere at a particular time, but they predict the average conditions over time. He states that climate is highly controlled by the input and output of energy in the atmosphere: how much solar radiation is going in, how much radiation (infrared) is going out.

And he further states that the outgoing radiation is dominated by the composition of greenhouse gases in the atmosphere. Thus, he asserts that models can provide excellent guidance.

However, there is uncertainty in the models, including the amount of greenhouse gases and particles in the air (aerosols). Further there are known problems with clouds and precipitation, and with natural variability such as the El Niño Southern Oscillation (ENSO), convection, and thunderstorms. Nonetheless, Mass states that climate predictions make sense but those making predictions/forecasts must recognize the uncertainties.

Mass gives a good overview from the standpoint of one who understands weather prediction and the limits of predictions. However, one of the very important items he does not mention is how changing concentrations of each greenhouse gas interact with other greenhouse gases and how these changes in turn change the outgoing radiation. Understanding these changes entails an understanding of spectroscopy and quantum theory, which Mass may not recognize. Spectroscopy was developed to understand the interaction between electromagnetic energy (light energy) and matter such as molecules of greenhouse gases. Quantum theory was developed to explain these experimental observations.

As shown by William Happer, the effectiveness of carbon dioxide as a greenhouse gas is lost at the current concentrations. In fact, the effectiveness is lost at concentrations well below the concentrations required for many living plants. This loss of effectiveness is called saturation. It is similar to a sponge full of water, which cannot absorb much more. (Or very humid air which is called saturated because it cannot absorb any more water at a given temperature.)

Further, Mass does not mention water vapor, which was recognized as the dominant greenhouse gas by greenhouse pioneer John Tyndall who began his experiments using early spectroscopy in 1859. Water vapor changes the effectiveness of all other greenhouse gases, especially methane. Thus, projecting the composition of the atmosphere into the future is largely meaningless unless one takes into account the changing effectiveness of all the greenhouse gases with changing composition. However, the climate models used by the IPCC do not. By relying on surface-air temperatures, the IPCC modeling effort confuses the changing greenhouse effect with other human effects and natural influences, and its predictions become essentially meaningless.

Four Ways to Failure? Following his post on the Happer lecture, Ron Clutz posted "Global Warming Theory and the Tests It Fails 2021" which updates previous posts on that subject. Clutz states a hypothesis that may state the claims of the IPCC. TWTW will not get into the hypothesis because the IPCC does not state one and any proposed hypothesis can be claimed not to be true by some of the IPCC followers. What is interesting is the five different studies that Clutz brings up countering the IPCC findings that human CO2 emissions will have a significant influence on global temperatures. Four of these studies are discussed below. The fifth deals with planetary motion and is beyond the scope of this TWTW.

The first three studies rely on radiosonde balloon studies and Clutz explains what goes up on a radiosonde balloon launch. According to Clutz"

In 2004 Ferenc Miskolczi studied the radiosonde datasets and found that the optical density at the top of the troposphere does not change with increasing CO2, since reducing H2O maintains optimal radiating efficiency. His publication was suppressed by NASA, and he resigned from his job there. He has elaborated on his findings in publications as recently as 2014.

Clutz links to a more complete description of what happened to Miskolczi at NASA. The second of the four studies was by Ronan and Michael Connolly on radiosonde data in 2014. It concluded:

"It can be seen from the infra-red cooling model of Figure 19 [not shown] that the greenhouse effect theory predicts a strong influence from the greenhouse gases on the barometric temperature profile. Moreover, the modeled net effect of the greenhouse gases on infra-red cooling varies substantially over the entire atmospheric profile.

"However, when we analysed the barometric temperature profiles of the radiosondes in this paper, we were unable to detect any influence from greenhouse gases. Instead, the profiles were very well described by the thermodynamic properties of the main atmospheric gases, i.e., N 2 and O 2 , in a gravitational field."

"While water vapour is a greenhouse gas, the effects of water vapour on the temperature profile did not appear to be related to its radiative properties, but rather its different molecular structure and the latent heat released/gained by water in its gas/liquid/solid phase changes.

"For this reason, our results suggest that the magnitude of the greenhouse effect is very small, perhaps negligible. At any rate, its magnitude appears to be too small to be detected from the archived radiosonde data Pg. 18 of referenced research paper." [not shown]

Again, Clutz has a link to a more complete discussion. The third paper is John Christy's testimony on March 29, 2017, to the House Committee on Science, Space and Technology. It features a graph that actually appeared in the Fifth Assessment Report of the IPCC (AR5, 2013). The graph clearly shows that IPCC models without greenhouse gas components more closely follow the observed vertical tropical temperature trends from 1979 to 2010 than the IPCC models do when they include the greenhouse gas components. Until roughly above 40,000 feet, the warming forecast in the model trends with greenhouse gases greatly exceeds the warming observed in the atmosphere. It makes no difference how good the physics behind the models is, if they are used to forecast the effect of greenhouse gases, they must get the influence of the gases correct. They do not.

The fourth study is from the presentation by William Happer discussed in last week's TWTW. This relies on five instruments on three satellites in the Clouds and the Earth's Radiant Energy System (CERES) program designed to measure changes in electromagnetic radiation at the top of the atmosphere: how much radiation is coming in at the top of the atmosphere and how much is going out. If greenhouse gases are causing dangerous global warming, we should be seeing a striking increase. We are not seeing it. There is variation but no trend. Clutz gives a lengthy description of what is not occurring. He uses both the older Earth Radiation Budget Satellite (ERBS) data that began in 1984 and the CERES data that began in 1997.

Clutz reproduces Happer's important graph showing how different greenhouse gases influence outgoing radiation. Due to triggering spam-blockers, the graph is reproduced in this TWTW on the SEPP website but is not in the text.

The green line in the graph shows what would be radiated to space if there were no carbon dioxide and the world would be colder. The black line shows what is radiated to space with a CO2 concentration of 400 ppm (parts per million volume) slightly less than this year's concentration.

Clutz writes:

"The important point here is the red line. This is what Earth would radiate to space if you were to double the CO2 concentration from today's value. Right in the middle of these curves, you can see a gap in the spectrum. The gap is caused by CO2 absorbing radiation that would otherwise cool the Earth. If you double the amount of CO2, you don't double the size of that gap. You just go from the black curve to the red curve, and you can barely see the difference. The gap hardly changes.

"The message I want you to understand, which practically no one really understands, is that doubling CO2 makes almost no difference."

Tornadoes: Several late season tornadoes hit Kentucky and neighboring states in the evening of December 10 and the morning of December 11. As Joe Bastardi of WeatherBELL Analytics explains that late season tornadoes often occur at night, when people are not as alert to tornadoes as during the day. Contrary to claims of some, late season tornadoes are not the result of global warming.

Number of the Week – 15 States: In an essay about the problems with implementing the goals of COP 26, Francis Menton writes that the treasurers of 15 states wrote the US banking industry they will protest banks that cut-off funds to coal and oil industries by withdrawing all state funds in those banks.

The Science & Environmental Policy Project began in late 1990 as a research effort by atmospheric physicist S. Fred Singer and a handful of graduate students working out of a small office in downtownWashington, D.C.The Project had two goals: (1) to gather material for a book on global environmental issues,and (2) to conduct a survey of scientists affiliated with the UN Intergovernmental Panel on Climate Change to determine the extent of what was, even then, being touted as scientific "consensus" on global warming.

What the graduate students discovered with their survey convinced Dr. Singer to set his book aside and instead to circulate among senior members of the American Meteorological Society a "Statement by Atmospheric Scientists" on greenhouse warming, which was quickly endorsed by 46 leading climatologists and atmospheric physicists (and eventually by nearly 100). That statement, issued on February 27, 1992, drew widespread media attention and was cited more than 150 times in the press. It was the first inkling journalists had that there was no scientific consensus on the reality of a global warming. Indeed, there was raging debate.

The Science & Environmental Policy Project was incorporated in the state of Virginia in 1992, and established as a nonprofit, 501(c)3 educational organization in late 1993. Today, having expanded from that core of 46 scientists, it draws on an international network of some of the finest minds in science who donate their time to promoting sound, credible, peer-reviewed research as the only basis for the health and environmental policies that affect us all.

You can help in two ways:

1. Download SEPP reports, press releases, and articles and pass them on – to newspaper editors, journalists, educators, civic leaders, and others. Help stop the fearmongering and the distortion of science.This is the most important thing you can do.

2. Support SEPP with your tax-deductible contributions. The environmental pressure groups, which present so much wrong information, have a combined clout of more than $1 billion a year.The Science & Environmental Policy Project has had far-reaching impact on less than one-hundredth of one percent of that figure. It's money well and effectively spent.

Send your contributions to:

And thank you.

climate and health crisis

continued from page 1

Those dire predictions are used to justify more taxpayer-funded "research," like a recent Columbia University "mortality cost of carbon" study that claims 83 million people (the population of Germany) "could be killed" this century by those rising planetary temperatures. Therefore we must take "immediate action" to "transform" our energy and economic systems, and replace oil, gas and coal with (millions of) wind turbines and (billions of) solar panels and backup batteries.

These policies are lethal for people and planet They would require mining on scales unprecedented in human history, much of it by slave and child laborers, and nearly all using fossil fuels – bringing massive habitat and wildlife losses, air and water pollution, and horrific human health and safety problems.

But since most of the mining, ore processing and manufacturing will occur in other countries, far from the USA, politicians and climateers can say this "alternative energy" is "clean and green."

Worse, climate policies cause widespread "energy poverty" – energy prices rising above families' ability to stay adequately warm (or cool) at reasonable cost, given their incomes. That means peopledie.

Modern housing and energy systems enable people to adapt to and survive even extreme heat and cold – even in Antarctica, which recently had the coldest winter temperatures ever recorded: -61 degrees C (-78 degrees F). However, adaptation and survival become nigh impossible when government policies make it hard to heat or cool homes properly amid joblessness, inflation and soaring oil, natural gas, coal and electricity prices.

Indeed, it is often on the coldest and hottest days and nights, when heating or cooling are most essential, that winds blow at inadequate speeds to turn turbine blades and/or the sun shines with inadequate intensity on solar panels, to generate electricity. This (and wind and solar variability in general) results in recurrent blackouts and necessitates "backup" energy: coal, natural gas, diesel, hydroelectric or expensive battery systems, which significantly increase energy costs and worsen energy poverty, illness and death.

Proposed Biden/Democrat Green New Deal policies would require that still perfectly good natural gas furnaces, water heaters, ovens and stoves be replaced with costly heat pumps and electric appliances, powered by expensive, unreliable, weather-dependent wind and solar systems. They would necessitate installing charging stations for electric cars, upgrading home and neighborhood electrical systems to 220 volts, and having pricey battery "power walls" for backup power during increasingly frequent blackouts.

All this would cost trillions of dollars, with families and small businesses bearing the brunt.

Contrary to faulty global warming "research," far more people die in cold weather than in hot summers. In the United States and Canada, cold causes 45 times more deaths per year than heat: 113,000 from cold versus 2,500 from heat. Worldwide, with air conditioning far less available in already hot countries than in the United States, some 1,700,000 people die annually from cold versus 300,000 from heat.

A 2014 Public Health England University College of London Institute of Health Equity report underscores how energy poverty severely, disproportionately and inequitably affects poor, elderly, fixed-income and minority families – resulting in numerous, needless illnesses, health problems and deaths.

Cold homes cause or exacerbate risks of asthma, bronchitis, flu, cardiovascular disease and other adverse health conditions. Cold temperatures also increase depression, anxiety and other mental health problems, intensifying medical and physical issues. Young children, older people, those with preexisting health conditions and other vulnerable groups are especially susceptible to hypothermia, illness and death.

The Health Equity Institute calculated that one-tenth of all "excess winter deaths" in England and Wales are directly attributable to fuel poverty, and 21% of excess winter deaths are attributable to the coldest 25% of homes. Between 1990 and 2014, researchers estimated, 30,000 to 40,000 people died each year who would not have perished if their homes hadn't been so cold. US studies reach similar conclusions.

Adjusting for population, but not for colder winter temperatures in much of the USA (versus England and Wales), this is equivalent to some 170,000 to 230,000 excess winter deaths per year in the United States.

In 2019, 344,000 German families had their electricity cut off because they couldn't pay their power bills.

Still worse, coal, oil, natural gas, electricity and home heating costs have skyrocketed since those English, US and German reports were prepared – because of shortsighted, climate-obsessed, callous policies.

Global demand for gas and coal surged as the world recovered from Covid – but Britain and Europe banned fracking for gas in their enormous shale deposits, Germany is shutting down its nuclear plants, Russia is playing politics with gas deliveries, and UK and EU wind turbines generated far less electricity in 2021 (way below their supposed, "nameplate capacity") due to unfavorable winds.

No wonder 65% of United Kingdom renters are struggling this year to pay their energy bills, 25% of Scots live in energy poverty, and 400,000 more UK households are on the brink of losing their gas and electricity provider before Christmas. Europe's energy costs hit new records, and millions of UK households face 70% rise in energy bills. Excess winter death tolls will also likely set new records.

That's happening in America too, as the Biden Administration stymies leasing, drilling, fracking and pipelines, and sends gasoline and food prices rocketing upward, amid the highest inflation rate in 39 years.

Climate policies will also exacerbate health risks in hospitals. At 13¢ per kilowatt-hour (average US business rate today) a 650,000-square-foot hospital building would pay about $2.5 million annually for electricity. At 27¢ per kWh (Britain's pre-October average), the annual cost jumps to $5.2 million; at 39¢ per kWh (Germany's earlier average), to $7.5 million! Those soaring costs would bring chillier conditions, employee layoffs, higher medical bills, reduced patient care, and more deaths.

Consider too that one-third of American families already had difficulty six years ago adequately heating and cooling their homes, and one-fifth of U.S. households had to reduce or forego food, medicine and other necessities to pay their energy bills. Even before COVID, low-income, Black, Hispanic and Native American families were spending a greater portion of their incomes on energy than average households.

Impacts on hard-pressed working families and people on fixed incomes would be just as harmful and disproportionate, as they too spend a greater portion of their limited incomes on energy.

Job destruction, energy poverty, illness and deaths would increase dramatically under anti-fossil-fuel policies mandated and imposed by the Biden Administration and fellow Democrats – in the name of fairness, equity and "climate justice."

Those policies would also make America's energy, economy, national security and foreign policy increasingly dependent on China – already the world's biggest coal user and greenhouse gas emitter – in an increasingly dangerous world. That's because China controls most of the metals and minerals required by "green" energy and modern transportation, communication and defense technologies.

This is The Real Climate Crisis. The ecological destruction and human death tolls should shock all of us.

They aren't due to climate changes that are mostly natural, weather events that are no more frequent or extreme than over the previous century, or manmade global warming that exists almost solely in computer models that rely on junk-science greenhouse-gas hypotheses. The real climate crisis is due to policies that are being rammed through on the basis of false premises, fear-mongering and intolerance for fossil fuels.

Congress, courts, states and voters must act now, to reverse the damage that climate and "green" energy policies are having on our economy, jobs, health, well-being, wildlife and environment.

Paul Driessen is senior policy analyst for the Committee For A Constructive Tomorrow (www.CFACT.org) and author of books and articles on energy, environment, climate and human rights issues.

Tourists Fart Too

By Viv Forbes

The COP-Out politicians ruining Australia and its industries have promised impossible net-zero emissions targets (by some date well after they have left office). So why spend millions of tax-payer dollars on advertising for more tourists or vying for more games and circuses. Rich tourists are heavy-emitters.

While COVID barriers hamper Australians wanting to tour our own country, foreigners are offered red-carpet "quarantine-free" travel. At the same time politicians continue to make it difficult for foreign backpacker/workers.

These foreign sightseers will also guzzle up our largely imported fuel stocks. Australia is not extracting, refining or storing enough hydro-carbon fuels to survive even a small hiccup to our fuel import chain.

Moreover, our cattle and sheep are censured because of their emissions, but these idolised tourists will burn mega-tonnes of hydro-carbon fuels powering planes, taxis, cars, buses, trains, lifts, air conditioners and electrical appliances.

And, like our cattle and sheep, every tourist exhales, farts and burps.

'Frightening Story'

continued from page 5

Under FDA regulations, if a manufacturer is notified of a foreign case report that describes an event that is both serious and does not appear on the product's labeling, the manufacturer is required to submit the report to VAERS.

According to the VAERS data, of the 8,986 U.S. deaths reported as of Nov. 26, 20 percent occurred within 24 hours of vaccination, 26 percent occurred within 48 hours of vaccination and 61 percent occurred in people who experienced an onset of symptoms within 48 hours of being vaccinated.

VAERS data from all age groups combined, show:

• 19 percent of deaths were related to cardiac disorders.

• 54 percent of those who died were male, 42 percent were female and the remaining death reports did not include gender of the deceased.

• The average age of death was 72.7.

• As of Nov. 26, 4,480 pregnant women reported adverse events related to Covid vaccines, including 1,411 reports of miscarriage or premature birth.

• Of the 3,219 cases of Bell's Palsy reported, 51 percent were attributed to Pfizer vaccinations, 41 percent to Moderna and 8 percent to J&.

• 764 reports of Guillain-Barré syndrome (GBS), with 42 percent of cases attributed to Pfizer, 29 percent to Moderna and 27 percent to J&J.

• 2,163 reports of anaphylaxis where the reaction was life-threatening, required treatment or resulted in death.

• 11,334 reports of blood clotting disorders. Of those, 5,024 reports were attributed to Pfizer, 4,037 reports to Moderna and 2,222 reports to J&J.

• 3,257 cases of myocarditis and pericarditis with 2,025 cases attributed to Pfizer, 1,085 cases to Moderna and 137 cases to J&J's COVID vaccine.

As of Nov. 24, in the U.S., 454 million COVID vaccine doses had been administered. This includes 264 million doses of Pfizer, 173 million doses of Moderna and 16 million doses of Johnson & Johnson.

Steve's Say *cont. from page 2*

ultimately from the top cabal leaders we don't even know behind the curtain. Yet Trump continues to issue press releases at least daily keeping the country informed of what's really happening and where they're trying to take us. So who's really in charge here?

Many disclosures through multiple truth media sources indicate that Trump remains the formally recognized Commander-in-Chief of the US Military. A conquerer installed government has no authority over the military of the conquered nation since it usurped the true governmental authority when it installed its puppets, in this case through election fraud and a compromised judicial system.

America has been at war for a long time. For the moment the conquerers "rule," yet the people remain unsubdued. Referred to by many as an information war, true enough, but its way more than that. It is a spiritual war, a war on God Himself.

And there are plenty of casualties. For the bioweapon created by Fauci and his CCP allies, a key component of the enemy's successful capture of America's political process, killed millions around the world, mostly through fear, despair, faulty medical treatment, and the demonization and outright elimination of cheap drug treatment remedies. The ugly fruits of these actions continue to pile up. And those responsible will not be able to hide from their complicity in these heinous crimes, from Gates and Fauci to the medical professionals carrying out their orders. What a sad and sordid testimony to mankind.

