"The essential quality of a market system, contrary to popular thinking, is not that it promotes greed; But rather, that it renders greed harmless." Israel Kirzner

Tulsi Gabbard Calls Out "Police State" Actions by Democrat Party, Urges Americans to Stand Up Against Them

By Rushmore Daily

Hawaii Democrat Congresswoman and now Democrat party whistleblower, Tulsi Gabbard, is sounding the alarm against her own party as it continues to tighten the screws on the American people with censorship and surveillance.

Appearing on Tucker Carlson Tonight on Fox News, Gabbard made it clear that she took an oath to defend the Constitution of the United States and as such, must now stand up and speak out against what her own party is doing to the people.

"The very first thing that any President does after they've gotten elected, any member of Congress and every one of us who has served in the military is we take an oath, and we swear to support and defend the Constitution of the United States against all enemies, foreign and domestic," said Gabbard.

"The reason that this is the first thing that we do is because our Constitution is the foundation of this country and who we are," she continued. "It is what guarantees us our civil liberties, our freedoms that are endowed to us, not by any man or person in government, but are endowed to us by our Creator, and so this is something that we must all unite around."

"This is something that we recognize that those who stormed the Capitol on January 6 trying to stop Congress from fulfilling their constitutional

Suspect science threatens US farming – again

Environmentalists falsely claim weed-prevention chemical threatens 1,800 threatened species

By Paul Driessen

Modern American agriculture has wrought miracles over the past 70 years. Conventional farm production per acre and overall nearly tripled, corn (maize) production increased 500% from 20% less land – and farmers used less water, less fuel, less fertilizer, and fewer pesticides and other chemicals for every bushel of food they harvested. They did all this using hybrid and genetically engineered seeds, tractors guided by GPS, equipment that can space seeds precisely to the inch and apply chemicals in amounts suited to soil characteristics that can change every few feet, and numerous other high-tech advances.

By using weed control chemicals, they avoid having to till and break up the soil, thereby protecting soil organisms, conserving soil moisture, sequestering carbon, saving time and tractor fuel, allowing more land to be conserved as wildlife habitat instead of being planted in crops, and dramatically reducing erosion,.

It's thus surprising and

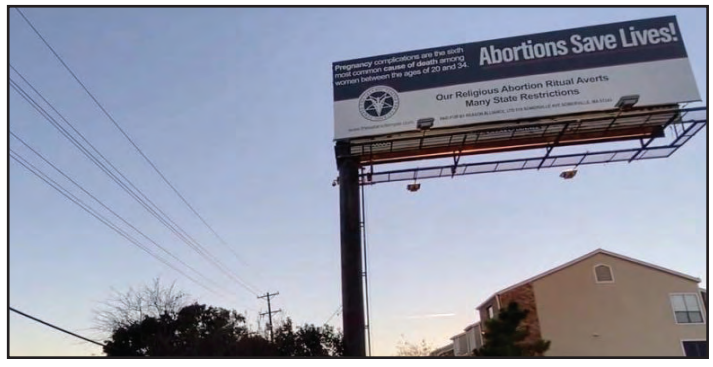
Satanist group commissions 40 foot 'Abortion Saves Lives' billboard in Texas

According to Lucien Greaves of the Satanic Temple to the two similar billboards have been erected in the Houston and Miami areas



Just weeks into 2021, and abortion is front and center in American politics once again, with more than a dozen pro-life laws surfacing at state legislatures, Biden's executive orders, and the balance of power tilting once again towards the blood-bloated feticide monopoly Planned Parenthood. And speak of the Devil, the Satanic Temple is at it again as well, this time in Texas.

I've followed the pro-abortion efforts of the Satanic Temple in the space for a couple of years. Last August, they

Section 230 Unconstitutional Delegation of Power to Big Tech

By William L. Kovacs

In the frenzied days after Democrats won control of Congress, the presidency, and rioters invaded the Capitol, Big Tech, relying on section 230 of the Communications Decency Act, for immunity from civil suit, launched a surprise attack on web content they deemed objectionable. Twitter permanently banned President Trump's account, wiping out his contact with 88 million followers and banned thousands of conservative social media accounts. Google and Apple blocked Parler's App from their stores and Amazon Web Services ("AWS") denied Parler access to its cloud network.

Scientist Confesses: "Global Warming a $22 Billion Scam"

By Newsmax.com

Imagine, for a moment, sitting at a prestigious steakhouse in Palm Beach, Florida, a hot spot for some of the most wealthy and famous — Donald Trump, Tiger Woods, Oprah Winfrey, James Patterson, Rush Limbaugh, and hundreds more.

And, imagine dining with a handful of men you've only read about. Some of them are worth millions, others published best-selling books, and some have held prominent positions at the White House.

In essence, you're sitting at a five-person table of VIPs.

You're about to take a bite of your New York strip when one of the men, a top U.S. intelligence

Explosive If True: "I'm a Clinical Lab Scientist, C19 Is Fake, Wake up America"

By Derek Knauss

What we found was that all of the 1500 samples were mostly Influenza A and some were influenza B, but not a single case of Covid, and we did not use the B.S. PCR test. We then sent the remainder of the samples to Stanford, Cornell, and a few of the University of California labs and they found the same results as we did, NO COVID. They found influenza A and B. All of us then spoke to the CDC and asked for viable samples of COVID, which CDC said they could not provide as they did not have any samples. We have now come to the firm conclusion through all our research and lab work, that the COVID 19 was imaginary and fictitious.

Will a Biden Reality Czar Preside Over George Orwell's Ministry of Truth?

Steve's Say . . .

The Great Awakening is Upon Us

By Steve Welcenbach

Over the years I must confess to being somewhat reserved in putting forth information which I believed to be true but felt too many readers may find too shocking. Today that ends.

Our world I've come to learn looks nothing like what I've been taught or told it looks like. Things I just accepted as true have been demonstrated to me with incontrovertible evidence not to be so. Unless you've used the Bible as your immovable guide you're entire life, you've been deceived on at least one level, and probably many.

History, the gold of knowledge, only yields its most precious secrets through intense digging. You must mine deeply to reach the truth nuggets buried in the mountain of lies and deceit required to keep them hidden from the casual explorer. And, strangely, many of the most crucial signposts to the truth are hidden in plain sight.

All people in America and around the world are about to be confronted with some devastatingly difficult truths that must be acknowledged if we are to thwart this final push to implement the Satanic plan of the One World Order. The evil of the slavery plantation they intend to force upon our world most cannot even conceive of in their wildest imaginations.