Returning to God, with all our hearts, will restore this nation. He founded it, He blessed it, and He will not abandon it as long as the people truly believe in Him and the One He sent.

The birth of the Savior. That's what Christmas is all about. Let's trust in Him.

May God's blessing flow extravagantly upon your family this Christmas season!

The Courage To Reform

By Gary L. Wickert

In the early 16th Century, amidst a world lit only by fire, the Holy Roman Catholic Church was all-powerful in Western Europe, built over centuries with no legal alternative. It guarded its lofty political position by burning at the stake anybody who dared to go against it. The Spanish Inquisition had just been established as a court for the detection of "heretics" and to help secure the political and economic motives of the Church. Rome tolerated no deviation from its teaching and relied heavily on the ignorance and superstition of an illiterate populace. Local populations viewed the local priest as their "passport" to heaven and the Church's relationship with the people was based on money, which explained its massive wealth. Pope Leo X's power spread throughout Europe, and whether you lived in Germany, England, France, or Italy, you depended on the Catholic Church.

Corruption and Christian heresy were widespread throughout the Catholic Church in the early 1500's. Favors were done for those with money. Pieces of paper called "indulgences" were sold, through which you could purportedly buy heavenly forgiveness for your sins. Theology was all but ignored and mysticism had become widespread. The greatest gift ever given to mankind – the forgiveness of sins through Christ's death on the Cross – was no longer free and had been relegated to a footnote in history. Sinful man had corrupted the Good News and turned it into a selfish tool for political power and wealth.

The stars were aligned for change, however. The Renaissance – a period in European history of secular intellectual enlightenment encouraging people to begin to think for themselves – was in full swing. Brave men of spirit and inquiry were discovering the New World. A middle class was slowly rising from the ashes of the Dark Ages. The printing press had just been invented, allowing the republishing of the Greek New Testament and the widespread dissemination of the Bible. The stage was set for the greatest religious revival since the Council of Nicaea and the creation of the Nicene Creed in 325 A.D. On October 31, 1517, five hundred years ago this Halloween (known as "All Saints' Eve" back then), a young German monk named Martin Luther publicly objected to the selling of indulgences and posted his infamous 95 Theses – propositions for public debate over corruption within the Church – on the church door in Germany's Wittenberg Castle. The Reformation had begun. At a public debate in Leipzig in 1519, Luther was threatened with excommunication after declaring that "a simple layman armed with the Scriptures" was superior to both pope and councils without them. In 1521, he was placed on trial by the Holy Roman Emperor and commanded to recant. In refusing to do so, his famous reply serves as a battle cry for Christian doctrinal purity: "Hier ich stehe. Ich kann nicht anders." Translated: "Here I stand. I can do no other."

Martin Luther was not alone in the Reformation. John Calvin, Ulrich Zwingli, John Knox, Philipp Melanchthon, and dozens of others also joined the fight. These Reformers did not see themselves as inventors, discoverers, or creators. Instead, they saw their efforts as rediscovery. They weren't creating something from scratch, but were reviving what had become dead. They looked back to the Bible and to the apostolic era, for the mold by which they could reform the Church. Their rallying cry became five slogans in Latin: sola Scriptura ("Scripture alone"), solus Christus ("Christ alone"), sola gratia ("grace alone"), sola fide ("faith alone"), and soli Deo gloria ("the glory of God alone"). The basis of the Lutheran doctrine became the "unaltered" Augsburg Confession, the Smalcald Article, and Luther's catechisms.

Martin Luther's stand became the beginning of the Lutheran Church. John Calvin's efforts became the seed for the Baptist, Presbyterian, and Reformed Churches. The history of Cedarburg and much of Ozaukee County is inextricably tied to Lutheranism. In the early 19th Century, to avoid poverty and religious persecution, German Lutherans emigrated to Buffalo, New York, and on through the Erie Canal to Cedarburg, Kirchhayn, and Freistadt. These "Old Lutherans" came here between 1839 and 1845, establishing the City of Cedarburg and Trinity Lutheran Church. For the first ten years Trinity was simply known as "Die Kirche" (The Church). Immanuel Church was founded in 1852, and a split in 1862 led to First Immanuel Church.

The Protestant Reformation recently celebrated its 500th birthday. Half a millennium after Luther's 95 Theses, both Roman Catholics and Protestants universally affirm that Martin Luther and his fellow reformers were right. Together, they changed the Christian Church on Earth and altered the course of Western history forever. The Reformation is, next to the introduction of Christianity itself, the greatest event in human history. Celebrate it by attending church this Sunday. It is a right and a privilege we often take for granted; and there is much we take for granted.

John Locke: The Reasonableness of Christianity

"And thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind, and with all thy strength: this is the first commandment." Mark 12:30

By Riley J. Hood—Milwaukee County Constitution Party

John Locke was born on August 28th, 1632 at Wrington England, into a Puritan family. He died in October 28th, 1704 at High Laver, Essex. In the English Civil War, John's father, was a Calvary officer serving with the Parliamentarians. At 14, John went to study at Westminster School in London. His Headmaster was Richard Busby, a royalist who relied on birching. John studied Latin, Greek, Hebrew, Arabic, Math and Geography. In 1650, he was selected as a Kings Scholar, but the Westminster experience was the basis of his 1693 work, "Some thoughts on Education."

In 1652, John entered Christ Church, at the University of Oxford. Oliver Cromwell was Chancellor, and John Owen was Vice-Chancellor and Dean. He earned his Bachelor degree in 1656 and a Master Degree two years later. At Oxford, he made contact with men like Bishop John Wilkins, Christopher Wren, Robert Boyle and Robert Hooke. John studied Iatrochemistry, applying chemistry to medicine, particularly research on human blood.

The Restoration in 1660 led to people lacking in self-government acting like the buffoons they were in absence of Puritan restrictions. In Locke's Two Tracts on Civil Government, written in 1660, (unpublished until 1967,) he takes a position against what he calls enthusiasm. He supported Parliaments legislating Church administration, but not Doctrine, something that he disavowed by 1689.

In 1666 Locke was introduced to Lord Shaftesbury and the Whigs. Shaftsbury stood against the Stewarts, for Protestant Succession, Constitutional Monarchy, Christian toleration and industrialization. In 1668 Locke became a fellow at the Royal Society. He wrote the Fundamental Constitutions for the Carolinas in 1669 at the behest Sir William Berkeley and the Lord Proprietors. That Constitution states, "No man shall be permitted to be a freeman of Carolina, or to have any state of habitation within it, that doth not acknowledge a God, and that God is to be publicly and solemnly worshipped."

By 1672, Shaftsbury, and by extension Locke were out of favor with Charles II. In 1675, Locke went to France. By 1678, Shaftsbury was released from the Tower of London, and Locke returned to England in 1679. At this time, debate over James II succession was in full swing. This was also the time of the Popish Plot. Though lacking in proof, it was taken for fact, and many innocent people were executed. The plot is believed to have been fabricated by an Anglican Priest, Titus Oates.

Shaftsbury was again dismissed in 1681, tried for treason, acquitted, but fled to Holland where he died in 1683. Locke went to Holland in 1683. In this time, he wrote essays on Human Understanding and his Two Treatises on Civil Government. The Two Treatises were his justification for the Glorious Revolution. When Locke appeals to reason, he considers reason as a gift from God. He also referred to natural law and revealed law.

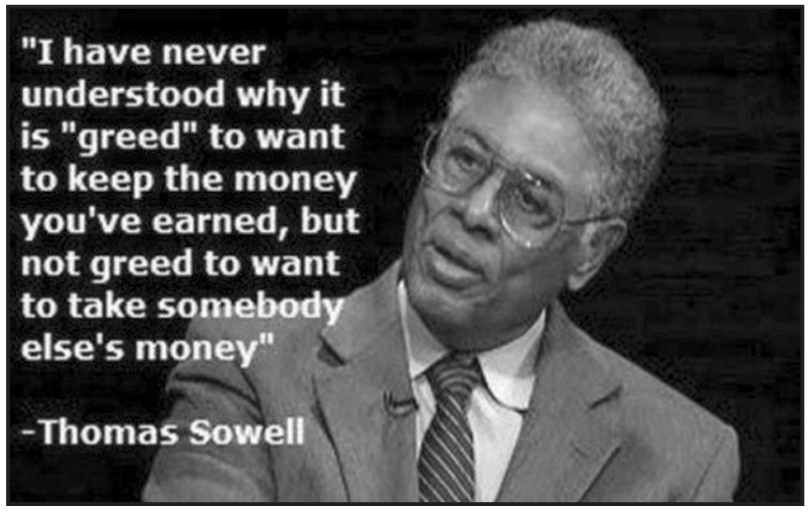
The First Treatise was a refutation of the Royalist Robert Filmer's Patriarcha, where Filmer asserts that Adam was the first King, and the right of any King is descended from him. (Adam was the first man, and that would make everyman a King.) But Locke asserted that Adam being crowned King is not found in the Bible. In the First Treatise Locke also wrote, "For men, being the workmanship of one Omnipotent and infinitely wise Maker: all the Servants of one Sovereign Master, sent into the world by His order, and about His business, they are His property whose Workmanship they are, made to last during His and not another's Pleasure." Locke asserted that Covenantal blessing from Adam through Noah were correctly conferred on all men in common. The basis for God-given Rights.

In the Second Treatise Locke wrote, "Human Laws are measure in respect to Men, whose actions they direct, albeit such measures as they are as they have also their higher Rules to be measured by, which rules are two, the Laws of God and the Laws of Nature, so that Human laws must be made according to the general Laws of Nature, and without any contradiction to any positive Law of Scripture, otherwise they are ill made."

In the same year he wrote a Letter on toleration and an Essay Concerning Human Understanding. In the latter he attacked scholasticism, which he thought by his time was standing in the way of new knowledge, promoted a certain form of tabula rasa, as opposed to innate understanding. Upon the ascension of William and Mary, Locke returned to England and helped write the English Bill of Rights.

Upon seeing his work being cited by Christ-haters, Locke wrote the Reasonableness of Christianity. Locke asserted that with Christ as mediator, every person has the ability, guided by the Bible to have a relationship with God, and live a life acceptable to the Almighty. This began with the individual accepting Jesus Christ as the Messiah. Locke wrote, "Such a law of morality Jesus Christ has given in the New Testament, we have from Him a full and sufficient rule for our direction, and conformable to that of reason." "He was sent by God, His miracles show it, and the authority of God in his precepts cannot be questioned." Locke affirmed, "To one who is persuaded that Jesus Christ was sent by God, to be a King and Savior to those who believe in Him, all his commands become principles, there need to be no other proof for the truth of what he says, other but that He said it, and then there needs no more but to read the inspired books to be instructed." Locke wrote A Second vindication of the Reasonableness of Christianity. He also wrote paraphrases of several New Testament letters. He died in 1704, and is buried at High Laver Church.

This Christian was an intellectual powerhouse, who influenced Sir William Blackstone, George Washington and our founding fathers. Even Jefferson, though he corrupted some of his principles was influenced by Locke. Speaking of corrupters, this is how Brittanicca.com twists his legacy, "English philosopher whose works lie at the foundation of modern philosophical empiricism and political liberalism. He was an inspirer of both the European Enlightenment and the Constitution of the United States." One would think Locke would have rejected the Enlightenment, and the French Revolution, modern liberalism and de-Christianization in all its forms, especially atheism. The socialist must re-interpret Locke so they can re-interpret our US Constitution. The Milwaukee County Constitution Party affirms the basic thrust of Locke's writings, "tabula rasa excepted" and we affirm our Platform Preamble, which is never up for debate, "The Constitution Party of Wisconsin gratefully acknowledges the blessing of the Lord God as Creator, Preserver, and Ruler of the Universe and of this Nation. It recognizes Jesus Christ as transcendent King over all nations and hereby appeals to Him for aid, comfort, guidance and the protection of His Divine Providence as we work to restore and preserve this nation as a government of the people, by the people, and for the people."



Howling for Blood

"As for my people, children are their oppressors, and women rule over them. O my people, they which lead thee cause thee to err, and destroy the way of thy paths." Isaiah 3:12

By Riley J. Hood—Milwaukee County Constitution Party

I was in my basement lifting weights on Friday November 19th, 2021 when I heard that Kyle Rittenhouse was acquitted on all five counts of murder and other charges. It was a pleasant surprise, as I expected him to be found guilty, and even to have the federal government seek the death penalty against him and give him the needle at Terre Haute Indiana. Thankfully none of that happened, yet, but Rittenhouse is still guilty of being white in the eyes of the black community, the communists, the criminals and their liberal allies.

Rittenhouse was chased by a mob of rioters who wanted to beat someone up, even though he was armed. Two of them will never riot again. All of Kyle's assailants were white, and the only thing black about the whole affair was that the riots were being orchestrated in the name of the black criminal Jacob Blake Jr.

After the verdict Mr. Jacob Blake Sr, a failed father ranted that the system was broken, and used a bunch of words that black people can use but not white people, and his speech had to be "dumped" by the broadcasters, who tried to make excuses for his spoiled behavior. Rittenhouse didn't shoot his criminal son. Jr. was shot by the police while resisting arrest.

CBS 58 is whining that the jury was "overwhelmingly white" and "only one was a person of color" never mind it was mostly women, (7 women and 5 men) and the verdict was unanimous. It is supposed to be a jury of your peers, not a jury of your enemies. I've got bad news for CBS 58, Kenosha is overwhelmingly white, but the good news is that no one is forcing them to go there. They can live in the inner core on 27th and North if love black people so much, but I suspect all these lefties commute in from Oconomowoc.

The father of one of Kyle's assailants said, "If he were black, he would have been convicted." OJ Simpson had DNA evidence against him, and a jury of his black peers, acquitted him, and several of them admitted he was guilty, but did it to make a socialist statement. As a matter of fact, OJ was "that Oreo" until he murdered his white ex-wife and her boyfriend, and then he became a hero to a criminal centered community.

The Rittenhouse acquittal sparked riots in Chicago, Portland, and Howard University. (HU was founded by a white man, Major General Oliver Otis Howard in 1867. Maybe they should tear his statue down and rewrite history and say they were founded by Malcom X.) Jesse Jackson used the verdict as a pretext to ship his Rainbow Coalition into Kenosha to march.

In Waukesha, a hate filled black criminal ran down a parade full of "mostly white people" but no one mentioned that the perp, Darrell Brooks, was black, even though that is what the facts are. Because it doesn't comport with the liberal narrative, it has been swept under the rug. Why was it swept under the rug? because it was an intolerable change of subject keeping people from howling for Rittenhouse's head.

If you were being chased by a mob of mindless rioters, what would you do? surrender to the tender mercies of those people, like the sodomite Tim Carpenter did? Groups like BLM, Antifa, and their liberal allies have soaked America with the gasoline of affirmative action and the accelerant of phony racial accusations for more than a half of a century, and any spark will light the fire. America will continue to, in the words of a black activist, to, "Burn Baby Burn." If you want this put to end, you have to tell these people they are wrong, and speaking the truth in love, tell them to start loving their neighbors as themselves, including Kyle Rittenhouse.

Jussie Smollett Practiced The Whole Thing Before Staging His 'Attack'

By Zack

Yesterday I reflected on what we can expect in the Jussie Smollett case and why it's so important that American's pay attention to the outcome of the trial.

Today the prosecution has emerged with new evidence against the actor who staged an attack and supposed lynching against himself by two alleged white supremacists.

The white supremacists who are black… I know I keep saying that and it's important to remember.

The prosecution claims that Smollett did a practice or 'dry run' of the attack after paying the two brothers $3,500 to attack him.

Shouldn't the Vice President make a public statement condemning Smollett?

Sure there is an active case going on as it relates to the matter but that didn't hold Biden back from calling Kyle Rittenhouse a racist white supremacist.

Anyone with half a brain cell wants to see Smollett behind bars.

While that is likely not going to happen because well he is a liberal darling of Hollywood and the democrats, this new evidence against the accused actor is a major win for the public.

Apparently, Smollett and the brothers he paid to attack him met a day in advance to practice the attack.

Reportedly, Smollett gave directions and advice on how to act out the 'scene'.

One thing we can learn from all of this is that Smollett is a worse director than he is an actor which is saying something.

All jokes aside, it looks like the evidence is mounting against Smollett who faces up to three years in prison.

Unfortunately, a number of experts have eluded to the fact that Smollett will likely face a fine and some community service instead of jail time.

Ultimately, that's the problem.

The left never faces any repercussions for their actions which is why they can stage pandemics and limit individual freedoms.

I will continue to report on the case so stay tuned!

Modern day 'Mengele': Teetering on his pedestal, Fauci demands punishment for his critics

By WorldTribune.com, 12/03/2021

Dr. Anthony Fauci is still one of the most influential men in the world and reigns in Washington, DC as the highest paid U.S. bureaucrat.

But that official stature is not holding up under scrutiny even as Fauci claimed this week he should be immune to criticism because he "represents science".

Fox News host Lara Logan compared Fauci, the nation's leading infectious disease expert, to the infamous Nazi doctor Josef Mengele, who worked at Auschwitz during the Holocaust.

"This is what people say to me, that he doesn't represent science to them. He represents Josef Mengele ... the Nazi doctor who did experiments on Jews during the Second World War and in the concentration camps," Logan said Monday during an appearance on "Fox News Primetime."

"And I am talking about people all across the world are saying this. Because the response from COVID, what it has done to countries everywhere, what it has done to civil liberties, the suicide rates, the poverty, it has obliterated economies."

"The level of suffering that has been created because of this disease," Logan added, "is now being seen in the cold light of day, i.e. the truth, and people see there is no justification for what is being done."

Dr. Fauci not only thinks such criticism unwarranted and an attack on "science," but he wants his critics severely punished.

Fauci 'Astounded' Fox News Hasn't Punished Lara Logan, read the headline in The Daily Beast.

"What I find striking is how she gets no discipline whatsoever from the Fox network," Fauci told MSNBC. "How they can let her say that with no comment and no disciplinary action. I'm astounded by that."

It is certainly the case that U.S. bureaucrats can't be held be ejected by voters and are rarely held to account. But average Americans and a growing number of critics are not only fed up but furious.

Former CBS and NY Post investigative reporter Al Guart posted on FB:

Fauci needs to be questioned by grand juries over his involvement with Coronovirus experiments that enable them to enter human lungs, which is called "gain of function" research. Such research must end now and anyone involved prosecuted. These people are playing with genocide. No one who helped create COVID 19 has been held accountable. Yet how many victims suffered and died? Totally man made and avoidable. Accountability, not hysteria. I want that.

Fauci has been a source of "misinformation" which has "cost lives," Sen. Rand Paul told Fox News host Maria Bartiromo.

The Kentucky Republican added that Fauci "should go to prison for 5 years for lying to Congress. They've prosecuted other people. They've selectively gone after Republicans, but in no way will they do anything about him lying. But he should be prosecuted for lying and at the very least should be taken out of his position."

Sen. Ron Johnson: Americans died as Fauci 'sabotaged' early Covid treatments

By WorldTribune.com, 12/06/2021

It is a "travesty" that early treatment for Covid has been, for the most part, ignored in favor of pushing the vaccines, Wisconsin Republican Sen. Ron Johnson said.

"I ask a simple question, did Dr. Fauci's response to COVID-19 work? 788,000 lives lost, many because he ignored and sabotaged early treatment using cheap, available, generic drugs in favor of a vaccine that is not as safe or effective as we all hoped it would be," Johnson tweeted.

Far from "following the science," Fauci and the medical establishment have essentially blocked the use of ivermectin and hydroxychloroquine to treat Covid even though hundreds of scientific studies have found they are highly effective in combating the virus.

In an interview last week on Fox News's "The Brian Kilmeade Show", Johnson noted:

"This virus has evolved, they've become more contagious because they want to evolve, they want to replicate. But they've also become less lethal because killing your host doesn't help you replicate very well. So again, that's the general tendency of viruses, so why would we expect anything different from the coronavirus? Except for, you wanna create a state of fear, to keep us in this state of fear, to maintain the controls. And that's what you're seeing here in the United States."

Johnson added: "I mean – by the way, Fauci did the exact same thing with AIDS. He overhyped it. He created all kinds of fear, saying it could infect the entire population when it couldn't, and he's using the exact same playbook with Covid: ignoring therapy, pushing a vaccine. The solution to this, I've always felt, is early treatment. We still haven't robustly explored that, and that's a travesty."

Fauci and his Big Media comrades blew a gasket when Johnson said that Fauci had "overhyped" AIDS.

"How do you respond to something as preposterous as that?" Fauci said after CNN played a deceptively edited clip of Johnson's comments. "Overhyping AIDS? It's killed over 750,000 Americans and 36 million people worldwide. How do you overhype that? Overhyping COVID? It's already killed 780,000 Americans and over 5 million people worldwide."

"I don't have any clue what he's talking about," Fauci said.

"I don't think [Sen. Ron Johnson] does either," CNN personality Jake Tapper added.

So, did Fauci "overhype" AIDS?

In the following video clip, Fauci, who has been director of the National Institute of Allergy and Infectious Diseases (NIAID) since 1984, claimed that AIDS could be transmitted through "ordinary household contact." AIDS can not be spread in such a way.

Meanwhile, as the Fauci regime and Big Media continue to rail against the use of ivermectin, the lawyer who helped a dying Covid patient in Illinois win court-ordered treatment with ivermectin, which saved the man's life, says the episode reveals a deep

GOVERNMENT CIRCUS

Transparent? Key Wisconsin mayors lawyer-up in response to Zuckerbucks probe

By WorldTribune Staff, December 2, 2021

The mayors of Madison and Green Bay, along with the state election commission and its administrator, continue to stonewall on an investigation into the use of millions of dollars from Mark Zuckerberg which went to Wisconsin's largest and most-Democrat cities during the 2020 election, the lead investigator told the State Assembly's Committee on Elections on Dec. 1.

The mayors and election commission have refused to answer questions about the Mark Zuckerberg-funded Center for Tech and Civic Life (CTCL), which funneled the Zuckerbucks into a get-out-the-vote scheme, Michael Gableman, a former state supreme court justice, told the committee.

"[Green Bay Mayor] Eric Genrich and [Madison Mayor] Satya Rhodes-Conway have chosen to ignore the subpoenas issued by the Wisconsin Assembly because they have no intention of answering uncomfortable questions about what they did with the millions of dollars in Zuckerberg money that they took," Gableman said.

Green Bay and Madison, along with Milwaukee, Racine, and Kenosha accepted nearly $9 million from the CTCL in 2020, allegedly for coronavirus safety operations.

"Reasonable minds might wonder whether the millions of dollars each of these mayors received from the Zuckerbergs may have induced them to do something other than treat all candidates fairly and impartially. And whether those mayors used the Zuckerberg money to get out the vote for Joe Biden," Gableman said.

Gableman said a lawsuit from the Wisconsin Elections Commission and the move by Green Bay's mayor to "lawyer-up" tells him that the people involved with the CTCL money in Wisconsin, and involved in last year's elections, don't want those questions answered.

"They are trying to run and hide from accountability to the citizens they are supposed to serve," Gableman told lawmakers. "Why go through all of this legal evasion, maneuvering, and expense unless they do not want the public to know what they have done?"

Gableman is facing a lawsuit from Wisconsin Attorney General Josh Kaul that seeks to stop his investigation. Specifically, it seeks to stop him from asking questions of Elections Commission administrator Meagan Wolfe. That case is due before a judge on Dec. 23.

Gableman on Wednesday unveiled for the first time on Wednesday that he filed writs of attachment in Waukesha County Court against Genrich and Rhodes-Conway. A writ of attachment would allow the court to seize the documents and other pieces of evidence that Gableman is asking for in his investigation.

The Federalist Senior Editor Mollie Hemingway detailed the Zuckerbucks controversy in her book "Rigged: How the Media, Big Tech, and the Democrats Seized Our Elections".

Zuckerberg gifted $350 millions to two left-wing groups, the CTCL being one of them. The groups then gave the money to government election offices.

The Zuckerbucks, however, were not an unconditional donation, Hemingway pointed out. There were strings attached, which amounted to Democrat get-out-the-vote efforts, mass mail-in voting, and ballot "curing," whereby election workers "fix" mail-in ballot problems after the ballot has been submitted.

Dear John Chisolm, it's time for you to go

By Bob Donovan

Dear John,

You and I have been friends for years. I enjoyed working with you as 8th District Alderman and over the years, although we shared different opinions at times, we worked well together. But I have to tell you John, things have changed. I have to agree with the voters of Milwaukee, and they're telling me you've got to go. I think it's time to say goodbye John.

Our relationship was always built on honesty. That's why I thought we could do good things for the City of Milwaukee; always from a level of honesty and putting the citizen first. But you've changed John. I can't trust you anymore. Here's why. You aren't being honest. When things go wrong, you blame someone else, even try to coverup. Your investigation into the Waukesha Christmas Parade tragedy? That's just blowing smoke. The fact is you and your office are releasing dangerous criminals back into society as a matter of policy and not incidental to this law or that judge. You keep grasping at straws to diffuse the blame. Case backlog? Covid? The truth is your department is inefficient with only a pitiful 40% prosecution rate on cases charged. Admit it John. You really screwed up this time and you and your department can't fly under the radar anymore. Innocent kids and moms have been killed and the entire city, state and nation are up-in-arms.

Your low-bail policies not only broke confidence with friends like me, but broke confidence with every voter who elected you County D.A. in the first place. They trusted you to protect them and their families. I trusted you too. Not any more John. I have to side with the voters on this. It's time for you to leave. You took an oath of office just like I did to protect and defend the citizens you serve. You broke that oath, so it's time to pack up and go John. You will always be my friend, but I can't work with you anymore. I plan on winning the upcoming mayoral election; if elected I will have to ask you to resign. So, do it now John and everyone in Milwaukee County and Wisconsin will be better served.

Fauci 'sabotaged' early Covid treatments

cont. from page 9

need for American health professionals to rethink their approach to the virus.

Kristin Erickson represented 71-year-old Sun Ng of Naperville, who was on a ventilator for weeks and dying with Covid-19 when Erickson won a court order on Nov. 8 to force the hospital to treat him with ivermectin.

Within days, Ng recovered. He is now back home walking and enjoying life, Erickson said.

"After one day, he was able to do a breathing test he couldn't do for 22 days," Erickson said in an interview on the John Solomon Reports podcast. "After three days, he was off the vent for two hours. And then by the fifth day, he was off it entirely. So the hospital tried to file for, you know, a physician report, after he was off the vent, saying that ivermectin is not the reason he's better. But clearly it is."

Erickson said she found 66 studies globally that show ivermectin is effective in fighting and warding off the virus, and it is used in places like India and Bangladesh but not in the United States.

"We need to think outside of the current standard of care that hospitals are giving. And if it's not working, let's look at outcomes and not finances," Erickson said.

Erickson said the phones at her office and the New York group that assisted Ng have been ringing off the hook and the courts are likely to be inundated for similar interventions for other patients after what happened in the Ng case.

"I don't know what people's motivations are," she said. "Certainly ours here is to help people get what they need. I know there's a lot of good-hearted people out there who want to save people, even in the hospital setting. Physicians and nurses, they want to do the right thing. But if hospitals aren't allowing it, that creates a barrier for people who are hospitalized."

Georgia Gov. Kemp confirms list of 36 problems with 2020 election

By WorldTribune.com, 12/03/2021

Georgia Republican Gov. Brian Kemp issued a letter last month which validated a concerned voter's list of problems with the 2020 general election.

In fact, all 36 specific problems which were raised by Georgia voter Joseph Rossi were confirmed by Kemp, who referred the findings to the Georgia State Election Board for investigation, Kevin Moncla noted in a Dec. 1 report for UncoverDC.

Kemp's acknowledgment of the list of election irregularities renders the Fulton County hand-count "audit," and therefore the entire state vote count, unreliable, analysts say.

Georgia Secretary of State Brad Raffensperger had earlier dismissed Rossi's findings.

"In the end, Mr. Rossi's findings, which the Georgia Secretary of State's office ignored, attempted to diminish and then summarily dismissed, were investigated and confirmed by the office of the Governor," Moncla wrote.

"This bears repeating. The same exact list of 36 allegations excused and rejected by the Secretary of State, were investigated and confirmed by the Georgia Governor's office."

Kemp's confirmation of Rossi's findings "further discredits the Secretary of State's office and renders the results of the hand count unreliable. Because the hand-count results have been used as the reason to dismiss all other challenges, those problems are now more relevant and important to resolve than ever before. Such as those raised by VoterGA, which include thousands of duplicate ballot images and the tens of thousands of missing ballot images," Moncla noted.

VoterGA is an election integrity organization led by Garland Favorito. Some of the now-validated Rossi findings were separately and independently discovered by VoterGA.

Rossi, a recently retired executive who worked for Frito Lay and Pepsi, began investigating the Georgia election results in January and quickly turned his focus to the hand-count "audit." More specifically, Rossi focused on batch tally sheets, which are a form that details the votes counted for each candidate in the corresponding batch (usually 100) of ballots.

Georgia Gov. Brian Kemp

"In other words," Moncla noted, "those performing the count would take 100 ballots and count the number of votes for Trump and the number of votes for Biden, etc. and mark the count for each on the tally sheet. These tally sheets would then be totaled to produce the results."

With the help of an interested friend and local attorney, Rossi counted the tally sheets for Fulton County. They found thousands to be missing, representing approximately 275,000 votes (half of the total).

"If the most populated county in Georgia yields results from a hand-count that are wildly incorrect, then obviously, the results of the state will also be incorrect," Moncla noted. "By the Secretary of State's own admission, Fulton County has a long history of election problems, which leaves no excuse for them to blindly accept Fulton's hand-count results without even as much as the most basic check."

The state election board has announced it will follow Kemp's recommendation and perform an investigation.

Unchecked Power

cont. from page 1

the Civil War settled the supremacy of the Federal government over states on the issues of civil rights, the right to vote and the application of the Bill of Rights to the actions of states, the federal government has dramatically expanded its powers over states and persons using other vague provisions of the Constitution never intended for the federal amassing of power.

What is so frightening about the accumulation of federal power is our Founders believed the Constitution granted only limited powers to the federal government. Unfortunately, from the beginning of the Republic, all three branches of the federal government, realized "The Constitution of 1788 contained very few specific restrictions on the ways in which the power of the national government could be exercised against its people." As the power of the federal government expanded, the power of the states and citizens was reduced.

So, while the U.S. Supreme Court may hold a state does not lose its distinct and individual existence, or its right of self-government by being part of the Union, such belief is pure illusion. Other than the rights protected by the Bill of Rights and the three Civil War Amendments, the only other protections citizens have against the federal authority are those given us by legislation, and those protections can easily be repealed by Congress, ignored by the Executive or struck down by the courts.

A few examples tell the story of the incredibly shrinking power of state sovereignty and their ability to protect the freedom of citizens.

Direct Election of Senators: Perhaps the most significant change in the federal/state relationship, other than the Civil War Amendments to the Constitution, is the direct election of Senators, adopted in 1913 by the XVII Amendment to the Constitution. Prior to 1913 state legislatures elected Senators. While the direct election of Senators is a democratic change, it dramatically changed the power structure of the nation. A Senator elected by a state legislature is accountable to the state. Senators elected by the people are independent, representing themselves, their political party, and large financial contributors. For Senators elected by the people, service to their state is merely a pleasant, fleeting campaign thought on the road to the "presidency".

The Irrelevant Tenth Amendment: Our Founding Fathers believed the national government was one of limited powers, having only those specifically granted it by the Constitution. Therefore, powers other than those enumerated in the Constitution, rest with States or the people. To enshrine this belief, the X Amendment to the Constitution reads "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

While the federal government remained small in size and authority, the power of states was not frequently questioned. When the federal government sought, during the Great Depression, to greatly expand its powers to implement the New Deal, the limits of federal power became a Constitutional issue. The question of the extent of federal power first arose when the Department of Labor sought to regulate wages. States argued wage regulation was not enumerated in the Constitution, therefore, it was not a federal function since under the X Amendment, such power rested with the states. Unfortunately for the states, a unanimous Supreme Court, in United States v Darby, (1941) stripped all meaning from the X Amendment. The court held the X Amendment was merely a "truism" since the substance needs be determined by what powers are delegated to the federal government from any part of the Constitution. In Darby, the court held the federal government has the constitutional power to regulate wages under the Commerce Clause. This holding ignited the massive expansion of federal power.

The Ever-Expanding Commerce Clause: Using the powers granted under the Commerce Clause of the Constitution, "to regulate Commerce with foreign nations, among the several states, and with the Indian tribes," the Supreme Court sanctioned the massive growth of what has become the Administrative State. The federal government can now reach almost every activity in the nation, i.e., labor, environment, securities, even children's' toys and the treatment of animals. The federal government issued 190,000 new regulations (which are laws) between 1976 - 2017, and passed so many new federal laws, no one knows how many.

The Supreme Court did not strike down a single federal law expanding federal power between 1937 to 1995. In 1995 it finally struck down a congressional enactment involving the possession of a gun in a school yard. The question was whether one gun so sufficiently impacted commerce that the federal government could regulate it. The court found, that the possession of a gun, did not substantially impact interstate commerce. The Supreme Court struck down another case involving violence against women, as being intrastate, not interstate, commerce in nature. After minimally limiting federal power, the Supreme Court returned to rubber stamping all future congressional enactments.

Any gaps in the feds power over the states were easily filled by bribing states

Whatever state activities the federal government cannot regulate through the Commerce Clause, Congress can reach by using its tax and spend powers under the Constitution. By placing conditions on the grants, it makes to states, the federal government can entice states to do whatever federal business it wants done in order to receive federal money.

Prior to the pandemic, the federal government made $533 billion in grants to states in 2018, about 30 % of state budgets, to implement federal programs. With federal Pandemic funding flowing into state budgets, by hundreds of billions of dollars, States are now under more federal control than ever before.

Only a few superficial limits on federal power over states

It appears there are only two marginal limitations on the extent of federal power over states. First, the feds cannot regulate purely local activity however, even this limitation is questionable. The Supreme Court has even found the production of agricultural products grown for personal consumption during the depression and marijuana grown for personal medicinal use, have cumulative impacts on commerce, as such could be subject to federal regulation.

A second limitation on federal power, it cannot commandeer state personnel or resources for federal purposes. To get around this limitation, the federal government merely bribes states with tax dollars likely sent to DC by the states.

Since Darby eliminated any federal respect for states, all three branches of the federal government abandoned any belief that states are sovereigns and capable of self-government. By working together, the three branches of our government, have manipulated the Constitution to expand federal power at the expense of state power. The result is a federal government free of all checks on its power.

As state sovereignty is constantly being diminished by the feds, some states are fighting back. Part IV will discuss how the states are fighting back. This state resistance raises two questions – how long can a "Civil," Civil War continue? and what are the options for states crushed by federal power to regain some sovereignty?

William L. Kovacs has served as senior vice-president for the U.S. Chamber of Commerce, chief-counsel to a congressional committee, a partner in D.C. law firms, and his book Reform the Kakistocracy is the winner of the 2021 Independent Press Award for Political/Social Change.

Whistleblower video: Citizens file lawsuit against Pennsylvania Sec. of State, election officials

By WorldTribune Staff, December 13, 2021

Elections officials in Delaware County, Pennsylvania were caught ripping 2020 election tapes "into pieces" and "placing them into the trash stating they will have a campfire to burn the data," according to a lawsuit filed last month.

The lawsuit against former Secretary of State Kathy Boockvar, Delaware County, the Delaware County Board of Elections, and more than a dozen individual election officials, was filed after whistleblower video purported to show Delaware County election officials destroying records from the November 2020 general election.

The complaint was filed by Delaware County residents Ruth Moton, Leah Hoopes, and Gregory Stenstrom, as well as the Friends of Ruth Motion campaign.

The lawsuit states that the defendants sought "to prevent the discovery of the fraudulent results of the November 3, 2020 election" and in the process violated state and federal election laws.

Related: Whistleblower releases video of Pennsylvania county election officials destroying ballots, evidence, November 18, 2021

"When coupled with the videos," the lawsuit "may finally awaken the sleeping masses to the cause of election integrity," Margot Cleveland wrote for The Federalist.

The lawsuit points to three videos in which it contends election officials discuss destroying data.

According to people with knowledge of the lawsuit, the first video captures a conversation between James Allen, the Director of Election Operations for Delaware County, and Jim Savage, identified by Delaware County's directory as the Chief Custodian/Voting Machine Warehouse Supervisor.

Allen is heard telling Savage, "Then get rid of the pads and the second scanners."

"We can't talk about it anymore," Savage replies, with Allen questioning, "Why?" "It's a felony," Allen countered.

In the second video, the whistleblower films a conversation with Delaware County official James Ziegelhoffer. Ziegelhoffer, also known as Ziggy, held the position of "Judge of Election" for the Western Precinct in the Media Borough.

An unnamed source is heard saying in the video: "Why would you throw anything away? Because you have to save it for 22 months," a reference to federal retention mandates.

"Yes there are tapes that are being tossed," Ziggy acknowledges, but adds, "they are of no audit value."

A third video captures a man identified by individuals with knowledge of the lawsuit as a Delaware County lawyer, Tom Gallager. As Gallager tears the tapes from the voting machines and discards them, the whistleblower can be heard asking: "Tom, why do you have to rip it up? Makes you feel better?"

"At this point," Gallager replies, "I don't want anybody to pick it up, and thinking we threw stuff away."