Unfortunately this legacy of evil comes out of the depths of our past, from the legacy of Cain, the earliest days of Israel, from the courts of the medieval monarchs right into what happens above and underground in London, Rome and Washington DC. In fact, all across the Earth.

Paul's letter to the Romans 12:19 states, "Do not take revenge, my friends, but leave room for God's wrath, for it is written, 'It is mine to avenge; I will repay,' says the Lord." Later in chapter 13 Paul writes, " He [governmental authority] is God's servant, an agent of wrath to bring punishment on the wrongdoer."

Fortunately for mankind, the Lord God is merciful beyond conception and always keeps His promises. God founded America for His purposes and under His direct guidance as George Washington documented for us. He will not abandon the God-fearing people of America to the Satanic One World Order Cult. In fact, many arrests have been made in America and across the world of these cult members, with many more forthcoming. We will be hearing about them all very soon.

Soon a new monetary system will be implemented, if not as I write, which will destroy the bankster stranglehold the Rothchild et al cabal held upon humanity. The US corporation, unconstitutionally created in 1871 which sold all US citizens into lifetime debt slavery, Trump bankrupted and dissolved early last year, with enormous implications. We are in for some kind of a ride in the next few weeks and months.

And as I've stated all along, Biden would never be President, and he's not now. Yes, Donald Trump did step down from power. Yes, they did have a mock inauguration. The MSM pretends Biden's in the Whitehouse when he's on a set in California, if that's even him. The military ceded no useful power to him. The report delivered January 19th (a month late on purpose by the bad guys) regarding foreign election interference contains so many irrefutable facts and data sets confirming Donald Trump's landslide victory that the

military must act to extricate the fraudster and all his minions. Their obligation to the Constitution and American people will be brought forth very soon.

And finally some very important housekeeping comments. The Main Stream Media (MSM) contains no truth whatsoever, whether from a local or national source. Trump rightly dubbed them fake news and the enemy of the people. Besides being some of the stupidest and catty

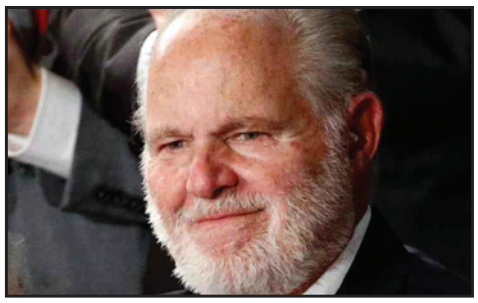
Rush Limbaugh: The Legacy of an Modern Day American Patriot

By Steve Welcenbach

Yesterday brought sadness to all who love America, its founding and its history, warts and all. Rush Limbaugh, America's Anchorman, Truth Detector and Doctor of Democracy, talent on loan from God, succumbed to his lung cancer yesterday morning after just over a year of intense battle. All who loved him and prayed for him and his family daily felt the dread of this day prowling about with each show we listened to, all the



while wondering how his shoes could be filled once it came upon us. We're all about to find out, if its even possible.

I contend Rush to be God's chosen John the Baptist for America's gift of President Donald J. Trump. Rush immediately recognized the viability and brilliance of a Trump presidency. His advocacy for him, while not MSM blatant, certainly seemed direct for those who attended his daily class on conservatism. He showed us all how it made sense, not just for America but for all of us individually. And boy was he right, as we all know, 99.8% of the time.

Due to the timing of Rush's passing on to his Savior on the 17th, I will not be able to do a proper send off this edition. But in March we will certainly expound greatly on the contributions and legacy of this giant American Patriot.

Our Vision

We aspire to a world in which people, made in the image of God, reconciled to Him by Jesus Christ, and reflecting God's own creativity, work together to enhance the fruitfulness, beauty, and safety of the Earth, enabling more and more of our neighbors to enjoy good health, long life, freedom, justice, and spiritual and material abundance, for the glory of God and the good of our fellow man, thus fulfilling the two Great Commandments to love God and love our neighbor.

Our Mission

We seek to magnify the glory of God in creation, the wisdom of His truth in environmental stewardship, the kindness of His mercy in lifting the needy out of poverty, and the wonders of His grace in the gospel of Jesus Christ.

Our Identity

A coalition of theologians, pastors, ministry leaders, scientists, economists, policy experts, and committed laymen, the Cornwall Alliance is an evangelical voice promoting environmental stewardship and economic development built on Biblical principles.

Schedule a Speaker

Dr. Beisner and many Fellows, Adjuncts, and Contributing Writers are available to speak for churches, seminaries, universities and colleges, schools, and other groups. To schedule a speaker, email Calvin@CornwallAlliance.org.

Healthy Polar Bears and Thriving Tigers: The Common Climate Tale

By Vijay Jayaraj and E. Calvin Beisner

Last year, the world applauded Greta Thunberg's emotional "How Dare You!" speech at the UN summit in New York. The teenager famously said, "Entire ecosystems are collapsing. We are in the beginning of a mass extinction."

The mainstream media's narrative is similar. Ecosystems are dying. Animals are going extinct. Our evil desire to consume fossil fuels is to blame!

What do you think? Are species going extinct because of manmade global warming? Christians, who honor God as Creator, should care about these matters. But caring by itself isn't enough. We also need truth, for there is a way that seems right, though its end brings death (Proverbs 14:12).

Take two key species as examples. Polar bears have been climate alarmists' mascots for years. Tigers are an important species in South Asian jungles.

Tigers: No Longer Crouching

To the dismay of climate doomsayers, tiger populations are on the rise!

Tigers are a keystone species. The integrity of their ecosystems is crucial to their welfare. Thriving tiger populations are evidence of healthy ecosystems.

So, what do you suppose is up with tigers?

India's tiger numbers have doubled since 2006. That's despite the country's ever-expanding cities, industries, and mines. India counted 2967 tigers in its latest census. That is more than double the number in 2006.

Celebrating International Tiger Day, Indian Environment Minister Prakash Javadekar noted that "the country today has 70 percent of the world's tiger population."

Two-thirds of these tigers live in forest zones categorized as tiger reserves. The remaining third is a testament to the safe habitations outside highly protected zones.

Recent surveys affirm the healthy state of Indian forests on which tigers depend. Total forest and tree cover in India increased by 5,188 square km from 2017 to 2019. I witnessed the health of these ecosystems as a field ecologist in the buffer zones of a tiger reserve in the heart of India.