"We're gonna have a little campfire going," Ziggy adds.

Cleveland noted that the videos are still not likely to "be enough for those so blinded by their distaste for Trump that they cannot see the real threat to our democracy: elections without integrity and an electorate unable to trust the official outcome."

'predators and perverts'

cont. from page 1

Media personalities who unconditionally toe the Left's line, and then allegedly get caught with their pants down, or worse, much worse, go to perv purgatory. Consider:

Chris Cuomo: Soon after he was canned, a prominent Washington, D.C. workplace attorney arranged to share materials supporting accusations by a former colleague of Cuomo at ABC News that he had sexually harassed her there.

"My client came forward at this time because she felt in sharing her story and related documentation, she could help protect other women," Debra Katz said in a statement. Katz said her client was motivated by outrage over what she said was the hypocrisy of Cuomo's assertion to viewers of his "profound" concern for the targets of sexual harassment.

Matt Dornic, head of communications for CNN, said that outside attorneys determined Cuomo had committed fireable offenses related to his brother's (former New York Gov. Andrew Cuomo) scandal, violating the terms of his contract. "When the new allegations came to us, we took them seriously, and saw no reason to delay taking immediate action," he said in a statement.

Jeffrey Toobin: After spending eight months in perv purgatory, Toobin returned as CNN's chief legal analyst in June. Toobin had exposed himself during a Zoom call with colleagues at The New Yorker. Toobin said in an interview on the predators and pervs network (CNN) that he is a "flawed human being who makes mistakes" and said his conduct was "deeply moronic and indefensible."

Don Lemon: A bartender filed a lawsuit against Lemon in August 2019 alleging that the CNN personality assaulted him at a Hamptons bar.

Dustin Hice, who said Lemon jammed his finger in his face after rubbing his own genitals, has said that CNN is "a predator protecting machine' that is "rife with perverts."

"This is who they are," Hice told Fox News. "They're a predator-protecting machine, they slander and smear victims with impunity. They've tried to grind me down, they've attempted to intimidate witnesses in my case, they've released confidential information about me in attempt to doxx me. They are complicit. This is who they are."

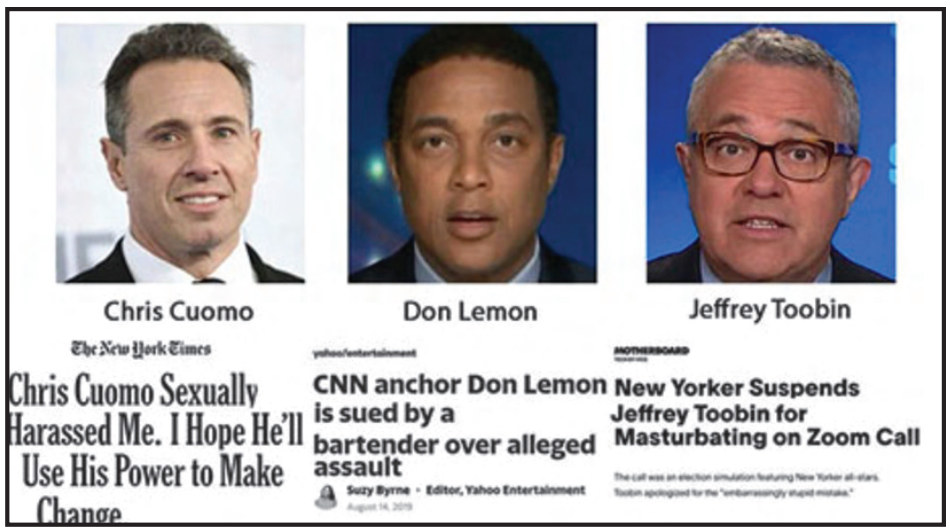
That sentiment was driven home on Friday when CNN staffer John Griffin was arrested on three counts that he used a facility of interstate commerce to abuse underage girls.

Griffin's employment with CNN, which began in 2013, included work as a producer for Chris Cuomo and for senior political analyst John Avlon.

According to a Department of Justice statement, Griffin "utilized the messaging applications Kik and Google Hangouts to communicate with people purporting to be parents of minor daughters, conveying to them, among other ideas, that a 'woman is a woman regardless of her age,' and that women should be sexually subservient and inferior to men."

The statement added:

"*On these communication platforms, Griffin sought to persuade parents to allow him to train their daughters to be sexually submissive. In June of 2020, Griffin advised a mother of 9- and 13-year-old daughters that the mother's responsibility was to see that her older daughter was 'trained properly.' Griffin later transferred over $3,000 to the mother for plane tickets so the mother and her 9-year-old daughter could fly from Nevada to Boston's Logan airport. The mother and child flew to Boston in July of 2020, where Griffin picked them up in his Tesla and drove them to his Ludlow house. At the house, the daughter was directed to engage in, and did engage in, unlawful sexual activity.*"



The indictment said Griffin "attempted to entice two other children over the internet to engage in sexual activity."

"We take the charges against Mr. Griffin incredibly seriously," a CNN spokesperson said on Friday. "We only learned of his arrest this afternoon and have suspended him pending investigation."

Report: 39 states given an 'F' on their response to child sex trafficking

By WorldTribune Staff, December 12, 2021

In a recent report, the nonprofit Shared Hope International graded the states on their response to child and youth sex trafficking. Receiving a failing grade were 39 states and Washington, D.C.

According to the report, Alaska is the lowest-ranked state. Other states receiving an "F" were: Alabama, Arkansas, Arizona, Connecticut, Delaware, Georgia, Hawaii, Idaho, Illinois, Indiana, Iowa, Kansas, Maine, Maryland, Massachusetts, Michigan, Missouri, Montana, Nebraska, Nevada, New Hampshire, New Jersey, New Mexico, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, Rhode Island, South Carolina, South Dakota, Vermont, Virginia, West Virginia, Wisconsin, and Wyoming.

Florida is the top-ranked state, according to the report, with an overall grade of C and a score of 72.5 out of a possible 110 points.

The 10 states with the highest scores are Florida, Texas, Mississippi, California, Washington, Colorado, Kentucky, Utah, Tennessee, and Louisiana. Besides Florida, the rest of the top 10 states were given a grade of D, with state no. 11, Minnesota, being the only other one with a D grade.

States are scored on six different policy issues and given "extra credit" for extending certain protective policies to youth aged 18 to 24 and child labor trafficking victims.

The six issues are:

1. Criminal provisions: "Clear criminal laws, including those that criminalize buyers of sex with children, are needed to ensure all sex trafficking offenders can be held accountable."

2. Identification of and response to victims: "States' laws must identify all commercially sexually exploited children as victims of trafficking and provide for a protective, rather than punitive, response."

3. Continuum of care: "To break the cycle of exploitation, state laws must provide victims access to funded, trauma-informed services."

4. Access to justice for trafficking survivors: "A range of civil and criminal justice remedies must be available for victims under the law."

5. Tools for a victim-centered criminal justice response: "Criminal justice procedures for the benefit and protection of victims must be provided under the law."

6. Prevention and training: "To help prevent trafficking and promote more just responses to child sex trafficking victims, training for child welfare, juvenile justice agencies, law enforcement, prosecutors, and school personnel as well as prevention education for students, must be required by law."

Why I Oppose the Big Bang Theory

"God, who at sundry times and in divers manners spake in time past unto the fathers by the prophets, Hath in these last days spoken unto us by his Son, whom he hath appointed heir of all things, by whom also he made the worlds;" Hebrews 1:1-2

By Riley J. Hood-Milwaukee County Constitution Party

I am a fan of Lee Strobel. I have several of his works, The Case for Christ, The Case for Faith, and the Case for a Creator. In the Case for the Creator Lee cites the big bang as an argument for creation. When describing the explosion, he said it sounded like the book of Genesis. I respectfully disagree. I think when philosophers point out to atheists that scientists now accept a beginning of the universe, as opposed to steady-state Darwinism, that does not mean Christians accept should the theory in total.

In the early 1960's, an idea of an expanding universe was put forward that conflicted with the then widely accepted "steady state," evolutionary theory, which assumed gradualism. The idea postulated that if one could discover microwaves in outer space, one could prove an explosive expansion from a compressed point of origin, or the big-bang. That is an imposed reasoning based on the evidence.

In 1962, AT&T launched the Telestar satellite, which provided service for global long-distance telephone calling. The first calls had a background of crackle and hiss, and AT&T set their engineers to remedy the problem. Two of whom were Robert Wilson and Arno Penzias, both Radio Astronomers. They were searching the sky, and to calibrate their equipment, the aimed their telescope at a "blank spot" in the sky. Expecting to pick up nothing, they picked up a microwave signal. They cleaned their telescope, trying to eliminate any cause of this signal, picked another empty spot, and picked another microwave signal, thus discovering a universality of micro-wave radio signals in outer-space.

A short time later, they read the big-bang theory that was coming out of Harvard, and informed them that such micro-waves have been discovered. By 1964, the Big-Bang Theory was declared to be proven, culminating in a Nobel Prize for Wilson and Penzias. I remain unconvinced of the Big-Bang idea, for the following reasons:

• The Bible, the Big-bang contradicts Genesis Chapter 1, and consequently the rest of God's Word. That may upset our current crop of scientists, so-called, but we still have a free country, in spite of them.

• I have never seen order emerge from disorder. I can put a sugar cube into a cup of coffee, and I see the sugar dissolve, I have never seen a sugar cube pop out of a cup of coffee as a statue, or living thing.

• I have never seen order produced by an explosion. I have never seen order sustained by an explosion. I can prove that by military experience. God's creation in the Book of Genesis is not a destructive process. God spoke things into being.

• I have never seen structure, and repetitive structure produced without a designer and producers. I can prove this by machine shop experience. The product starts as a design, then is produced, then is reproduced.

Regarding the big-bang theory of Neo-Darwinism, it is easy to call for one proof, and then when it is discovered say it proves your theory. Most theories need many proofs, before they are moved out of the category of hypothesis. The Big-bang called for a single proof, and when it was discovered, the idea was promoted as a "Theory of everything," in the 1970's. I reject this "TOE" as much as I reject "steady state" gradualism. I hold to my "Account of everything," which is the Bible, the Word of God. Not only do I believe in God as creator, but also as sustainer, "Who being the brightness of his glory and the express image of his person, and upholding all things by the word of his power, when he had by himself purged our sins, sat down at the right hand of the Majesty on high;" Hebrews 1:3

The Constitution Party of Wisconsin, a recognized political party, promotes the Biblical principles referred to in the Declaration of Independence and United States Constitution. We promote these principles by guiding our members into positions of civil authority.

CPOW is:

- 100% Pro-Life-We will re-secure the Right to Life.
- 100% Pro-Family-One Man, One Woman marriage.
- 100% Pro-Gun-We reject any form of gun control.
- 100% Pro-Constitution-We will cut the federal government down to Constitutional size.
- 100% Pro-America-We favor American Liberty, America's economy and American energy for the American People.

Individual membership is $30.00 per person per year and Friend of the Party status is $20.00 per year.

Covid-19: The Oligarch Variant

"The slothful man saith, there is a lion in the way; a lion in the streets." Proverbs 26:13

By Riley J. Hood—Milwaukee County Constitution Party

If there was any mole hill turned into a mountain, it is Covid-19. It isn't e-bola or the Spanish Influenza. Cv-19 is highly contagious, but hardly severe. Two weeks to flatten the curve led to lockdowns, mask mandates and a campaign for mandatory genetic injections. After all the Bernie Bros and middle-of the road people got the shot, a variant was discovered, the Democrat variant, I mean the Delta variant. The Democrat variant a booster shot. The panic over that wore off quickly, and now we have the Oligarch variant, I mean Omicron variant. The Oligarch variant will probably require another booster shot. (Heroin addicts could probably say their habit requires regular booster shots.)

I am not able to update to update you on all the symptoms, but here some: It causes some people to follow the science, but only what the socialist, or government bureaucrat says science is. That means the virus causes those same socialists to call dissenting scientists deniers.

It causes some people to get woke in a cold sweat, and they start saying "racism, racism" over and over, and this condition gets so bad that they insist that all freedom must be taken from the law-abiding citizen, and only criminals should be outside of the jails, and free to congregate, or protest, or riot, as long as the event isn't mostly white people.

It causes some people to smoke marijuana, and then post whatever enters into their minds on Q-Anon. It can cause politicians to say, "drain the swamp," and then leave the un-elected bureaucrats in place. It causes some politicians to say the virus caused all those layoffs and the virus closed all the Churches, while leaving the abortion mills open for killing.

The fact is, a virus is virus, it can make you sick, in this case even mildly sick, but it can't do the above-mentioned things. Those things are done by people, using the virus as an excuse. If history is ever written, because reading and writing isn't a strong suit among today's youth, it should be known as the era of cowardice. Saying "the virus did it," even the dreaded Oligarch variant, is another example of modern irresponsibility.

With Low Vaccination Rates, Africa's Covid Deaths Remain Far below Europe and the US

By Ryan McMaken

Since the very beginning of the covid panic, the narrative has been this: implement severe lockdowns or your population will experience a bloodbath. Morgues will be overwhelmed, the death total toll will be astounding. On the other hand, we were assured those jurisdictions that do lock down would see only a fraction of the death toll.

Then, once vaccines became available, the narrative was modified to "Get shots in arms and then covid will stop spreading. Those countries without vaccines, on the other hand, will continue to face mass casualties."

The lockdown narrative, of course, has already been thoroughly overturned. Jurisdictions that did not lock down or adopted only weak and short lockdowns ended up with covid death tolls that were either similar to—or even better than—death tolls in countries that adopted draconian lockdowns. Lockdown advocates said locked-down countries would be overwhelmingly better off. These people were clearly wrong.

Undaunted by the increasing implausibility of the lockdown narrative, the global health bureaucrats are nonetheless doubling down on forced vaccines—as we now see in Austria—and we continue to be assured that only countries with high vaccination rates can hope to avoid disastrous covid outcomes.

Yet, the experience in sub-Saharan Africa calls both these narratives into question: Africa's numbers have been far, far lower than the experts warned would be the case.

For example, the AP reported this week that in spite of low vaccination rates, Africa has fared better than most of the world:

[T]here is something "mysterious" going on in Africa that is puzzling scientists, said Wafaa El-Sadr, chair of global health at Columbia University. "Africa doesn't have the vaccines and the resources to fight COVID-19 that they have in Europe and the U.S., but somehow they seem to be doing better," she said….

Fewer than 6% of people in Africa are vaccinated. For months, the WHO has described Africa as "one of the least affected regions in the world" in its weekly pandemic reports.

Yet disaster for Africa has long been predicted for several reasons even beyond the availability of vaccines. For instance, it is known that lockdowns are especially impractical in the poorest parts of the world. This is because populations in places with undeveloped economies can't simply sit at home and live off

The Muslim Report: Uganda

"Train up a child in the way he should go: and when he is old, he will not depart from it." Proverbs 22:6

By Riley J. Hood-Milwaukee County Constitution Party-Sent out 11/6/2021

On June 1st, 2021, the Uganda Joint Christian Council, called on Education Minister and First Lady Janet Museveni to eliminate the anti-Christian bias in Ugandan public schools. Currently, God the Father and His Son, Jesus Christ are never mentioned, and God is equated with the Islamic Allah, and Jesus with Isa in the Quran. Uganda is a Christian country, and yet their government is educating children into Islam. God is never Allah and Jesus is never a Muslim.

Janet Museveni isn't a Muslim, that I know. Yowen, her husband and Ugandan President says he attended the University of Dar Es-Salaam in Tanzania, and he is a Marxist. He was trained as a guerilla fighter. He led a rebellion against Idi Amin, and then Milton Obote. He has been in power since 1986. Is it any wonder this pro-Islamic policy is being pursued? On some level he hates Christianity, and his deeds bear that out.

There are two take-aways here. The first is that any and all public schooling is un-Biblical. There is no mandate for the State to educate children to be found in the Bible. Second, Islam of course is violent, but in the beginning they use non-violent ways to advance, and that is just as destructive.

It is an uphill fight in Uganda, when it never should have been. Christian leaders are now trying to remove Khadi courts from the Ugandan Constitution, which in a de-facto sense makes Islam the state-religion, when that properly belongs to Christianity.

Many Americans have problems with that statement, but cases like New York's People v. Ruggles and other cases affirmed that Christianity, was part of the Common Law. Prosecuting attorney Gold argued that the common law of England, as it stood in 1776, was adopted by the constitution and made part of the law of the State. The Milwaukee County Constitution Party affirms this position, and condemns secularism as weakness and failure. Secularism is not a shield against Islam.

Africa's Covid Deaths

cont. from page 14

savings or debt. Rather, these people must go out into the world and earn a living on a day-to-day basis. Starvation is the alternative. Moreover, much of this work is done in the informal economy, so enforcing lockdowns becomes especially difficult.

It was also assumed covid would be especially deadly in Africa due to the fact many large households live in small housing units.

But that "conventional wisdom" flies in

The Muslim Report: America Part 2

"Yet a little sleep, a little slumber, a little folding of the hands to sleep: So shall thy poverty come as one that travelleth, and thy want as an armed man." Proverbs 6:10-11

By Riley J. Hood—Milwaukee County Constitution Party

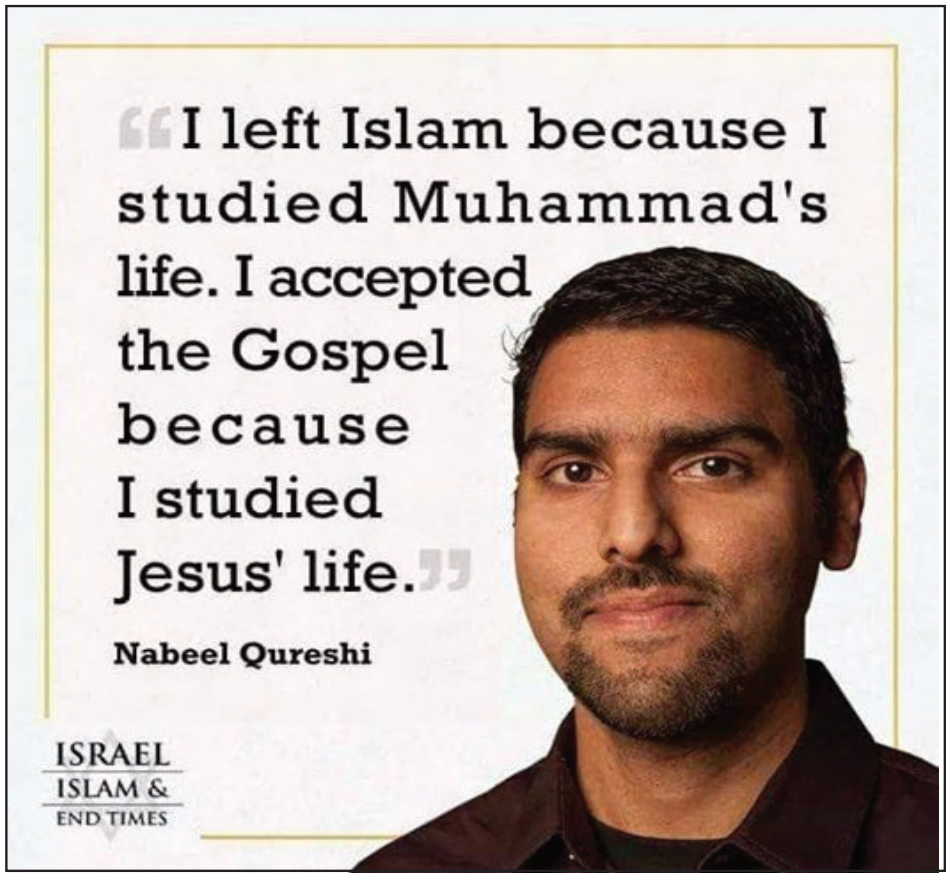
On November 11, 2001 Bernard Lewis published on article in the New Yorker called "The Revolt of Islam- When did the conflict with the West begin, and how could it end?" (It began when Muhamad invented Islam.) Lewis wrote, "President Bush and other Western politicians have taken great pains to make it clear that the war in which we are engaged is a war against terrorism, not a war against Arabs, or, more generally, against Muslims, who are urged to join us in this struggle against our common enemy." After spouting that weak idiocy Lewis said, "Osama bin Laden's message is the opposite. For bin Laden and those who follow him, this is a religious war, a war for Islam and against infidels, and therefore, inevitably, against the United States." Lewis referred to a Bin Laden rant, "in the October 7th videotape, of the "humiliation and disgrace" that Islam has suffered for "more than eighty years." Lewis surmises, "We can be fairly sure that bin Laden's Muslim listeners, the people he was addressing, picked up the allusion immediately and appreciated its significance. In 1918, the Ottoman sultanate, the last of the great Muslim empires, was finally defeated."