The primary concern of tiger conservationists in India is unlawful encroachment, not climate change. Climate change in the past decade has impacted tiger populations positively.

Tropical forest ecosystems in India are not dying. They remain healthy and are expanding. Tiger numbers benefit.

Polar Bear Population Growth: Unmasked

Polar bears are the mainstream media's climate doomsday mascot. They used a widely projected image of a starving polar bear to generate sympathy in 2019.

The image first appeared in a video viewed by an estimated 2.5 billion people. It got the most views of any video ever on the National Geographic website.

Scientists accused National Geographic of "being loose with the facts." Videographer Cristina Mittermeier admitted that there was no evidence that the bear's condition was due to climate change.

"Perhaps we made a mistake in not telling the full story," she said, "—that we were looking for a picture that foretold the future and that we didn't know what had happened to this particular polar bear."

People get sick, grow weak, and die. So do polar bears.

Still, climate alarmists use polar bears to win public empathy. But if you think polar bear populations are declining, you've been misled.

Global polar bear numbers have risen spectacularly in the last sixty years. From around 5,000 in the 1950s, they rose to 8,000–10,000 in the 1970s, 20,000–25,000 by 2005, and an estimated 22,000–31,000 by 2015.

You might think environmentalists would cheer. Think again. They and the mainstream media have remained largely silent.

The polar bear problem in the Nunavut province of Canada is a testament to their growing population. Recently the Nunavut people pressured the Canadian government to allow increased culling. Why? Because their growing numbers threatened Nunavut communities.

In a 2018 report, leading polar bear biologist Susan Crockford wrote:

The people of Nunavut are not seeing starving, desperate bears—quite the opposite. Yet polar bear specialists are saying these bears are causing problems because they don't have enough sea ice to feed properly. The facts on the ground make their claims look silly, including the abundance of fat bears. Residents are pushing their government for a management policy that makes protection of human life the priority.

It's a Myth—Don't Fall for It

Polar bears and tigers are many thousands of miles apart. But they share the same common myth: that climate change is destroying their habitats, and their numbers are dwindling. In reality, their habitats are improving, and their numbers are rising.

It is easy for celebrity climate activists to make sensational claims about species extinction and ecosystem collapse. The mainstream media project their speeches as authoritative. Instead, they are merely activist scare stories.

The Heartland INSTITUTE
Ideas that empower people

The Heartland Institute is a national nonprofit research and education organization devoted to discovering, developing, and promoting free-market solutions to social and economic problems.

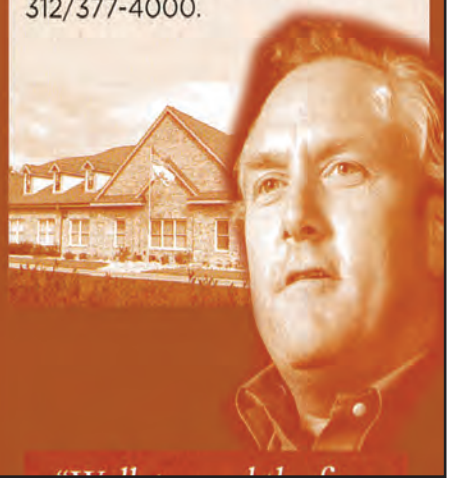
ANDREW BREITBART FREEDOM CENTER AT THE HEARTLAND INSTITUTE

On March 1, 2016, on the fourth anniversary of his death, The Heartland Institute dedicated the public meeting space in its new home in Arlington Heights in honor of Andrew Breitbart.

The Andrew Breitbart Freedom Center is a state-of-the-art meeting facility with seating for 75. Events are scheduled to take place every week in the space, featuring authors of new books, freedom activists and thinkers, and civic and business leaders.

"Andrew Breitbart was a genuine American hero," said Joseph Bast, president of The Heartland Institute, in a video announcing the dedication. "He inspired millions of people to stand up and speak the truth about what is happening in America. We could not be more pleased to have his name forever affixed to The Heartland Institute. We are honored that his family and friends believe this is a suitable addition to his legacy."

For more information about the Andrew Breitbart Freedom Center, please contact Nikki Comerford at ncomerford@heartland.org or 312/377-4000.



Betty Bast's funeral arrangements

To Friends, from Joseph L. Bast

My mom, Betty, passed away Thursday night at 9:15 p.m. She was 89. Cause of death was Alzheimer's, advanced already in 2019 and made much, much worse by the unconstitutional and medically unnecessary Wuhan virus lockdowns.

Mom was a wonderful person, the sweetest and happiest and hardest-working person you've ever met. Retiring early so I could spend more time with her was probably the best decision of my life. If any of you are in a similar situation, I can't recommend it strongly enough. The elderly and infirm are truly at the mercy of those around them, and their vulnerability gives the rest of us a chance to show unconditional love, fulfill our duties to parents and family, to find enjoyment in seemingly mundane daily activities (like making puzzles), and to learn patience and compassion.

An obituary posted by Wichmann Funeral Home is here: *https://wichmannfuneralhomes.com/obituary/betty-m-bast/*

Betty M. Bast

Betty Mae Bast, age 89, passed away on February 4, 2021 surrounded by the caring and compassionate staff of St. Paul Elder Services, Kaukauna. She was born May 26, 1931, to the late John and Martha (Coonen) Van Asten. She graduated from St. John High School in Little Chute in 1949.

116-year-old nun survives COVID and says she 'wasn't scared to die'

On Thursday, Sister André will celebrate her 117th birthday with a special Mass for her intention, a slap-up dinner that includes port wine, foie gras, capon with porcini mushrooms and baked Alaska, and a video meeting with her many great-nephews and great-nieces.

The oldest European alive -- born in 1904 in Alès, in the south of France – would have been in the "feel-good" section of news shows on the national media no matter what, particularly because she's coherent and expresses herself wittily and well. But this birthday is a special one: Sister André just recovered from COVID-19.

Even more surprisingly as far as the secular media are concerned, she was not scared in the least by the Wuhan virus. She told BFM, a national TV station, that she was "not afraid of dying."

"No, I wasn't scared because I wasn't scared to die ... I'm happy to be with you, but I would wish to be somewhere else – join my big brother and my grandfather and my grandmother," she told the journalist from BFM.

In a few words, she put COVID-19 into perspective: Yes, it's an illness that can hit the elderly in a very serious way, but there is a life after this life and their true hope and port of arrival is in eternity. Her serenity was underscored by videos buzzing on social media that show her, hands folded, in prayer, whether she is outside in the garden of her rest home for the dependent elderly, enjoying the clement weather in Toulon on the Mediterranean coast, or inside, where she is obviously the favorite inhabitant.