In 1918, the Ottoman Empire lost their sense of Islamic superiority when the bloodthirsty Turk was defeated by the Allies in WWI. The last Crown Prince, and Caliph was Abdülmecid lost his title, after the Turkish Government abolished the Sultanate. Even so, Islam was still in its illegitimate place in Asia Minor.

After WWI, lines were redrawn on the map, as Germany, Austria and Turkey lost their empires. Several new nations were created in Europe, out of whole cloth, namely Yugoslavia and Czechoslovakia. Hungary and Poland were granted Independence for the first time in a long time, in Poland's case for over a century.

As much as the map was redrawn by Walter Lippman and company in Europe, it was redrawn even more in what the British call "the Middle East." The Kingdom of Saudi Arabia was a reward to Ibn Saud for working with TE Lawrence. Iraq was created out of whole cloth, and "Iran" known as Persia to normal people, was given to an Army officer who called himself Reza Shah. The League of Nations granted temporary rule to the British and French. The British Mandate included Israel or Palestine and the French Mandate including Lebanon and Syria. After WWII, things changed again as European nations were no longer powers, and their colonies, morally unsuited for freedom were handed independence, because the Imperial power was bankrupt. Such monstrosities came into existence like modern India, Pakistan, Myanmar, and "the United States of Indonesia."

In the mind of the Muslim, any hinderance to their bloodthirsty dreams of rape, murder and power is referred to as a "Satan." Great Britain was seen as the major obstacle, and until shortly after WWII was called "the Great Satan." Even though Britain is riddled with silly Masons, has been post-Christian for 100 years, and never tried to convert the peoples of its empire, it was called the Great Satan because it was a barrier to conquest. In 1979, the Ayatollah Khomeini officially transferred the title of Great Satan over the America. For the last 43 years, these monstrosities have been out to take us over, and barring that, blame all their problems on America, and they get lots of help from the America hating liberal and the morally challenged libertarian. While America has been sleeping, the Muslim has been coming after us, and if they conquer us, poverty and misery will be imposed by violence. As to Mr. Lewis' question, when will it end? When Islam is destroyed, and only then, because even where Islam rules, the violence is more not less, as emotional outbursts of violence are sanctified with an air of devotion, and violence is a permanently imbedded feature of the Islamic mind.



Science must be defended

cont. from page 1

and injustices supposedly permeating our societies.

In their 2020 book, "Cynical Theories: How Activist Scholarship Made Everything about Race, Gender, and Identity and Why This Harms Everybody," authors Helen Pluckrose and James Lindsay explain:

"…we have reached a point in history where the [classical] liberalism and modernity at the heart of Western civilization are at great risk on the level of the ideas that sustain them… the problem arises from the fact that, the progressive left has aligned itself not with Modernity but with postmodernism, which rejects objective truth as a fantasy dreamed up by naive and/or arrogantly bigoted Enlightenment thinkers who underestimated the collateral consequences of Modernity's progress.

"Postmodernism has, depending upon your view, either become or given rise to one of the least tolerant and most authoritarian ideologies that the world has had to deal with since the widespread decline of communism and the collapses of white supremacy and colonialism."

Postmodern thinkers reject the fundamentals of the Enlightenment, a philosophical movement that dominated the world of ideas in Europe in the 17th and 18th centuries. The Enlightenment led to the political philosophy known as "liberalism," which has as its main tenets: freedom of expression, respect for viewpoint diversity and sincere debate, respect for evidence and reason, as well as various political standards we hold dear: political democracy, limitations on the powers of government, the development of universal human rights, legal equality for all adult citizens, the separation of church and state, and freedom of religion.

After centuries of struggle against superstition, slavery, theocracy, colonialism and fascism, liberal values came to be accepted across the western world. This led to huge advances in human rights, science and technology and our standard of living. But all of this is now at risk in a way like never before. Whether it is in our educational institutions, our politics, our churches, medicine, science and engineering, and even our military, woke postmodernists are literally hijacking America while most of the population sleeps.

Most concerning is the way in which the scientific method itself, a process for correcting errors and advancing knowledge of the physical world, is being rejected in favor of supporting politically correct, but devastatingly-false narratives. Our government and mainstream media are increasingly turning their backs on "evidence-based decision-making," a critical feature of the Enlightenment, classical liberalism and the scientific method, in favor of "decision-based evidence-making." In other words, essentially lying by bending the truth to support whatever politically-convenient position the government and the deep state want the public to accept.

To help readers understand the steps involved in the scientific method, and why it is so important to preserve, we include the below flow chart from Encyclopedia Britannica. Note especially one crucially important step in the scientific method, comparing observed experimental results with the hypothesis under investigation. This action, perhaps more than any other is paramount.

The brilliant theoretical physicist and teacher Dr. Richard Feynman explained:

"If it [the hypothesis] disagrees with experiment, it's wrong. In that simple statement is the key to science. It doesn't make any difference how beautiful your guess [hypothesis] is, it doesn't matter how smart you are, who made the guess, or what his name is … If it disagrees with experiment, it's wrong. That's all there is to it."

In the chapter "The Theory of Gravitation" in his text Lectures on Physics Feynman provided an outstanding example of the development of the scientific method. As Feynman states, the ancients observed the movement of the visible planets and the stars and deduced that the planets went around the Sun, a concept rediscovered by mathematician and astronomer Nicolaus Copernicus in the early sixteenth century.

In that century, a great controversy arose over the movement of the planets. In the late sixteenth century astronomer Tycho Brahe made a remarkable step by proposing that the controversy could be resolved by accurate measurements of the planets in the sky. To determine something about the physical world it is always better to make careful observations and conduct appropriate experiments than to engage in deep philosophical discussions.

After Brahe died, mathematician and astronomer Johannes Kepler used Brahe's observations between 1609 and 1619 to develop the primary laws of planetary motion.

Independently, Galileo Galilei used careful experiments to formulate the concept of inertia – if something is moving and is otherwise undisturbed, it will continue moving in the same direction at a uniform speed.

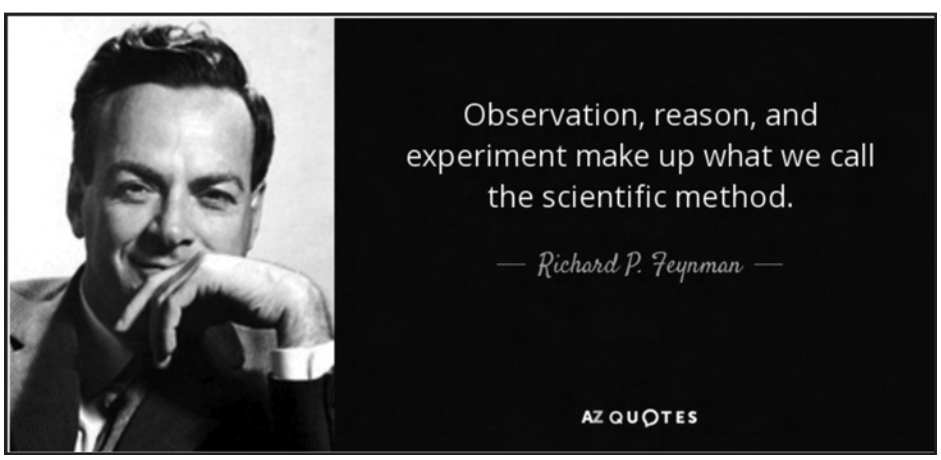
Isaac Newton used the concepts of Kepler and Galileo to develop his law of universal gravitation and his laws of motion that most of us learned in high school.

Careful observations from both experiments and nature were needed to develop the laws of gravity and planetary motion.

With the space age over the past 60 years, the U.S. and others have developed powerful tools for accurately observing and measuring what is occurring in the atmosphere. Certain U.S. centers for climate research, such as the National Center for Atmospheric Research (NCAR) and NASA's Goddard Institute for Space Studies (NASA-GISS) participate in that analysis effort and run large computerized General Circulation Models (GCMs) to project future climate. Most of those using these large models violate the scientific method in that they do not utilize the measurements of the atmosphere to compare and "validate" their models with actual physical evidence. These researchers have essentially yielded to woke postmodernism in that their belief in a climate emergency trumps any conclusions generated by observations of the real world.

Those politically-correct, but scientifically-flawed computational models predict large temperature increases in the distant future, caused by increasing CO2. Their argument presumes that, as a result of modest CO2-driven warming, more water will evaporate and, as water vapor is the dominant greenhouse gas, the warming will be significantly amplified, causing serious problems. However, upon closer scrutiny, the actual measurements show very little temperature rise, and contradict the speculation that increasing (CO2) will cause dangerous global warming.

Nevertheless, once-prominent scientific journals are now refusing to publish competent papers using measurements of what is actually occurring in the atmosphere because they contradict the politically-popular model results. Such entities have abandoned the scientific method to accommodate politically-driven woke postmodernism.



For example, in 2020 Dr. William A. van Wijngaarden of Department of Physics and Astronomy, York University, Canada, and Dr. William Happer of the Department of Physics, Princeton University, submitted a paper titled "Dependence of Earth's Thermal Radiation on Five Most Abundant Greenhouse Gases" to the journal Atmospheric and Oceanic Physics. The paper has been ignored.

The van Wijngaarden and Happer (W&H) paper relies on a comprehensive set of observations and calculations known as HITRAN, an acronym for high-resolution transmission molecular absorption, compiled under an Air Force contract by the Atomic and Molecular Physics Division, Harvard-Smithsonian Center for Astrophysics. It is a compilation of spectroscopic parameters (defining characteristics) that can be used to predict and simulate the transmission and emission of light (electromagnetic energy) in the atmosphere.

Using these data, which apply to cloudless skies, van Wijngaarden and Happer calculated the influence that increasing water vapor, CO2, ozone, nitrous oxide and methane have on temperatures. The observations and calculations confirm that water vapor is the dominant greenhouse gas, but it is not increasing significantly with a warming planet.

Further, van Wijngaarden and Happer showed that the influence of CO2 greatly diminishes with concentrations above one hundred parts per million in volume, which is far less than that which occurs naturally.

At the October 16, 2021 14th International Conference on Climate Change, physicist Dr. Tom Sheahen, vice president of the Science and Environment Policy Project (SEPP), reported why he thought the van Wijngaarden and Happer paper was an outstanding example of using the scientific method to get the physics right. The authors calculated the cumulative radiation leaving the earth, calculated what is delayed in the atmosphere, the greenhouse effect, and found that that the remainder matched satellite measurements of radiation leaving the atmosphere and going into space. No one had done such thorough calculations before and showed it matched observations. Sheahen emphasized that the agreement of calculations with observations is the key factor which certifies that their computational model is correct. That's the proper use of the scientific method.

The W&H model, validated by physical evidence, was used to forecast the effects of increasing greenhouse gases on escaping radiation, which in turn affects temperatures. At current concentrations, increasing water vapor and carbon dioxide have a very little effect on temperatures; the effects are termed "saturated." The impacts of increasing the other greenhouse gases are also tiny.

The W&H method is clearly far superior to that used in the global climate models featured in IPCC reports (and findings by NCAR and NASA-GISS). Those models begin with totally different (and questionable) initial assumptions, and greatly exaggerate atmospheric temperature increases.

The W&H paper demonstrates the folly of "climate science" going woke and ignoring critical physical evidence of what is actually happening in the real world. As long as government "climate science" ignores physical evidence and continues to be mired in the politics of postmodernistic "global warming," it will stagnate just as science stagnated with philosophical discussions on the movement of planets until Copernicus helped pull us into the modern world.

None of this will change the minds of woke postmodern climate change activists, of course. To them, feelings and group identities are more important than the scientific method. But, for the rest of society, those of us who actually care about observational evidence in the real world, it is past time to stand up and call climate campaigners out for the threat they represent to us all—a descent into the chaos of illiberal superstition and dictatorship that blighted most of human existence until the Age of Enlightenment saved us all.

Alarm sounded on increased incidence of stillborns reported among vaccinated mothers

By WorldTribune Staff, December 13, 2021

Canadian doctor Daniel Nagase, MD, responded to questions about a sudden increase in stillborn babies being reported in Canadian hospitals among pregnant mothers who received the COVID vaccines. Two months prior, Great Britain's Dr. Michael Yeadon, PhD, warned the science pointed to pregnancy losses among the vaccinated.

Speaking with a reporter on Nov. 20, Dr. Nagase indicated he believes Canadian health officials are using their positions to block the necessary information from view of medical professionals and the public, The Gateway Pundit reports. Peter McCullough, MD, an American cardiologist who is the world's most cited authority on COVID-19 treatment, expressed the same concern regarding U.S. government authorities at a LifeSiteNews/Truth for Health Foundation online conference on Aug. 4.

Dr. Nagase said part of this information comes from a fellow MD with contacts throughout the Vancouver medical system, who reported doulas who work in women and children's hospitals in one of the birthing centers for Vancouver "had 13 stillbirths in a 24-hour period." "In Waterloo, Ontario, I have a more reliable statistic, that there were 86 stillbirths between January and July," Dr. Nagase declared.

If true, that is an extraordinary increase in fetal deaths.

"Normally, it's only five or six stillbirths every year. So, about one stillbirth every two months is the usual rate. To suddenly get to 86 stillbirths in six months, that's highly unusual," Dr. Nagase said.

The common denominator appears clear: COVID-19 vaccination.

"The most important confirmation that we have from the Waterloo, Ontario report was that all of the 86 stillbirths were fully vaccinated," Dr. Nagase said. "We are seeing a correlation.... You have to ask yourself, what is going on that is both in Waterloo, Ontario and Vancouver that is suddenly causing an increase in stillbirths?"

The stillbirths that Dr. Nagase's colleagues are reporting appear to have been anticipated by Dr. Michael Yeadon, PhD, earlier this year. Dr. Yeadon, is the former Chief Scientific Officer at Pfizer, UK. He laid out the science behind the risks mRNA COVID-19 vaccines pose for women's reproduction during the Aug. 4 online conference.

Dr. Yeadon called attention to a study the Japanese medicines regulator required of Pfizer on how the vaccine distributed through the body in rats, something that is not required in the U.S. and Europe.

"To my horror, what we find is the vaccine [in rats] doesn't just distribute around the body and then wash out again, which is what you'd hope," Dr. Yeadon said. "It concentrates in ovaries of rats, and it concentrates at least 20-fold over the concentration in other background tissues like muscles."

"In toxicology, if you don't have any data to contradict what you've learned [in the animal study], that is the assumption you make for humans," he continued. "So, my assumption at the moment is that that is what is happening to every female who's been given these vaccines. These vaccines are concentrating in her ovaries. That is very worrying. We don't know what that will do, but it cannot be benign, and it could be seriously harmful, because the vaccines will then express the coronavirus spike protein and we know that there are unwanted biologies from that spike protein."

Another significant concern is that the coronavirus protein is "faintly similar, not very strongly, but faintly similar to an essential protein in your placenta, something that is absolutely required for fertilization, for formation, and maintenance of the placenta. So, you can't get pregnant and have a successful pregnancy if this protein is damaged in any way. And we noticed that the coronavirus spike protein was similar, similar enough that I was worried," Dr. Yeadon said.

Eight months earlier, he and a German doctor had petitioned the European Medicines Agency to perform experiments to rule out the possibility that the vaccines would produce an immune response that would attack this essential protein in the placenta.

"Now a study has just come out a few weeks ago and it says exactly what I was worried about," Dr. Yeadon explained. "Fifteen women were given Pfizer vaccine. They drew blood samples every few days, and they measured antibodies against the spike protein, which took several weeks to appear, and they also measured antibodies against the placenta. They found within the first one to four days an increase of two and a half to three times. An increase of 300% in antibodies against their own placenta in the first four days."

"I'm sorry to say this," Dr. Yeadon continued, "but that is a vaccine-induced autoimmune attack on their own placenta. I think you can only expect that that is happening in every woman of childbearing potential – is generating antibodies against this critical protein required for fertilization and successful pregnancy. Now, what the effect will be, we can't be certain. It can't be benign."

Whether it would cause loss of pregnancies, Dr. Yeadon concluded, "I don't know if it would be enough to cause first trimester losses, but I would think it would. I've looked at the literature. Women who are unfortunate enough to have autoimmune diseases tend to have high rates of first trimester losses. What this vaccine has done is induced an autoimmune response. I'm here to warn you if you are of childbearing potential or younger, not at menopause, I would strongly recommend you do not accept these vaccines."

Ultimately, the records needed to answer these questions, Dr. Nagase says, are in the hands of the health authorities and they are refusing to release them without legal coercion.

Dr. Nagase believes health authorities may be dodging the correlation by using the technical definitions of "vaccinated" to avoid scrutiny. At less than two weeks after the second shot, an individual is still considered "unvaccinated" because the vaccine is not yet fully effective. "They're saying it's 'unvaccinated people,' but there are so many people who are within two weeks of their second shot and they are getting deathly ill."

"We deserve to know how many percent of the ICU is filled with people who are having side effects within one week of the injection. And then, if they are clogging the

products.