Sister André told another journalist that during her confinement she "prayed for the young people and remained patient." "That's her big message: patience," added David Tavella, spokesman for the Saint Catherine Labouré "EHPAD" (Hospital home for the dependent elderly).

But Sister André interrupted and said, "To be honest, patience has its limits; it's not fun being alone in your room."

She still prays for the young that they may have *Continued on page 9*

Coronavirus Scandal Breaking in Merkel's Germany. False Positives and the Drosten PCR Test

By F. William Engdahl

The widely-praised German model of the Angela Merkel regime to deal with the COVID-19 pandemic is now engulfed in a series of potentially devastating scandals going to the very heart of the testing and medical advice being used to declare draconian economic shutdowns and next, de facto mandatory vaccinations. The scandals involve a professor at the heart of Merkel's corona advisory group. The implications go far beyond German borders to the very WHO itself and their global recommendations.

The entire case for WHO-mandated emergency lockdown of businesses, schools, churches and other social arenas worldwide is based on a test introduced, amazingly early on, in the Wuhan, China coronavirus saga.

On January 23, 2020, in the scientific journal Eurosurveillance, of the EU Center for Disease Prevention and Control, Dr. Christian Drosten, along with several colleagues from the Berlin Virology Institute at Charite Hospital, along with the head of a small Berlin biotech company, TIB Molbiol Syntheselabor GmbH, published a study claiming to have developed the first effective test for detecting whether someone is infected with the novel coronavirus identified first only days before in Wuhan. The Drosten article was titled, "Detection of 2019 novel coronavirus (2019-nCoV) by real-time RT-PCR" (Eurosurveillance 25(8) 2020).

The news was greeted with immediate endorsement by the corrupt Director General of WHO, Tedros Adhanom, the first non-medical doctor to head WHO. Since then the Drosten-backed test for the virus, called a real-time or RT-PCR test, has spread via WHO worldwide, as the most used test protocol to determine if a person might have COVID-19, the illness.

On November 27 a highly-respected group of 23 international virologists, microbiologists and related scientists published a call for Eurosurveillance to retract the January 23, 2020 Drosten article. Their careful analysis of the original piece is damning. Theirs is a genuine "peer review."

They accuse Drosten and cohorts of "fatal" scientific incompetence and flaws in promoting their test.

To begin with, as the critical scientists reveal, the paper that *Continued on page 5*

American Medical Association Approves Hydroxychloroquine

By Edward Morgan

We warned this would happen and now it has. All year the liberal media has attacked Trump's handling of the coronavirus, especially his endorsement of hydroxycloroquine as an effective treatment.

Now that Democrats believe the election is all over, their disgusting hypocrisy is reaching new heights!

The American Medical Association has amended their recommendations regarding Hydroxychloroquine, reversing their previous warning that a drug in common use for seven decades was somehow now dangerous. This comes after the 2020 election, of course. If they admitted the truth about HCQ before the election, it would have benefitted President Trump who has been recommending it for months.

The AMA is an organization of political hacks. Those in charge of the recommendation made a decision to disregard clear science showing the efficacy of HCQ as a treatment, prompting most news organizations and Big Tech companies to suppress calls for its widespread use. Real doctors had their opinions quashed. Those who discussed how HCQ could benefit us were often suspended or banned from their platforms. And worst of all, people likely died because the AMA wanted to help get their guy into the White House. According to Len Bilén:

The American Medical Association (AMA), in a surprising move, has officially rescinded a previous statement against the use of Hydroxychloroquine (HCQ) in the treatment of COVID-19 patients, giving physicians the okay to return to utilizing the medication at their discretion.

Previously, the AMA had issued a statement in March that was highly critical of HCQ in regards to its use as a proposed treatment by some physicians in the early stages of COVID-19. In addition to discouraging doctors from ordering the medication in bulk for "off-label" use – HCQ is typically *Continued on page 8*

Alfie Oaks - Covid Report

Alfie Oaks owns several food/grocery establishments through out Naples. Just last year he opened up a multi million dollar store called Seed To Table, which took over 5 years to build. He also owns several thousands acres of farm land in central Collier County along with packaging and processing plants. Alfie has several thousand employees from the farm land to retail stores. He has always been one to speak his mind.

Below is his article that was published on the internet.

Most everyone of us at Seed to Table have never worn a mask.

Many people from the beginning of this political pandemic called me reckless and irresponsible. But let's look at the facts. Over 2300 employees and hardly anyone has even have the slightest bit of illness. Over the past four months the few members in our company that had the slightest symptoms went to a local doctor that I will not name to protect the use of hydroxychloroquine and vitamins. Every single employee that we sent over was better within two days.

The sad truth is the World health organization and CDC could have pulled off the same scam every year for the last 200 years. Knowing that every co-morbidity has now been chalked up to Covid from the very beginning it is clear to see why the numbers that are in excess of the normal flu season.

The facts clearly show that LESS people have died during the first seven months of 2020 than during the same period in 2018 and 2019.

I completely understand why the masses have been conditioned by the media and are so eager to buy into the fear. Sometimes the LIE is so big that you would almost be a fool not to buy into it!

THE TIME HAS COME FOR THOSE STILL ASLEEP TO WAKE UP, BECAUSE THIS SHAM/DRESS REHEARSAL WILL CERTAINLY BE THE LAST CHANCE; THOSE CHOOSING TO REMAIN IN DENIAL, GIVING THE FINGER TO REALITY ARE GOING TO MAKE ALL OF US PAY THE PRICE ...

FEEL "FREE" TO FACT CHECK EACH OF THESE, PLEASE!

"CDC admitted they screwed up COVID19 infection counts and intentionally misled the public and have apologized, clarifying that the amount of people truly infected is much lower than what was originally reported -- an error so egregious it made the director of the Harvard Global Health Institute say "how could the CDC make this mistake? This is a mess."

The American Coronavirus Task Force also admitted to fudging the National COVID19 death count when Dr. Birx said the deaths are people who died "with" COVID19 not "from" COVID19, thus making the real death count much lower than what is currently being reported.

Dr. Anthony Fauci admitted masks won't help against the virus and mask manufacturers are now including warnings that their products do not deter COVID19.

Fauci also said that continuing to close the country could cause irreparable damage.

CDC backtracked their initial claim that led governors to shutdown their states & clarified that COVID19 does not spread easily on surfaces.

Governor of New York Andrew Cuomo confirmed a recent health study showing that 70% of new infections actually originate at home, thus making stay at home orders one of the most dangerous mandates currently in place.

Trump stopped funding the WHO and threatened to cut off money permanently until they can prove they are no longer corruptly influenced by communist China after they lied to our country about human to human transmission of COVID19 in January.

The curve is flattened, the CDC, WHO, Dr. Fauci, our governors, and many more were completely wrong about the potential threat of this virus.

If you are still living in fear, Don't be. The media, global organizations, the government, and its agencies "mislead" the public.

People called those of us who knew this all along conspiracy theorists, but it turns out we were just following the facts!

Open up your businesses, churches, and homes. Don't fall for the lies any longer. If you fell for the lies this time, wake up and join the army of truth seekers fighting on the front lines.

Florida has just admitted to miscalculations on some that received positive COVID-19 results but never got tested and many others have been incorrectly identified as positive in the state's system.

WHO have just admitted that transmission of the virus from an asymptomatic carriers - the whole reason for the lockdown, is rare!! ie you could not spread it before showing any symptoms!!

The CDC just confirmed a .4 to .26% death-rate for Covid 19. The death rate for the flu shot is .6. Twice as high as Covid!

For that, we have:

- Added nearly 6 trillion to national debt
- Laid-off or furloughed 50 million workers
- Placed 60 million on food stamps
- Gone from 3.5%to 14.7% unemployment
- Crippled the petroleum industry
- Ruined the tourism industry
- Bankrupted the service industry
- Caused an impending meat and protein crisis
- Threatened, fined, and arrested church leaders
- Exacerbated mental health problems
- Shut down schools and colleges
- Given unbridled power to unelected officials
- Increased suicides higher than COVID deaths
- Delayed surgeries and treatments for profound illnesses
- Infringed upon countless important civil liberties
- Placed 300 million Americans on house arrest

Bill Gates has placed himself in such a position of influence by heavily funding all corners to make this lie happen.

We need to start treating it as the lie it is.

Seriously our whole way of life is at stake, and they have plans to make it much worse now introducing it as "the grand reset", "the beginning of the 4th revolution" (ie a surveillance state of control, where everyone lives in what is essentially a strict open air prison where you are tracked, nothing is private, and everything is decided for you, and you have no rights whatsoever, and there can be no resistance.

Welcome to their "new world order".

Death toll total US this year is #20 of 20 years including CV-19

The US total deaths as % of population is # 20 this year of last 20 years with the highest total Population. We are getting older and healthier on average. Stay healthy to function as we get older.

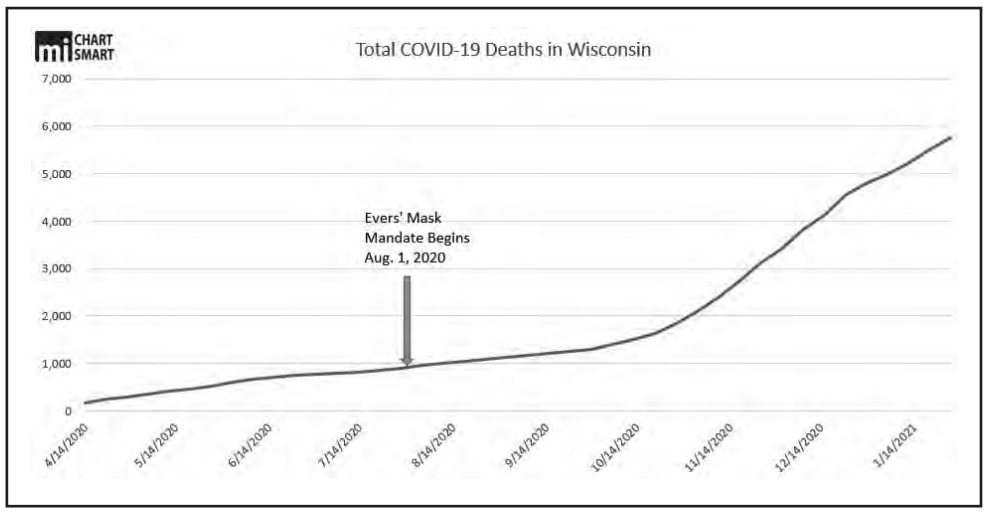
MacIver Institute – Masks Don't Work



False Positives

continued from page 4

established the Drosten PCR test for the Wuhan strain of coronavirus that has subsequently been adopted with indecent haste by the Merkel government along with WHO for worldwide use–resulting in severe lockdowns globally and an economic and social catastrophe–was never peer-reviewed before its publication by Eurosurveillance journal. The critics point out that,

"the Corman-Drosten paper was submitted to Eurosurveillance on January 21st 2020 and accepted for publication on January 22nd 2020. On January 23rd 2020 the paper was online."

Incredibly, the Drosten test protocol, which he had already sent to WHO in Geneva on 17 January, was officially recommended by WHO as the worldwide test to determine presence of Wuhan coronavirus, even before the paper had been published.

As the critical authors point out, for a subject so complex and important to world health and security, a serious 24-hour "peer review" from at least two experts in the field is not possible. The critics point out that Drosten and his co-author Dr. Chantal Reusken, did not disclose a glaring conflict of interest. Both were also members of the editorial board of Eurosurveillance. Further, as reported by BBC and Google Statistics, on January 21 there were a world total of 6 deaths being attributed to the Wuhan virus. They ask, "Why did the authors assume a challenge for public health laboratories while there was no substantial evidence at that time to indicate that the outbreak was more widespread than initially thought?" Another co-author of the Drosten paper that gave a cover of apparent scientific credibility to the Drosten PCR procedure was head of the company who developed the test being marketed today, with the blessing of WHO, in the hundreds of millions, Olfert Landt, of Tib-Molbiol in Berlin, but Landt did not disclose that pertinent fact in the Drosten paper either.

Certainly nothing suspicious or improper here, or? It would be relevant to know if Drosten, the Merkel chief scientific advisor for COVID-19, Germany's de facto "Tony Fauci," gets a percentage for each test sold by Tib-Molbiol in their global marketing agreement with Roche.