Inexcusably, we are fecklessly, perhaps irreversibly, abandoning these freedoms at an alarming pace, allowing an ever-creeping intolerant culture of conformity to abridge and cancel thoughts and actions that dare to contradict neo-Marxist ideology and agendas.

Free Speech:

Criminal indictments issued by U.S. Special Counsel John Durham leave no doubt that Russia collusion charges that dominated the mainstream media drumbeat throughout the Trump presidency were based entirely upon a fraudulent dirty trick opposition research report funded by the 2016 Clinton campaign and Democratic National Committee.

The nation endured another media festooned political impeachment parade concerning President Trump's 2019 telephone conversation with Ukraine's president, Volodymyr Zelenskiy, mentioning legitimate security concerns regarding Vice President Joe Biden's public braggadocio about withholding a billion U.S. taxpayer dollars unless he fired the prosecutor who was investigating a corrupt energy company that was paying son Hunter $50,000 monthly as a no-show board member.

On the other hand, the media actively blocked releases of that and other Biden family foreign influence peddling evidence found on Hunter's "laptop from hell" that far eclipsed any corruption for which President Trump was falsely impeached (and acquitted).

Major news networks and social media titans censored a headlined New York Post

Africa's Covid Deaths

cont. from page 15

the face of the reality of covid in Africa, which is that there have been fewer deaths.

The "experts" have groped around, looking for possible explanations.

Some sources, for example, insist that the low death totals are only an artifact of incomplete reporting on covid infections and that "a lack of good qualitative data was the issue."

But Richard Wamai at Northeastern University rejects the claim it's all about case reporting, and says that "local systems for reporting deaths in Africa make it difficult to hide COVID-19 casualties." In a paper for the International Journal of Environmental Research and Public Health, Wamai and his coauthors conclude, "[T]here is no evidence that COVID-19 mortality data is less accurately reported in Africa than elsewhere" and "While the true picture of infections and mortality in the continent has yet to fully emerge, the quality of data for other diseases, such as HIV/AIDS, indicates that Africa has the capacity to collect and report valid disease surveillance data."

In any case, the World Health Organization reports that covid deaths in Africa make up only 2.9 percent of covid deaths, while Africa's population is 16 percent of the global total. Africa's covid total could double or triple, and Africa would still be faring far better than Europe and the Americas.

Wamai et al. also note that at this point "[i]t is likely that SARS-CoV-2 has already been widely disseminated through Africa.… If so, widespread infection is likely to also result in widespread natural immunity."

In other words, continued claims by health officials—both in Africa and elsewhere—that mass death is right around the corner with the "next wave" look increasingly implausible.

It looks increasingly likely that the lack of covid mortality in Africa is not due to a data issue nor a situation in which covid has been "contained" up until now. So then why is Africa doing so much better than the wealthy West?

Naturally, the advocates of forced lockdowns and coerced vaccines would prefer to ignore this issue altogether, but the undeniable reality of Africa's experience has forced mainstream researchers to publicly admit the many ways that many factors can explain covid's prevalence beyond vaccination rates and mask mandates.

For instance, mentioning that obesity is an important factor in covid mortality has in the past been likely to get one savaged in the media for "fat shaming." Yet the Africa situation has forced the well informed to admit that yes, obese populations clearly suffer more from covid. In Africa, not surprisingly, we find that obesity rates are far below those found in North America and Europe.

Other possible explanations forwarded as reasons for Africa's situation include past exposure to other coronaviruses, youthful populations, fewer patients lacking zinc and vitamin D, past use of the Bacillus Calmette-Guérin vaccination, climate, genetic background, and parasite load. In addressing the African "enigma" one group of researchers in the journal Colombia medica dared even suggest it's possible—although not conclusively shown at this point—that "a mass public health preventive campaign against COVID-19 may have taken place, inadvertently, in some African countries with massive community ivermectin use."

In the West, however, the media drumbeat around covid has consistently been "Shut up, stay home, get jabbed, and stop doubting the experts on forced vaccines." Fortunately, however, the African situation has forced many researchers to ask inconvenient questions.

In fact, it's amazing Africa has not been overcome by mass death considering that covid lockdowns and covid "mitigation" measures have contributed to the impoverishment and mass starvation on the continent. Or as Germany's DW News puts it, "Measures put in place to slow the spread of the novel coronavirus are pushing millions of people in Africa into severe hunger." And as Wamai notes, "[S]ome of the excess deaths in Africa "can be attributed not to the disease, but to lockdown measures that cut off access to medical care for other illnesses."

But Africa hasn't gotten the bloodbath that was promised, and as one Nigerian put it, "They said there will be dead bodies on the streets and all that, but nothing like that happened."

'Land of the Free'

cont. from page 17

story revealing that then-presidential candidate Joe Biden had met with his son's business partners during 2013 trip to Beijing aboard Air Force Two . . . followed 10 days later by a $1.5 billion deal for Hunter's firm with a Communist state-owned Bank of China.

Another — among several — Biden Inc. media coverups involved Hunter's May 2017 dealings with CEFC, a now-defunct Shanghai-based energy company with broadly known Communist government and military ties, that proposed that the "big guy," confirmed to mean Joe Biden, receive 10% of the venture's equity.

Recall also that media cancel culture has spread to cover up the COVID pandemic origin.

The liberal New York magazine's recent cover story, "The Lab-Leak Hypothesis," belatedly concludes that COVID-19 is a human-engineered virus that escaped from a Wuhan laboratory.

This is the very same theory that moved Facebook to suppress a February 22, 2020 New York Post column by Steven Mosher even suggesting that possibility as "false information."

We now also know that the mainstream media has failed to hold the top U.S. government virology authority, Dr. Anthony Fauci, accountable for falsely and repeatedly stating under oath before Congress that his National Institute of Allergy and Infectious Diseases has "unequivocally" never funded Wuhan lab gain-of-function research that may have contributed to the pandemic.

A letter to Rep. James Comer, R-Ky., from NIH's principal deputy director, Lawrence A. Tabak, clearly says otherwise.

Free Assembly:

We are also currently witnessing tensions and controversies between police powers and right to free assembly are further complicated by various laws that provide for additional government powers during times of disaster and emergency, in this case, various federal, state and local assembly shutdown responses to the COVID-19 pandemic.

Whereas on one hand we recognize that government has the police power to protect the health, welfare and safety of its citizens, our Constitution's First Amendment also guarantees that no law may "abridge the freedom of speech, or of the press, or the right of the people peaceably to assemble."

The big kicker here is that state police powers granted to various state legislative and executive branches by the 10th Amendment typically apply only when these laws don't infringe on other constitutional rights.

Adding to the confusion are scientifically conflicting and constantly changing situational updates regarding responses to this new threat which most appropriately balance protection of most vulnerable populations and the overall physical and economic health of broader communities.

Contentious COVID response policy disagreements have exacerbated preexisting conservative/libertarian versus radically liberal divisions, with the former strongly favoring individual responsibilities and freedoms over repressive government mandated and enforced business and activity restrictions.

An accelerating blue state business exodus and rampant [F***] Joe Biden — "Let's go Brandon" — chants at crowded sports events reveal trending rejections of unwarrantedly repressive police state policies.

Free Enterprise:

While they still hold the control of Congress and White House, the Bernie Sanders-Joe Biden administration is bound and determined to jam through, by far, the largest socialistic debt and inflation-producing legislation in our nation's history.

Claims that their party's proposed $1.85 trillion in new spending over the next decade to end climate change and put the federal government in charge of our lives and livelihoods will "pay for itself" without penalizing wage earners are farcical . . . not to mention that this doesn't even come close to the actual costs.

And whereas the Congressional Budget Office (CBO) published an initial cost estimate that the package would increase the federal budget deficit by $160 billion over 10 years — $2.2 trillion rather than $1.85 trillion — this doesn't account for cost-hiding gimmicks such as phony program phase-outs that put the true expenditures closer to twice that amount once they become permanent.

The largest piece of the bill, $555 billion in climate programs is to forcibly shift the U.S. economy away from the 85% of reliable world energy that comes from fossil sources by increasing from the 3% of seasonal and weather dependent wind and solar systems we buy from China which is building the equivalent of one coal-fired plant weekly to achieve "net-zero" global greenhouse gas emissions.

On top of that, Biden's Build Back Broke plan proposes to replace the current 98% of petroleum fueled cars and trucks by government subsidies and mandates that grow the current 2% of electric vehicles (EVs), add them to already overloaded power grids, and purchase the rare earth minerals required for all those intermittent solar, wind, and EV batteries from China which controls 85% of the global supply.

It's not as if America doesn't have rare earths of our own . . . we have plenty.

The problem is that environmental activists don't want us to mine them, and the Biden administration is considering a 20-year delay of new rare earth mining operations in northern Minnesota.

Meanwhile, amid global energy shortages and skyrocketing prices, the Biden administration has worked to end American energy independence by capping off the Keystone XL pipeline from Canada and drilling permits in the Arctic National Wildlife Refuge (ANWR), while simultaneously giving President Vladimir Putin a pass to complete Russia's Nord Stream 2 pipeline under the Baltic Sea to sell natural gas to Europe that we could have provided.

As a result, analysts predict it might not have to get extraordinarily cold this winter for prices to reach heights unknown during the shale era which transformed the U.S. from a gas importer to supplier to the world.

All these policies to curtail American oil, gas, and coal production empower adversaries, especially China, Russia, and Iran . . . countries that hold none of the appeal that continues to attract freedom-seeking immigrants to this rich land of opportunity we too often take for granted.

Vaccination Card

I walked into a New Orleans restaurant to have dinner tonight and was greeted with "do you and your guest have your vaccination cards with you?". Here is what actually transpired:

Hostess : Hello.

Patron : Hi, table for two, please.

Hostess : Sure, and your name.

Patron : Tracy.

Hostess : Great. And do you and your guest have your vaccination cards?

Patron : We do. Can you tell us who our server will be?

Hostess : Um, looks like Tom will be your server tonight.

Patron : Great. Can you show us Tom's vaccination card?

Hostess : Um…

Patron : And also, can you provide me with proof that Tom is not amcarrier of HIV, Hepatitis A or B, or any other communicable diseases such as VD?

Hostess : Um…

Patron : Also, we would prefer not to be served by someone who is on or uses recreational drugs such as marijuana, cocaine, meth, fentanyl, etc., so if you could provide us with Tom's most recent tox screen, that would be great.

Hostess : Um... Let me get the manager for you.

Patron : That would be great, thanks…….

Stay safe and healthy!

URGENT: Australian Aboriginal Community Issues SOS Call to the World For Help Against Genocide

By Daniel G.

Australian Aboriginal elder June Mills made a chilling plea for help to the world about what's transpiring in Australia's Northern Territory.

Mills shouted that Australian forces were injecting her people against their will and sending them to COVID-19 quarantine camps.

She screamed with rage that "they're killing us" and it's a "program of elimination."

Later footage surfacing from Australia shows Aboriginal community members making a desperate SOS call for help to the world.

Trending: REPORTS: FDA Accused of Colluding with the USPS to Stop & Destroy Packages of Ivermectin Mailed to Patients

They claimed the Northern Territory government is force inoculating their people and pressuring them via the military and police officers.

And those fleeing the community to avoid the forced injections receive $5,000 fines.

The community members accused the Northern Territory government of war crimes and crimes against humanity.

Critically-ill Covid patient made full recovery after court order allowed him ivermectin

By WorldTribune Staff, December 2, 2021

A 71-year-old critically-ill Covid patient in Naperville, Illinois has made a full recovery after being treated with ivermectin.

Sun Ng spent 22 days on a ventilator and had been repeatedly denied ivermectin until a court ordered the hospital to allow the drug to be administered.

On Thanksgiving weekend, Ng was discharged from Edward Hospital in Naperville following a successful treatment cycle of the drug that many on the Left and in Big Media continue to insist is horse de-wormer that is not a safe or effective treatment for Covid, according to a press release distributed on behalf of Mauck & Baker law firm in Chicago.

The hospital had only agreed to allow the use of the drug after Ng's daughter, Dr. Man Kwan Ng, obtained a court order mandating compliance.

"My father's recovery is amazing," shared Dr. Ng said in the release. "My father is a tough man. He was working so hard to survive, and of course, with God's holding hands. He weaned off oxygen about three days after moving out of the ICU. He started oral feeding before hospital discharge. He returned home without carrying a bottle of oxygen and a feeding tube installed to his stomach. He can now stand with a walker at the bedside and practice stepping. After being sedated for a month on a ventilator in ICU, his performance is beyond our expectations. Praise the Lord."

LifeSiteNews had previously reported on the hurdles that were put up to keep Ng from getting ivermectin, even with a court order.

On Nov. 9, Judge Paul Fullerton of the Eighteenth Judicial Circuit Court in DuPage County, Illinois, had granted Dr. Alan Bain access to the hospital for the purposes of administering ivermectin to Ng.

"Despite the court's decision, the hospital refused Bain entry on the grounds that he was not vaccinated against COVID-19," LifeSiteNews reported.

An Emergency Report was filed with the court and, after brief argument from both parties, Judge Fullerton admonished Edward Hospital's representatives and restated that he ordered them to let Dr. Bain in.

The hospital then complied with the judge's request, and Bain was granted access to the facility.

While federal regulators, drug makers, Big Media and Big Tech continue to suppress the medication, leading experts including Dr. Peter McCollough, Dr. Vladimir Zelenko, Dr. Robert Malone and the 12,700 doctors and scientists who signed the Rome Declaration have endorsed ivermectin as a Covid treatment.

End to mass vaccination

cont. from page 1

diseases and vulnerable populations, recommended an alternative approach to Covid-19 in what was called the Great Barrington Declaration. Because they are very concerned about the side effects of mass vaccination on populations.

What do they advocate? A "focused" protection. That is to say, to protect as much as possible the elderly, the infirm, the frail and to leave the others to live normally until the society reaches the collective immunity. However, mass vaccination by mRNA makes this collective immunity impossible.

One of the original co-signatories was Dr. Simon Thornley, an epidemiologist and biostatistician at the University of Auckland. The Great Barrington Declaration has since been signed by 60,000 physicians and scientists and is becoming increasingly well known around the world. A petition has so far gathered 870,000 signatures of support.

"The Great Barrington Declaration – As infectious disease epidemiologists and public health scientists we have grave concerns about the damaging physical and mental health impacts of the prevailing COVID-19 policies, and recommend an approach we call Focused Protection.

Coming from both the left and right, and around the world, we have devoted our careers to protecting people. Current lockdown policies are producing devastating effects on short and long-term public health. The results (to name a few) include lower childhood vaccination rates, worsening cardiovascular disease outcomes, fewer cancer screenings and deteriorating mental health – leading to greater excess mortality in years to come, with the working class and younger members of society carrying the heaviest burden. Keeping students out of school is a grave injustice.

Keeping these measures in place until a vaccine is available will cause irreparable damage, with the underprivileged disproportionately harmed.

Fortunately, our understanding of the virus is growing. We know that vulnerability to death from COVID-19 is more than a thousand-fold higher in the old and infirm than the young. Indeed, for children, COVID-19 is less dangerous than many other harms, including influenza.

As immunity builds in the population, the risk of infection to all – including the vulnerable – falls. We know that all populations will eventually reach herd immunity – i.e. the point at which the rate of new infections is stable – and that this can be assisted by (but is not dependent upon) a vaccine. Our goal should therefore be to minimize mortality and social harm until we reach herd immunity.

The most compassionate approach that balances the risks and benefits of reaching herd immunity, is to allow those who are at minimal risk of death to live their lives normally to build up immunity to the virus through natural infection, while better protecting those who are at highest risk. We call this Focused Protection.

Adopting measures to protect the vulnerable should be the central aim of public health responses to COVID-19. By way of example, nursing homes should use staff with acquired immunity and perform frequent testing of other staff and all visitors. Staff rotation should be minimized. Retired people living at home should have groceries and other essentials delivered to their home. When possible, they should meet family members outside rather than inside. A comprehensive and detailed list of measures, including approaches to multi-generational households, can be implemented, and is well within the scope and capability of public health professionals.

Those who are not vulnerable should immediately be allowed to resume life as normal. Simple hygiene measures, such as hand washing and staying home when sick should be practiced by everyone to reduce the herd immunity threshold. Schools and universities should be open for in-person teaching. Extracurricular activities, such as sports, should be resumed. Young low-risk adults should work normally, rather than from home. Restaurants and other businesses should open. Arts, music, sport and other cultural activities should resume. People who are more at risk may participate if they wish, while society as a whole enjoys the protection conferred upon the vulnerable by those who have built up herd immunity."

stillborns reported among vaccinated mothers

cont. from page 17

ICUs because they are getting a vaccine injury, but then they're being labeled as unvaccinated, that is an absolute lie."

"We need to get Freedom of Information Requests. We need doctors, nurses, unit clerks at hospitals to start printing out the statistics because we know if we ask the health authorities to print out the statistics they will refuse and that is absolutely criminal," Dr. Nagase said. "We should not be asking some administrator for permission to get the death statistics," he continued. "We should not have to ask some kind of health minister for permission to get the actual rate of [intensive care unit] stays."

REPORT: Slovenia Nurse Whistleblower Claims Politicians & Elites Get Placebo Instead of mRNA COVID-19 Jab; True or Misinformation?

By Daniel G.

Shocking reports have circulated out of the eastern European country of Slovenia that, if verified, would cause a vengeful reaction of epic proportions.

Now, there's a lot of uncertainty regarding a nurse whistleblower's statement about the COVID-19 jabs and some information I'll have to fact check.

The controversy stems from a press conference given by the former head nurse of the University Medical Center in Ljubljana.

According to reports, she claimed that politicians and other high-ranking citizens receive saline instead of the mRNA experimental COVID-19 injections.

The nurse, who coordinated the receiving and managing of the vials, stated they contained codes where each bottle would say 1, 2, or 3.

She explained that #1 is a placebo, saline.

In the press conference, the nurse claims that 30% of the population receives the placebo.

Recipients won't know if they get the placebo or the mRNA injection.

Someone in the crowd asks if the administrators know who gets the placebo, and she states that they know and you don't know.

For #2 and #3, Daily Telegraph shared this shocking claim:

Number 1 is the placebo, saline. Number 2 is a the mRNA. The number 3 is an mRNA stick that contains the onco gene, linked to the adenovirus that contributes to the development of cancer. She said those receiving the number 3 bottle will develop soft tissue cancer within two years of receiving the jab.

She says she personally witnessed the jab of all the politicians and tycoons and everyone who received the number 1 bottle, claiming they received the saline solution, a placebo. This explains why the same person administers the jab to politicians when they take pictures for the media.

That's a WILD accusation that would surely bring the wrath of citizens upon politicians, elites, pharmaceutical companies, and injection administrators.

BUT, is that accurate?

I've had to investigate to complete some fact checks on this.