SCIENCE & ENVIRONMENTAL POLICY PROJECT

The Week That Was February 13, 2021

Quote of the Week:

"The great enemy of truth is very often not the lie--deliberate, contrived and dishonest--but the myth--persistent, persuasive and unrealistic. Too often we hold fast to the cliches of our forebears. We subject all facts to a prefabricated set of interpretations. We enjoy the comfort of opinion without the discomfort of thought.– John F. Kennedy, June 11, 1962

****

Number of the Week: – 20%

****

THIS WEEK:

By Ken Haapala, President Science & Environmental Policy Project (SEPP)

Transparency and Integrity? The January 9 TWTW discussed the efforts of outgoing EPA Administrator Andrew Wheeler to create rules internal to the EPA on transparency regarding data used in dose-response studies. These rules state that the EPA will give priority to studies in which the public can review the data used in making new regulations. They are a step forward in making significant data publicly available. These rules do not apply to past studies or regulations where the EPA used highly questionable linear-no threshold models as the basis for regulations. These models can lead to absurd results. For example, people can die from drinking too much water at one time, therefore drinking a glass of pure water can be deadly to some people.

One of the fundamental principles of the scientific method is free and open testing of a concept or hypothesis against physical evidence to understand its strengths and weaknesses. The new rules are based on the principle that the public has a right to know why the EPA is establishing certain regulations. Unfortunately, all too frequently those who object to open evidence to support their desired regulation often have something to hide from those who suffer the burden of regulation.

On January 27, the Biden administration announced a "Memorandum on Restoring Trust in Government Through Scientific Integrity and Evidence-Based Policymaking." This extends to all executive departments and federal agencies, including the EPA. The Memorandum opens:

"It is the policy of my Administration to make evidence-based decisions guided by the best available science and data. Scientific and technological information, data, and evidence are central to the development and iterative improvement of sound policies, and to the delivery of equitable programs, across every area of government. Scientific findings should never be distorted or influenced by political considerations. When scientific or technological information is considered in policy decisions, it should be subjected to well-established scientific processes, including peer review where feasible and appropriate, with appropriate protections for privacy. Improper political interference in the work of Federal scientists or other scientists who support the work of the Federal Government and in the communication of scientific facts undermines the welfare of the Nation, contributes to systemic inequities and injustices, and violates the trust that the public places in government to best serve its collective interests."

This sounds ideal. The public will finally have federal government rule making based on transparency and the best evidence-based decision making possible. The memorandum assigns specific tasks to the Director of the Office of Science and Technology Policy, including convening a task force on scientific integrity.

However, there is a matter of concern. The second paragraph of the memorandum states:

"This memorandum reaffirms and builds on the Presidential Memorandum of March 9, 2009 (Scientific Integrity), and the Director of the Office of Science and Technology Policy's Memorandum of December 17, 2010 (Scientific Integrity)."

The EPA Endangerment Finding was announced on December 7, 2009, after the March 9, 2009, memorandum on scientific integrity. Will it be subject to review under the new memorandum on Scientific Integrity and Evidence-Based Policymaking?

EPA Endangerment Finding: The EPA website on the Endangerment Finding states:

"On December 7, 2009, the Administrator signed two distinct findings regarding greenhouse gases under section 202(a) of the Clean Air Act:

"Endangerment Finding: The Administrator finds that the current and projected concentrations of the six key well-mixed greenhouse gases—carbon dioxide (CO2), methane (CH4), nitrous oxide (N2O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF6)—in the atmosphere threaten the public health and welfare of current and future generations.

"Cause or Contribute Finding: The Administrator finds that the combined emissions of these well-mixed greenhouse gases from new motor vehicles and new motor vehicle engines contribute to the greenhouse gas pollution which threatens public health and welfare."

The finding does not apply to water vapor, the dominant greenhouse gas. Yet, the influential 1979 Charney Report speculated that an amplification from increased water vapor makes the modest warming from carbon dioxide significant. This amplification has not been found in over 40 years of observations of the atmosphere by satellites.

Also, there is little evidence that the current surface warming is primarily caused by greenhouse gases. The atmosphere is not warming as much as the surface data indicates a warming. Thus, the difference is coming from sources other than increasing greenhouse gases.

Further, the direct studies of atmospheric radiative transfer, how the greenhouse effect operates, produce a far lower warming effect than the Charney Report, and the reports of the UN Intergovernmental Panel on Climate Change (IPCC) claim to be occurring from greenhouse gases.

EPA's claims that CO2 threaten the public health and welfare of future generations are misplaced. As John Christy and others have shown, using atmospheric temperature datasets from satellites and weather balloons, and reanalysis datasets, the global climate models fail to describe what is occurring in the atmosphere. Thus, the models are highly speculative and unsuitable for predicting what may occur in the future.

If the Biden Administration desires to establish scientific integrity, it should reopen examination of the EPA Endangerment Finding. We shall see how the Biden Administration treats scientific integrity not from its memoranda, but by its actions.

Myths: John Kennedy's admonishment against myths in the Quote of the Week needs to be constantly remembered. Myths concerning harms to human health are pervasive. Another example was widely touted this week – that fossil fuels caused the deaths of more than 8 million people worldwide in 2018 from their inhalation of fine particles (PM2.5). The claims that PM2.5 causes extensive deaths is based on secret science that no one is permitted to review. In addition, the statistics are highly dubious.

Worse, the recent studies lump all fossil fuel use together – coal, oil, and natural gas. Yet, the emissions and wastes from burning each type of fuel are significantly different. In the open air, natural gas is far cleaner burning than coal.

Further, the studies do not recognize the significant strides made in cleaning the exhausts of coal fired power plants over the past 50 years. Instead, they dwell on China or other nations that require few pollution controls on their power plants, and which use open-air burning of coal, or other fuels, for heating and cooking. Even before the demise of the steel industry in Pittsburgh, the city was no longer choking on the dirty air produced by coal. It is not the fuel going into the furnace that is important, it is the cleanliness of the exhaust going into the sky.

Based on these reports, it is surprising anyone in China survives beyond the age of 20.

Phase Change: Much of Europe and the US are experiencing cloudy, cold, wet weather, without significant daily fluctuation between maximum and minimum temperatures. In part, we can be thankful for water vapor and its greenhouse effect. Without it, nighttime would be extremely cold, freezing and killing all vegetation, even in the summer. Humanity would not exist.

Writing in his Blog, The Reference Frame, physicist Lubos Motl brings up another stabilizing characteristic of water, which is the energy required to cause its phase change, including the energy required phase change. The energy required to convert ice to liquid water and liquid water to water vapor. To melt ice, 334,000 J/kg are needed, to convert liquid water to water vapor 2,260,000 J/kg are needed. Put differently

"The melting latent heat [of this phase change] is equivalent to the warming of liquid water by some 80 °C; the vaporization specific heat is equivalent to the warming of liquid water by some impressive 540 °C. … it's clear that the rate at which the temperature wants to change in the wake of some radiation deficits or surpluses is affected near the phase transitions. But which way?

Put differently, to melt a kilogram of ice requires the same energy as to raise a kilogram of water 80 °C or 80 kilograms 1 °C. But to convert one kilogram of liquid water into water vapor requires the same amount of energy as to raise one kilogram of water 540 °C, which is impossible without intense pressure, or to raise 540 kilograms of water by 1 °C. Roughly, the conversion of liquid water to water vapor requires 6.75 times the energy as converting ice to liquid water. The reverse releases heat (latent heat).

"Well, first, the required phase transition slows down or ideally stops the temperature change completely. When the temperature drops from positive numbers towards the freezing point, it stops there because the water needs to freeze over and to do so, it needs to lose as much internal energy as if you cooled liquid water by 80 °C, as I previously said. In this process, the temperature is stuck at 0 °C and what is changing is the fraction of the water that has frozen over."

Motl discusses problems with temperature averages because they do not consider the heat involved in phase transitions and what appears in the Vostok ice cores. We are fortunate to be living in a warm period between glaciations. It is significant cold that is much more dangerous than warmth.

Number of the Week: – 20%. Again, TWTW finds it stunning that scientific reports are claiming that almost 20% of deaths world-wide are from using fossil fuels.

The Science & Environmental Policy Project began in late 1990 as a research effort by atmospheric physicist S. Fred Singer and a handful of graduate students working out of a small office in downtownWashington, D.C.The Project had two goals: (1) to gather material for a book on global environmental issues,and (2) to conduct a survey of scientists affiliated with the UN Intergovernmental Panel on Climate Change to determine the extent of what was, even then, being touted as scientific "consensus" on global warming.

What the graduate students discovered with their survey convinced Dr. Singer to set his book aside and instead to circulate among senior members of the American Meteorological Society a "Statement by Atmospheric Scientists" on greenhouse warming, which was quickly endorsed by 46 leading climatologists and atmospheric physicists (and eventually by nearly 100). That statement, issued on February 27, 1992, drew widespread media attention and was cited more than 150 times in the press. It was the first inkling journalists had that there was no scientific consensus on the reality of a global warming. Indeed, there was raging debate.

The Science & Environmental Policy Project was incorporated in the state of Virginia in 1992, and established as a nonprofit, 501(c)3 educational organization in late 1993.Today, having expanded from that core of 46 scientists, it draws on an international network of some of the finest minds in science who donate their time to promoting sound, credible, peer-reviewed research as the only basis for the health and environmental policies that affect us all.

You can help in two ways:

1. Download SEPP reports, press releases, and articles and pass them on – to newspaper editors, journalists, educators, civic leaders, and others. Help stop the fearmongering and the distortion of science.This is the most important thing you can do.

2. Support SEPP with your tax-deductible contributions. The environmental pressure groups, which present so much wrong information, have a combined clout of more than $1 billion a year.The Science & Environmental Policy Project has had far-reaching impact on less than one-hundredth of one percent of that figure. It's money well and effectively spent.

Send your contributions to:

CFACT
Prospering Lives. Promoting Progress. Protecting the Earth.

The guy who wants to "break your will" over climate

By Craig Rucker

Massachusetts Undersecretary for Climate Change David Ismay candidly admitted that government officials plan to "break your will" to force you to change the way you heat your home and travel.

"So let me say that again, 60% of our emissions that need to be reduced come from you, the person across the street, the senior on fixed income, right … there is no bad guy left, at least in Massachusetts to point the finger at, to turn the screws on, and you know, to break their will, so they stop emitting. That's you. We have to break your will. Right, I can't even say that publicly."

Ismay made the statement during a video conference with Vermont "Climate Council" members. Massachusetts Governor Charlie Baker tried to control the damage, saying, "First of all, no one who works in our administration should ever say or think anything like that — ever," the governor said. "Secondly, Secretary Theoharides is going to have a conversation with him about that."

Paul Diego Craney of the Massachusetts Fiscal Alliance, which posted the video, told the Boston Herald that the clip provides a "sneak peek into the minds of regulators." It is "frightening to think an official so high up in the Baker administration is bragging to an out-of-state group about the economic pain he wants to inflict on the very people whom he's supposed to work for."

Eight Massachusetts legislators, seven Republicans and one Democrat, wrote to Governor Baker demanding he fire Ismay immediately.

The arrogance of the climate elite continues to astound. They view us as powerless, ignorant peasants who need to be told what's good for us. Just last week we were discussing the outrageous statement by Biden's climate czar John Kerry, that private jets are the "only choice for somebody like me."

Massachusetts appears to be vying with California to produce the most arrogant, out-of-touch, scientifically and economically foolish climate officials.

Massachusetts climate official resigns after admitting plans to "break your will"

By Craig Rucker

Massachusetts Undersecretary for Climate David Ismay has resigned over his outrageous admission that climate regulators intend to "break your will" to change the way you use energy.

What to do with a heavy-handed, out-of-work climate bureaucrat? He seems a perfect fit for the Biden, California, or UN climate regimes.

Read Ismay's full letter of resignation at CFACT.org (or begin reading after this article).

Ismay's letter contains another stunningly candid admission when he states his "sincere concern that overly aggressive emissions targets may have unintended and harmful consequences on those we most need to protect."

Ismay's outrageous statement and subsequent resignation call attention to the massively destructive policy mistakes Massachusetts is poised to make in the name of climate.

Legislators passed a bill mandating the Bay State cut emissions "at least" 50% below 1990 levels by 2030. That's merely ten years. Achieving this unrealistic goal would require radical steps that will cost Massachusetts billions, yet accomplish nothing meaningful for the environment. Governor Charlie Baker vetoed the bill and wants the reductions to total 45% to 50% by 2030 and 65% to 75% by 2040 instead. Baker believes the legislature's plan will add $8 billion to the billions in costs he is already willing to incur.

Think about that. There appear to be only two possible outcomes. Either the Massachusetts legislature will amend its bill to reflect Governor Baker's radically destructive emissions cuts, or override his veto and make things worse.

A major sticking point is building codes. Plans to force new construction to achieve "net zero" emissions mean fantastic expenses and designs that cut people off from natural ventilation and connection to the outdoors in the name of efficiency.

This is terrible news for Massachusetts and the nation.