The roughly 20-minute press conference is actually on Facebook but lacks subtitles.

Scroll through the comments, and you'll notice tons of people asking for a translation.

I found one translation in Italian that Facebook translated into English.

To summarize, this translation stated the nurse mentioned 30% being a placebo and the codes containing 1, 2, and 3.

However, it explains the video did NOT go into detail about what codes 2 and 3 contain.

Also, there's no statement about witnessing the inoculation of politicians.

Until a full English translation is available or a primary source confirms the remaining content of the press conference, I must say unverified for now.

Another piece of information I must fact check is the date of the press conference.

Black Is Black – White Is White – A Is A – There Ain't No Grey

By Kathleen Marquardt

It's been almost a year, and in spite of the fact that most people were watching their televisions almost non-stop on January 6 and 7, 2021, most did not understand they were watching a false flag operation. They saw what the Deep State/Globalists (DS/G) wanted them to see – an attack on the Capitol by Trump supporters. Media added the false "shootings and beating by the conservatives.

The people did see a coup happen, yet many (most) don't realize it. We were told that the actions on the 6th in the Capitol by the crowd was an insurrection. But, when the walls, barriers, fencing went up "protecting the people inside", there was silence. No explanation. That, should have signaled us that a coup had been successfully staged and achieved – by the DS/G. We The People are no longer allowed to enter; a puppet government has been put in place. Yet we hear not a word from those in place or from the people they are now controlling through their actions – us! And, because all watch MSM, most people are referring to Biden as President of the United States, and Harris as Vice President. They are not.

The populace knows that Biden isn't capable of having a coherent thought, let alone run a country. Yet, they send out tweets and posts about "what Biden's program on such-and such is", or his take on the stolen election. From day one (January 6), we should be using the Deep State or Globalists, because they are the ones running things and feeding Biden all his lines (whether he reads them correctly or not). Instead, the people are doing exactly what the Globalists want – sitting on their bums and doing nothing but whining about Biden's latest directive. We have no sitting president. We have no government. Biden and Harris are paper dolls – poorly drawn ones.

Look at the Cabinet the Globalists put in place – the freakiest, most ignorant, offensive people they could find for each post. And everyone sits there, complains, and not one seems to understand that we ourselves are being ridiculed by the powers-that-be for putting up with this travesty.

I understand that our forefathers lived in a much smaller universe, where they could organize and warn people when things happened. We have resources; we could organize. But, as F.A. Hayek wrote in The Road to Serfdom, "Facts and theories must this become no less the object of an official doctrine than views about values. And the whole apparatus for spreading knowledge – the schools and the press, radio, and motion picture – will be used exclusively to spread those views which, whether true or false, will strengthen the belief in the rightness of the decisions taken by the authority; and all information that might cause doubt or hesitation will be withheld. … Everything which might cause doubt about the wisdom of the government or create discontent will be kept form the people. … There is consequently no field where the systematic control of information will not be practiced, and uniformity of views not enforced."

Over time, our populace has been cowed; many are afraid that there might be some truth to the lies we are being told. They don't want to be challenged to defend a position they are not sure of; and they are not sure of their position because they do not study any of the issues in depth, but often get by on other's tweets and posts. That, and they have not thought deeply about any issue. They have been dumbed down for years without realizing it and trained to bow to the peer pressure of political correctness.

It is very difficult to undo the lies. I worked with a secretary who, early on, fed me a lot of details about things in the firm. After some nine or ten months, I realized she was a compulsive liar. Then, I tried to go back and figure out what things she had told me so I could take them out of my head. It can't be done. You can get rid of some, but after years in the school system and watching mainstream media, there are too many lies that are there telling you they are God's honest truths. (To read more about how people's minds have been captured, see endnote 2.) [i]

Until we accept that a coup has overthrown our government; that we acknowledge that both parties are complicit; until we call a spade, a spade we cannot begin to take back our country. Biden is not our President; we have no president now. If we do in the future, it will be up to you and me. To do so, we must know the enemy.

Bill Clinton's Executive Order 13107[ii], was written to usurp our Constitution by the United Nations Declaration on Human Rights. On December 10, 1983, under this EO, the U.N.'s Earth Charter was to be our law of the land. Under our Constitution, "pursuant to Article II, section 2, clause 2, "treaty obligations" shall mean treaty obligations "as approved by the Senate". Did the Senate ever approve of this? Too many things over the last decades, especially the last three decades, have been done totally ignoring our Constitution and founding documents. This EO, not only made U.N. doctrine "the legal standard for all U.S. policy and legislation, but it also created a new "federal oversight agency that has the task of monitoring both state and federal laws to ensure compliance with the ratified and unratified (see Agenda 21) U.N. treaties. Our Constitution is still there but being ignored.

We didn't get to this point just in the past year or two. For decades our government has been gutting the Constitution, and changing the way our government works, It was a constitutional republic. As it is now, it is in the last stages of becoming a technocracy.

As I wrote in my previous article "Cancel Culture: Reinventing Government", two ideas were central; first, the unconditional need to transfer power from Congress to the executive branch. Second, that government employees need to be empowered. 'This approach implies a transfer of power from Congress to the bureaucracy." [iii] Congress is, and has been, being bypassed for some time, through the transfer of power to the executive branch. "In other words, the balance of power has shifted, destroying the checks and balances in the constitution at the local level and, therefore, destroying representative government. This power shift is a philosophical shift to a completely new form of government. It is a merger between government, corporations, and non-governmental organizations.'" [iv] This reinventing of government is more the converting of a constitutional republic into soviets, but under less offensive (but no less despicable) names.

Here they are call councils, but, in reality, they are soviets – unelected bodies that spew more laws, rules, regulations than even Congress could make, all because there are dozens of these councils. And they are regional – from counties up to national. Think of East Tennessee Quality Growth, which is a 16-county Sustainable Development council. There are also the Departments within the regional councils – Homeland Security, Housing and Urban Development, Environmental Protection Agency, Department of Agriculture, and on and on and on. Even the Department of Justice.

Again, I chastise those in Congress who pretend that "all is well" and America is still the stronghold of Liberty. Watching you tell us what we need to be doing – all the while that the Deep State/Globalists are dismantling our once greatest country the world had ever seen and replacing it with a dictatorship that cannot be overwhelmed by force because it is run by the global mega-corporations.

There is no magic wand to bring the Great American Experiment back, but we can rebuild it piece by piece locally. And there are great patriots doing just that – Not only in America but Canada and other places. Truth will not die.

First, we must speak the truth, the truth that a coup occurred, and we are living under direction of foreign interests as well as the evil intended Deep State. The most effective way we can fight back is locally. Take back our country from the ground up.

"Black is Black – White is White – A is A – There ain't no grey" Ditty is from Tom DeWeese

'American Gulag'

cont. from page 1

begin with.

"These prosecutors and judges are scared to death of going to trial.

"How do I know this? Out of 600 + defendants, not a single trial has yet to proceed."

Meanwhile, National File and Georgia Republican Rep. Marjorie Taylor Greene helped expose the deputy warden at the D.C. gulag as a virulent anti-Trumper.

"F--k everyone who supports Trump," was one of the vile social media posts made by Kathleen Landerkin, the current Correctional Training Facility (CTF) Deputy Warden at the Department of Corrections in the District of Columbia, who assists in overseeing day to day operations, inmate transportation, and case management.

"Though she holds a position of power over January 6 inmates, Landerkin continued to spout anti-Trump and anti-Republican rhetoric on her Twitter until she deleted her account earlier today," National File reported on Saturday.

Alex Brusewitz, the CEO of XStrategies, conducted an advanced search of Landerkin's Twitter posts by typing "Trump" and dozens of anti-Trump tweets came up such as "The Trump family is a crime family and the GOP in [sic] complicit," and "Trump is doing more damage to this country then [sic] foreign terrorists ever have."

While the Left and its Big Media allies mostly ignore social media posts such as those made by Landerkin, every scrap they can dig up from Jan. 6 detainees is used to press the narrative of a "violent insurrection."

That includes a benign post which included "lol" which set off U.S. District Judge Amy Jackson.

Earlier this month, Jackson read aloud some of Russell Peterson's posts about before she sentenced the Pennsylvania man to 30 days imprisonment. "Overall I had fun lol," Peterson posted on Facebook.

"The 'lol' particularly stuck in my craw because, as I hope you've come to understand, nothing about January 6th was funny," Jackson added. "No one locked in a room, cowering under a table for hours, was laughing."

Lol indeed.

Trump: What happened to Arizona audit? Former NYC Police Commissioner to release 'massive trove of evidence'

By WorldTribune Staff, November 24, 2021

Mark Brnovich, the Republican attorney general of Arizona and a U.S. Senate candidate, opened an investigation after the myriad of irregularities found in the audit of Maricopa County's 2020 ballots.

"The great Patriots of Arizona are anxiously awaiting the Attorney General's review of the large-scale Election Fraud that took place during the 2020 Presidential Election," former President Donald Trump said in a statement issued via his Save America PAC after the audit. "The findings of the Forensic Audit Report were clear and conclusive."

That was in September.

Trump asked in a Nov. 23 statement: "Whatever happened to the Rigged and Stolen Arizona Presidential Election that is being investigated, or maybe the words should properly be 'looked at,' by Attorney General Mark Brnovich? When will the legislature vote to decertify?"

Trump added: "People are very upset in Arizona that it is all taking so long, especially when the findings of the State Senate's Forensic Audit were so conclusive, not even including the recent revelation of 35,000 fictitious votes in Pima County, and precincts with over 100 percent turnout (how do you like that one?). The people of Arizona are anxiously awaiting the decision of the Attorney General. They know what really went on during that Election!"

Arizona Senate President Karen Fann said in a Nov. 1 interview that Brnovich's office has the responsibility of acting on the audit's findings, as well as Maricopa County's potentially illegal obstruction of the investigation.

"Our job is policy. Our job is to make laws, make sure they're working, and change or update laws as necessary," Fann said. "It is the Attorney General's office's to enforce those laws. So, we are on a dual path now. We have turned everything we have, so far, over to the Attorney General.

Fann said that Brnovich "is seeking not only all the information we have, but he is digging further into information that other people have gathered, even outside of the audit. So – that's his job. He is going to hold people accountable."

Meanwhile, Trump said he has released former New York Police Commissioner Bernard Kerik to testify before the Jan. 6 commission.

"The Unselect Committee issued a subpoena to Bernie Kerik, an American Patriot and great former Police Commissioner of New York City, for its Jan. 6th Witch Hunt, but didn't realize what they were demanding is a massive trove of evidence of Voter Fraud," Trump said. "According to Bernie's lawyer, these documents show significant indicators of fraud in the 2020 Presidential Election Scam, but have remained hidden from the public. It is exactly what the Unselect Committee should be interested in — if this was a real investigation."

Trump added: "Bernie wants to comply with the subpoena with a public hearing, and asked me to waive attorney-client privilege so Bernie can testify and provide documents, which I grant him. The Unselect Committee will not like what they asked for!"

"The Democrats are feasting on January 6th, with no Republicans on the Unselect Committee (Cheney and Kinzinger are not Republicans!) but they are refusing to even discuss the root cause of that protest, which was the insurrection that took place during the November 3rd Presidential Election," Trump added. "We had a Rigged and Stolen Election in our Country, the proof is voluminous and everywhere, but the Democrats refuse to even mention or discuss it. It's called Cancel Culture, and until that is done, this Country will never heal!"

Letter to Editor
Has the American Flag become a dancing meme?

Am I the only one that has noticed, or has the American flag become a dancing meme? Politicians have, in the past three years, ordered the lowering of the flag so often that it has lost its meaning as a symbol of mourning or distress.

Noticing this caused me to wonder how this came to be. It used to be that the flag was reduced to half-staff when a president or governor died. Occasionally it was ordered to commemorate collective war dead on a significant anniversary of a battle, or a firefighter or police officer who died heroically in the line of duty. Why the uptick in flag lowering?

One thing I have noticed is that often the lowering of the flag done for what used to be insufficient reason for such a salute, is done at a time when the politician making the declaration has a need for positive, or at least neutral mention in the press.

Things may be going badly in the statehouse or in Washington D.C., and from nowhere, remains of a soldier lost in a war decades ago are repatriated and afforded the honor of the flag being lowered in their name. I'm not saying that the sacrifice of that soldier is insufficient cause for the salute. But we don't dip the flag for every single person killed in combat.

More recently it has been the case that flag salutes are afforded at opportune times in order to support a particular agenda. In Wisconsin, embattled Governor Tony Evers recently declared that the flag be lowered in honor of a State Trooper who died of COVID-19. Again, a LOT of people have had that diagnosis as the cause of death on their death certificate. Should we lower the flag for each of them?

Thus the exercise becomes a public relations ploy that can never reflect badly on the politician responsible, while at the same time cheapening the effect of lowering the flag as a sign of respect for the departed. After all, if everyone is a hero, no one is a hero.

Ultimately, the narcissism of the politician making such orders shines through. The honor offered isn't about honoring the fallen. It's about bringing positive attention to and bolstering the image of the one putting out the proclamation with his or her signature on it.

-Mike Jacob

Slovenia Nurse Whistleblower

cont. from page 19

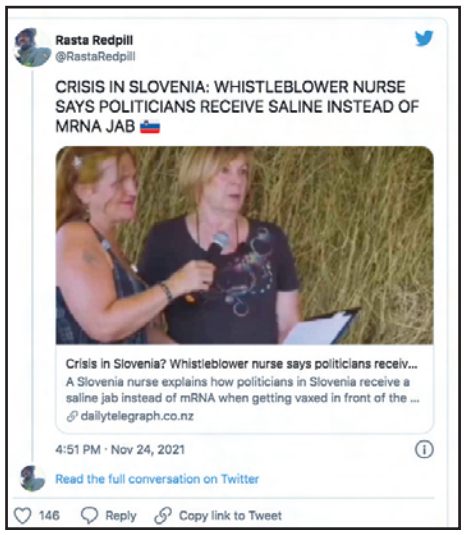
Hal Turner Radio Show reported:

On Saturday 20 November, the Chief Nurse of the University Medical Center, Ljubljana Clinical Center, (pictured above, who deals with the administration of vaccine vials and manages everything, quit her job, went in front of TV cameras and took out vaccine bottles.

She showed the gathered journalists the codes on the bottles, each with the final number 1, 2, or 3 in the code, and then explained the meaning of these numbers:

As you'll notice in the above Facebook clip, the press conference took place in July.

It was not the recent date of November 20th.



While the reported date is incorrect, the press conference itself is legitimate.

And Slovenians are furious at their government.

I'm attempting to reach out to others from Slovenia to gather more details about the situation.

If I have further updates, I'll provide an additional report.

While these whistleblower claims remain unverified right now, the media is desperately trying to bury this story.

And in the case they're verified as accurate, I imagine a vitriolic response from the public.

One Nation Under God

Fetal cells and bioengineered humanity

continued from page 1

point finally take on the objections straight-up by staunchly defending the use of aborted baby bodies for medical research.

Bottom line: The coronavirus vaccines come from abortion, and those who created the vaccines firmly believe in harvesting dead babies for medical research purposes. Tactics to defend the horror: Decree it to be indispensable, shift the focus of the debate, and then, operating from that false sight-line, morally justify it.

National Geographic Nov. 19 article: Headline and subhead:

Here are the facts about fetal cell lines and COVID-19 vaccines

As more people apply for religious exemptions to vaccine mandates, experts explain how and why fetal cells are used in drug development, from vaccines to common pain medications.

The article begins by quoting a top-shelf ruling establishment health official. Johns Hopkins has been at the very center of the coronavirus hype on a global level since the beginning. Outside of Bill Gates himself, it's hard to find an entity more deeply embedded inside the COVID machine. Johns Hopkins health official: Cell lines from murdered babies are essential:

"So many people don't realize how important fetal cell lines are to develop life-saving medicines and vaccines that they rely on every day," says Amesh Adalja, an infectious disease expert at Johns Hopkins Center for Health Security. "Their use in developing COVID-19 vaccines isn't anything different or special."

From there, we are led to a classic dodge: "people don't know what they are objecting to." It is crucial to note that the technocratic class that wants to instill this Brave New Human Order upon the world resorted to these exact same tactics with the Senomyx scandal circa 2011.

Do you remember? There was in fact nothing complicated about the Senomyx saga, although it was presented as deeply confusing at the time. It simply involved using the same moral justifications of harvesting murdered babies for research purposes to support bioengineered food rather than vaccines.

Big-brand dominant media outlets were harnessed to conduct "fact-checks" ruling it "FALSE" that fetal tissue was in bottles of Pepsi cola when that was never the heart of the controversy. Very tellingly, these totally misleading fact checks continued to be rolled out as the coronavirus pandemic hype was about to be unleashed in 2019 and as the mass vaccination campaign gathered steam in 2021.

The whole story all along was that fetal cell lines were indeed being used to develop a taste enhancer that was to be purchased by major commercial food companies, and that Pepsi was working with this company at the time it was developing this flavor enhancer. This is objectionable in and of itself. Robustly declaring there are no chunks of dead babies in your Pepsi was meant to cloud the waters to avoid focus on the fully reasonable objection to harvesting the cell lines of a murdered baby for taste-receptor tests meant to deceive the human tongue when a mass commercial food product was being consumed. We are seeing this same misdirection being applied once again today with the jab.

Back to the National Geographic piece:

But doctors worry that some people's objections may stem in part from misunderstandings of the science. Richard Zimmerman, a family medicine specialist at the University of Pittsburgh School of Medicine and a part-time physician at Pittsburgh's East Liberty Family Health Care Center, says that some of his patients have voiced skepticism because they believe the COVID-19 vaccines contain cells from aborted fetuses. This is incorrect.

Again: This is a tactic being deployed to minimize the evil actually being performed. From there, it is a short skip and hop to justifying the killing. The technocrats brag about the bounty of rich material that comes from JUST ONE murdered baby: Just one!

[Cell biologist Leonard] Hayflick, for instance, has frozen ten million human fetal lung cells — derived from one aborted fetus — in each of 700 glass vials after the original cell population had doubled seven times. Given their potential to continue doubling at least another 30 times, each vial can yield "tens of thousands of kilos of cells," he says. "That's enough cells to supply the world's vaccine manufacturers with WI-38 cells for several years." These lung cells are currently used to produce vaccines for varicella, rubella, hepatitis A, and rabies. Other scientists have transformed fetal kidney and retinal cells so that they become immortal, dividing forever. The PER.C6 cell line, for instance, is derived from immortalized retinal cells from an 18-week-old fetus aborted in 1985.

What's the big deal? One baby was murdered in 1985, and look at all the goodies we got out of it. As National Geographic makes clear, all three U.S. vaccines are tainted by this grotesque morality. They want those who have received the jab to know what they have acquiesced to:

Johnson & Johnson uses PER.C6 to produce its COVID-19 vaccine. The company used these cells to grow adenoviruses — modified so that they wouldn't replicate or cause disease — that were then purified and used to deliver the genetic code for SARS-CoV-2's signature spike protein. The J&J vaccine does not contain any of the fetal cells that once housed the adenovirus because they were extracted and filtered out.

Pfizer and Moderna used another immortal cell line, HEK-293, derived from the kidney of a fetus aborted in the 1970s. The cells were used during development to confirm that the genetic instructions for making the SARS-CoV-2 spike protein worked in human cells. This was like a proof-of-concept test, Speidel says, and the fetal cells were not used to produce either of these mRNA vaccines.

The conclusion to the article makes it even more plain, again championing the indefensible:

"The issue is whether one believes that it is ethically acceptable to develop and use life-saving medicines, vaccines, and treatments that are dependent on a cell line that was created using aborted human fetal cells a half century ago," says Frank Graham, a molecular virology and medicine expert and emeritus professor at Canada's McMaster University, who created the HEK-293 cell line.

Even if future vaccines can somehow avoid the use of these fetal cell lines, it's hard to ignore their foundational role.

What this all leads to is a utilitarian idea of humanity that robs individuals of their God-given rights, starting with the right to life. This in turn justifies the harsh restrictions on personal freedoms in the name of the "common good" – not spreading the virus. Utilitarianism once again. Your freedom cannot be allowed if it can possibly harm someone in potentially any way.

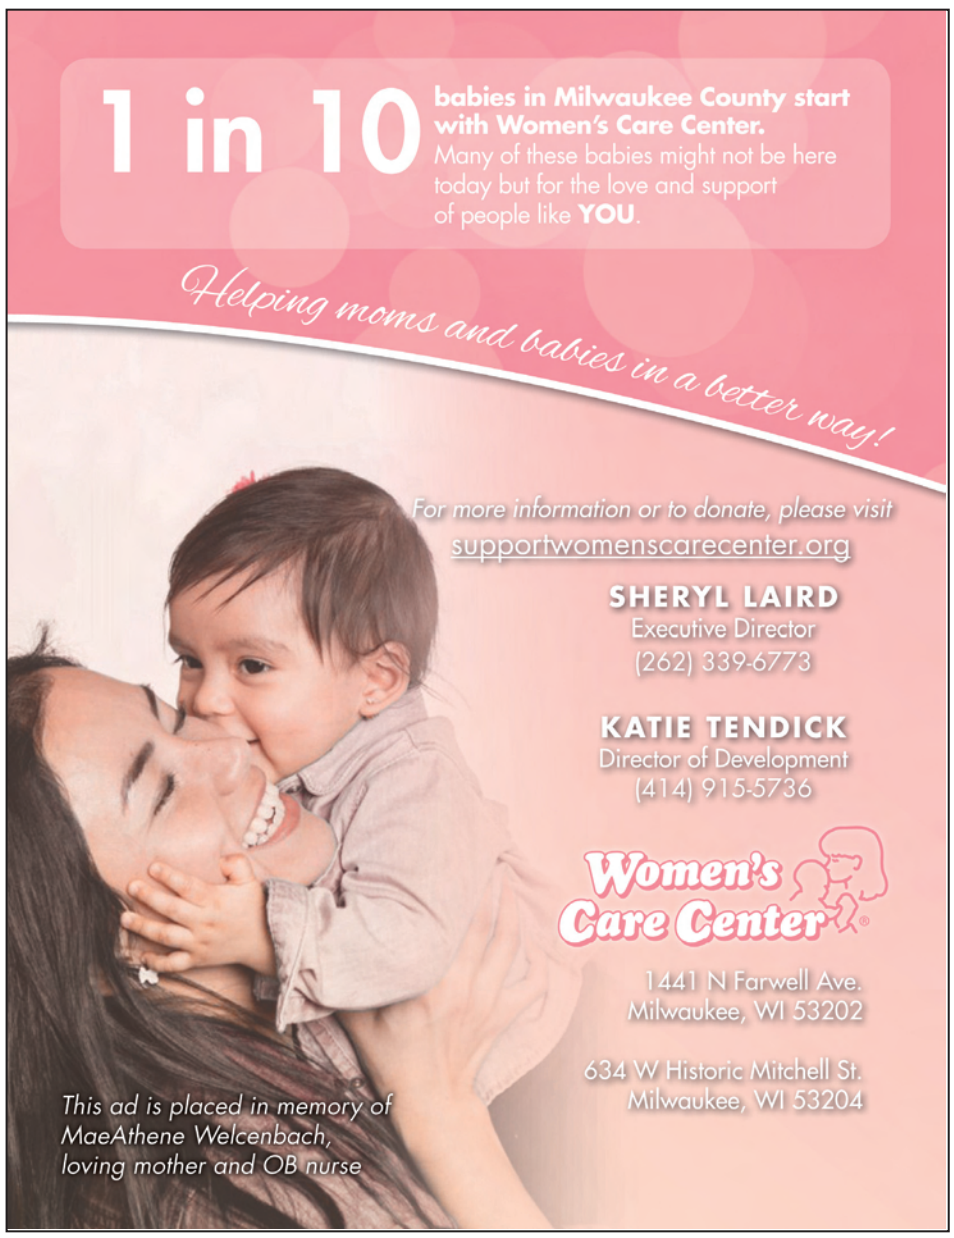
The endgame of all this is we become cattle. Fascinatingly, all this could be seen in the Senomyx controversy over a decade ago. It was even written at the time. From an extremely interesting 2012 Forbes article written by a person who is all for harvesting fetal material for tastier food and vaccines:

There's a huge public health upside to what Senomyx is doing. They are developing flavors that mimic sugar, salt, and also savory tastes. I'm a guy who doesn't drink soda because of the health risk involved. But replacing ingredients that can lead to obesity, high blood pressure, heart disease, and cancer strikes me as a useful endeavor. The creation of a medicine like Pulmozyme for cystic fibrosis, which the Children of God For Life says also used HEK cells, seems even more worthwhile. So do the vaccines from Merck and GlaxoSmithKline that the group also opposes.

I don't think many people in science or in the drug business would think of using HEK cells as "using aborted fetuses." To a very large extent, the HEK 293 line is being caught up in the embryonic stem cell politics of a decade later. But I can see how people who think fetal tissue should never be used in any medicine would see a problem here. I can also understand how a lot of biotechnology can seem a little scary and Frankenstein-like, because it emphasizes how malleable and manipulable our basic parts are. The fact that we can so manipulate biology challenges our view of ourselves as spiritual beings in control of our own destinies.

This is what is really going down right now. It is nothing short of an attempt by technocrats of the same mindset as 2021 Humanist of the Year Dr. Anthony Fauci to overthrow God's natural order and "improve" on His creation. Your food will be transformed. Your genes will be transformed. YOU will be transformed.

And they do not want us to have the right to object to it.



VOICE OF JERUSALEM

Israel's Post-Trump Strategic Challenge

By Caroline Glick

A report this week about the discussions Israel and the U.S. are now holding regarding the Iranian nuclear program was nothing short of an earthquake. Tuesday, Israel Hayom ran a red headline on its front page: "Frustration in Jerusalem: U.S. Passive Against Iran." The story, by military correspondent Yoav Limor told us two deeply alarming things about the state of American-Israeli coordination on Iran's nuclear program. First, the Americans are not working with Israel to block Iran from becoming a nuclear power. They are working against Israel.

The Americans and Israelis agree that Iran is on the verge of becoming a nuclear breakout state, which can assemble nuclear weapons at will. But whereas they agree on the status of Iran's quest for military nuclear capability, they disagree about what the response to the current state of Iran's nuclear program should be. Israel's position is that the U.S. should take diplomatic and economic action, and at a minimum threaten military action if Iran refuses to reinstate the limitations on its nuclear activities set out in the so-called Joint Comprehensive Plan of Action, or JCPOA, from 2015. The 2015 nuclear deal permitted Iran to enrich limited quantities of uranium to 3.67 percent enrichment. Iran is currently enriching massive quantities of uranium to 60 percent enrichment – just a step away from weapons grade.

President Joe Biden and his advisors are unwilling to consider placing additional economic sanctions on Iran. Indeed, the administration is turning a blind eye to Iran's export of massive quantities of oil and gas to China and other states, in breach of the sanctions.

Military action, the Americans told their Israeli interlocutors, isn't off the table.

The Americans say they may be willing to consider taking diplomatic action of some form or another. But in exchange, they demand Israeli concessions to the Palestinians.

In short, Limor's article reported that the U.S. has made clear to Israel that it will take no effective action to block Iran from becoming a nuclear power.

The second stunning bit of information in Limor's article is that the Lapid-Bennett government has no idea what to do in the face of America's position. Instead of accepting reality and moving to face Iran without the U.S., Israel's government is opting to cling ever tighter to Washington.

Limor wrote, "The Israeli effort is to reach maximum coordination with the U.S. stems, among other things from the fact that Israel has been left with very few options for action."

To maintain coordination with the administration which does not share Israel's goals, the Lapid-Bennett government has changed Israel's goals. It now supports the Biden administration's efforts to return the U.S. to the JCPOA. In 2018, then President Donald Trump abandoned the deal because Iran negotiated the deal in bad faith and was systematically breaching the JCPOA's limitations on its nuclear operations.

During his premiership, Benjamin Netanyahu opposed all aspects of the JCPOA because Netanyahu recognized that it facilitates and provides UN legitimacy for Iran's nuclear weapons program. The Lapid-Bennett government justifies its radical break with the past by arguing that an Iranian return to the JCPOA's limitations on its nuclear activities will slow its advance to the bomb, and buy Israel time which it "can use to wage a diplomatic campaign and to speed up its military preparations to keep Iran from a nuclear bomb in the future."

In other words, to buy time in its effort to block Iran from acquiring nuclear weapons, Israel is legitimizing the JCPOA which legitimizes and guarantees the success of Iran's efforts to develop a nuclear arsenal. The government argues that after legitimizing Iran's nuclear program (by supporting the JCPOA), it will have the time to wage a diplomatic campaign to delegitimize Iran's nuclear program, and to develop a military capacity to attack Iran's nuclear installations which the JCPOA legitimizes.

Israel's operational and strategic incoherence stem from the government's inability to reconcile itself to the fact of U.S. betrayal. By abandoning the U.S.'s longstanding opposition to Iran's nuclear program, the Biden administration hasn't simply dashed Israel's hope of coordinating its efforts with Washington. It has obliterated the guiding wisdom at the foundation of Israel's 50 year security partnership with America. That wisdom has it that America's security partnership with Israel is the most important guarantee of Israel's national security.

The notion that the U.S. – rather than Israel's power and willingness bring its power to bear – is Israel's most important strategic asset was born in the aftermath of the 1968-1970 War of Attrition. It became the foundation for Israeli strategic planning in the wake of the 1973 Yom Kippur War. During that period, in exchange for U.S. weapons, Israel agreed to abide by U.S. demands that Israel stand down and not defeat its enemies. In response to U.S. pressure, Israel did not destroy the Egyptian Third Army when IDF forces encircled it at the end of the Yom Kippur War.

The U.S. saved the PLO and Yassir Arafat in Beirut in 1982.

It saved Arafat and the PLO again in Ramallah in 2002.

Washington saved Hezbollah in 2006.

It saved Hamas in multiple battles since 2008.

The U.S. torpedoed Israel's anti-Iran collaboration with Georgia in 2007-8. It subverted Israel's strategic cooperation with Azerbaijan against Iran in subsequent years.

In each episode, Israel's security establishment accepted Washington's stand down orders because the generals valued U.S. arms more than decisive victory.

In the case of Iran and its nuclear program, this approach is the reason Israel lacks the military capacity to significantly downgrade Iran's nuclear capabilities. Despite overwhelming evidence that Iran's nuclear program is directed against Israel first and foremost and that the U.S. has never intended to take military action to block Iran's path to the bomb, Israel's generals have long insisted that Iran's nuclear program is an "international problem," not Israel's problem. Israel, they have consistently argued, must allow the U.S. to lead international efforts to block Iran's race to the bomb.

This position was most vividly and fatefully followed in 2010 when the then Mossad Director Meir Dagan, and then IDF Chief of General Staff Gabi Ashkenazi refused an order by then Prime Minister Benjamin Netanyahu and then Defense Minister Ehud Barak to prepare the army and the Mossad to attack Iran's nuclear installations. Not only did the top commanders refuse the order, in an interview shortly before his death, Dagan revealed that he informed his American counterpart, CIA Director Leon Panetta about the order he and Ashkenazy rejected.

Throughout Barack Obama's years in the White House, Israel's security establishment refused to face the obvious implications of his nuclear diplomacy. Instead, Dagan and his successor Tamir Pardo, Ashkenazy and his successor Benny Gantz all insisted that Israel had to toe Obama's line. The generals opposed Netanyahu's diplomatic efforts against the JCPOA.

Today, the security establishment blames Netanyahu for Iran's sprint to the nuclear finish line. The generals say Netanyahu was wrong to convince Trump to leave the nuclear deal. To be sure, Iran is now enriching more uranium to higher levels of enrichment than it did when it agreed to the JCPOA in 2015. But according to those involved in the proceedings, in 2015 Iran lacked the ability to enrich uranium to 60 percent enrichment.

During the course of the JCPOA, Iran developed advanced centrifuges to enrich uranium to bomb grade or near bomb grade levels. The idea that the ayatollahs wouldn't be doing what they are doing now if the U.S. hadn't left the deal strains credulity. And with the U.S. out of the deal, the chances of blocking Iran's path to the bomb were far greater than they had been beforehand.

The truth is that Netanyahu wouldn't have been as dependent on Trump, and Israel's prospects for blocking Iran's nuclear advances would not be in disarray today, were it not for the security establishment's refusal to develop strategic options for blocking the Iranian regime's path to a nuclear arsenal independent of Washington. Israel would not be where it is today if Dagan and Ashkenazy had followed Netanyahu and Barak's order in 2010.

Last year, the security brass erupted after Trump announced the U.S. would sell F-35 combat jets to the UAE. Defense Minister Benny Gantz and his colleagues argued the sale would erode Israel's qualitative military edge over its neighbors. Netanyahu for his part countered that the UAE doesn't threaten Israel and that the strategic advantage Israel gains from peace with the Arab states of the Persian Gulf far outweighs the dangers emanating from the F-35 sale to the UAE.

In the wake of this dispute, Washington-based Middle East expert and former senior Bush administration official Dr. David Wurmser published a cost-benefit analysis of U.S. military support for Israel. Titled, "Reflections on the U.S. Guarantee of a Qualitative Military Edge to Israel," Wurmser's article provoked a classified discussion in the Knesset's Foreign Affairs and Defense Committee last year.

Wurmser argued that the price Israel has paid for U.S. weapons transfers has been exorbitant. Israel, he wrote, "bartered its strategic freedom of maneuver and initiative in exchange for a qualitative military edge in weaponry."

Israel's dependence on U.S. weapons created a vicious cycle. With each passing year, "Israel depended ever more on cutting edge American arms, relied ever more on U.S. aid to pay for it, which demanded ever more of Israel to subordinate its strategic initiative, maneuver and planning to American regional policies.

"This progression, in turn," Wurmser explained, would leave Israel's will questioned, deterrence weakened and compromised – all of which invited a greater threat which demanded yet more weaponry."

Invariably, Wurmser noted, "those policies entailed further Israeli restraint and acquiescence to America's attempts to downplay its closeness to Israel in order to court key Arab nations, and ultimately to pursue peace processes which exacted concessions from Israel in an attempt to reconcile the two sides of this 'balancing' act. The strategic dependence of Israel on the US always guaranteed that Israel's security establishment would support such restraint and conciliation."

If the F-35 sale to the UAE caused Israel's security establishment to worry about the future of Israel's qualitative edge, the Biden administration's betrayal of Israel in relation to Iran utterly devastates the basic conceptual framework at the heart of the security establishment's strategic thinking. Israel's military relationship with the U.S. is now demonstrably not preferable to strategic independence and freedom.

It is hard to know what will happen with the JCPOA. Maybe Iran will agree to abide by it in exchange for sanctions relief. Maybe it won't. Maybe it will slow down its uranium enrichment. Maybe it won't. But the notion that a deal that paves Iran's path to a nuclear arsenal is the proper means to stem Iran's nuclear advance is absurd.

It is also far from clear what the impact of "U.S. diplomatic pressure," (if it is ever employed), will have on Iran. Between its catastrophic defeat in Afghanistan and its weak defense of Taiwan in the face of Chinese threats, America's threats carry far less weight than they once did.

What is absolutely apparent however, is that Israel's security establishment needs to wake up from its American delusion. America, under the Biden administration, does not have Israel's back. Only Israel has Israel's back.

weaponizes natural tornadoes *continued from page 1*

That's all Biden knows? Well the chart from NOAA shows he knows next to nothing: **[See Figure 1]**

(reminder from the apostle Paul…" Those who know what they know don't yet know what they ought to know). Apparently there is a spiritual lesson here since if its all he knows, doesnt know what he ought to know, like the chart above

They are not increasing and for good reason, Warming more in the north than in the south as has been occurring limits tornadoes because it distorts the clash zone and spreads it out, it is no secret that this occurred as a strong cold trough pushed into the midsection of the nation, There was a big snowstorm to the north, and like other second season tornado outbreaks (example Shreveport Dec 3, 1978) we see the classic plains trough configuration. But if there was no cold air, no outbreak. In the spring 2 things can limit tornado outbreaks, Too much cold air all the way to the gulf coast so the temperature contrast in May, the big tornado month does not show up, That happened this year, Or too little cold air, very warm all over the place like 2012

Let us look at a signature tornado season, spring 2011 (btw I am concerned we see that next spring) **[See Figure 2]**

Major tornado season there is the cold for the clash. What happens when too much warmth too far north. A down season like 2012 **[See Figure 3]**

There is no question in my mind the very warm gulf played a role in this, I even said so on our Saturday summary on Weatherbell.com But if not for the strong trough (we see it all the time with these second season outbreaks) there is no big event But what happened all tornado season long this year? Is Joe Biden even aware what a down season it was. Why would you jump in and say that given the year was so far down? **[See Figure 4]**

Way below average, in fact under the 25th percentile even with this disaster

How about wind reports Way below average **[See Figure 5]**

Hail is at record lows!! **[See Figure 6]**

yet what does he waste no time doing? And why doesn't the media call him on this? That is what is so amazing to me. His advisors know the media will not question such a comment, which is plainly weaponizing an event that is leading to untold misery and suffering (like we need anymore or that) and they let him say it,

Let's remember I am the guy that called President Trump out on his Dorian nonsense. It was right here

https://www.cfact.org/2019/09/07/33857/

And you wait. The cold we are worried about this winter is now being seen by more sources than me, If that hits, my forecast is for more weaponized comments based on either a lack of knowledge or arrogance that you can simply say stuff like this and get away with it.

God only knows the extent of other things that are said that can plainly be challenged but are not (actually many of us suspect)