Buildings that are miserable to live and work in, coasts and mountains suffused with wind turbines, meadows transformed into solar deserts, crippling taxes, and high costs of living cause people and business to flee to states with greater freedom and better standards of living.

Climate activists then demand their follies be mandated nationwide to ensure you have no escape.

Hence their desire to "break your will."

"Break your will" Climate guy resigns

Dear Secretary Theoharides,

It is with great regret that I submit my resignation, effectively immediately, from the position of Undersecretary for Climate Change in the Executive Office of Energy and Environmental Affairs.

As Undersecretary for Climate Change, I have worked diligently to ensure the health and welfare of

Continued on page 8

Suspect science threatens

cont. from page 1

troubling that environmentalist groups continue to attack the foundations of that success – especially GMO seeds and safe, effective, repeatedly tested, constantly monitored chemicals like glyphosate (Roundup) and neonicotinoid pesticides.

Another long-term target is atrazine, used to prevent the growth of broadleaf and grassy weeds among corn, sorghum, soybeans and sugarcane, on golf courses and lawns, and along highways. It is the second most widely used herbicide, after glyphosate, and controls glyphosate-resistant weeds. Over a dozen government studies since it was first introduced in 1958 have concluded it is safe for humans, animals and the environment.

The Center for Biological Diversity and other groups opposed to synthetic chemicals nevertheless sued the Environmental Protection Agency, claiming endangered species had not been properly considered during the pesticide review process. The courts gave EPA limited time to analyze possible effects on listed species and determine whether there is "moderate" or "strong" evidence that species and habitats on the Fish & Wildlife Service (FWS) "threatened or endangered" list (as well as candidates for listing) will likely be killed or otherwise adversely affected by commonly used herbicides and insecticides.

Once EPA finishes its "biological evaluation" of each chemical, it will pass the baton to the FWS for more in-depth, but still insufficient analyses of effects on each species – also under tight court deadlines.

Faced with a court-ordered deadline and lacking the data, funding and personnel for adequate evaluations of each listed species, EPA resorted to satellite imagery, statewide crop and atrazine use data, computer models, algorithms, extrapolations and best guesses – plus available toxicity studies of rats, hamsters, other lab animals, and plants tested for the pre-emergent weed control chemical's effectiveness. Data were not available (or were not used) at the county level, and certainly not at the farm or habitat level.

It produced a document claiming 1,013 species and 328 endangered or threatened habitats are "likely to be adversely affected" by somehow encountering atrazine, if it is inadvertently sprayed on them, small amounts "drift" into their habitats, or animals wander into a sprayed yard, farmer's field or golf course.

These numbers represent most of the endangered or threatened species and critical habitats in the continental United States. The numbers would have been higher, except that, as EPA notes, atrazine manufacturers "committed to limit use of atrazine products" to the continental USA.

Ultimately, the agencies must decide whether to let current rules stand – or restrict or ban atrazine nationwide, regionally, or near some or all of the species' habitats and occasional stomping grounds.

EPA's list includes 36 amphibians, 207 aquatic invertebrates, 190 fish, 47 reptiles, 108 birds, 99 mammals, 160 insects and invertebrates, and 948 plants. At least 8 of the species are already extinct, and dozens more live in mountains, deserts and other areas that will likely never be touched by atrazine.

It's a commendable effort – maybe the best possible under the circumstances. It's just not good enough, not for decisions with such monumental, far-reaching implications for America's agriculture, especially since these evaluations are likely to be grounds for many more lawsuits against other vital chemicals.

Agency findings are presented in complex equations, over 100 pages of explanations of data and methodologies, and mind-numbing, almost incomprehensible spreadsheets that can involve over 1,800 rows and 30 columns. They'll probably impress citizens and courts, politicians and journalists with the expertise, precision and detail they supposedly reflect. But in reality, in the end, it's mostly GIGO: multiple uncertainties in, multiple black box analyses conducted, multiple faulty conclusions out.

The EPA analysis begins with species whose actual populations and presence in specific parts of possible ranges and habitats are mostly unknown. It then utilizes statewide crop planting and atrazine use data, averaged out and applied to possible habitats and individual plants or animals – which as individuals or a species may react very differently to different amounts of atrazine, and may contact them as direct or drifting spray, diluted promptly or over weeks in soil or water, ingested or contacting the skin.

Other unknown factors include number of sprays per year; by hand, tractor or aircraft; wind speed and direction and ambient temperature at time of spraying; distance to habitat or individual plant or critter; amounts actually making contact over time; and whether an individual or species reacts to some unknown amount of atrazine the same way a very different laboratory animal did, with lethal or sublethal effects.

Even assuming a wildly optimistic 90% confidence level for each of these 12-15 or more unknowns, calculating the ultimate "strongest" evidence of harmful impacts requires multiplying the 90% (0.9) confidence for each element – thus 0.9 x 0.9 twelve or more times. The best possible scenario ends up being a ridiculously low 28% or less confidence that the agency's ultimate findings are valid.

That is useless and unacceptable. Decisions affecting our farms, produce and dinner tables must not be made so cavalierly, on the basis of such patently insufficient evidence and rank guesswork.

But suppose they do ban atrazine. What guarantees will we have that this will prolong the existence of species that are already marginal and threatened by countless other human and natural factors? None.

And what next for conventional farmers? There is no substitute for atrazine or other modern herbicides, which are more effective, less toxic and more biodegradable than their predecessors. In their absence, corn yields would decline nearly 40% – and growers would have to control weeds by hand (by thousands of migrant workers and their children?) and by regularly tilling their fields. Food prices would soar.

Tilling means tractor mileage and fuel would skyrocket, crops would need far more water and irrigation, soils would lose their integrity and many organisms, carbon sequestration would plummet, and millions of tons of farmland would erode annually. Millions more acres would have to be planted to get today's corn and other yields – and much of that acreage would come from land that is now wildlife habitat.

It's the "precautionary principle" at its very worst: always focusing on alleged, highly speculative risks of using chemicals – never on the risks of not using them; always highlighting risks a technology allegedly might cause, but ignoring often far greater risks it would reduce or prevent.

Finally, if environmentalists, courts and regulators truly are concerned about chemical threats to these and other species, they would not look only at conventional, synthetic chemicals – but at organic chemicals.

Atrazine has an LD50 of 3090 for rats, meaning it takes 3,090 milligrams per kilogram of body weight to kill half of a test group of rats that ingest it orally. Copper sulfate used on thousands of organic farms is ten times more toxic: an LD50 of 300. It is deadly to fish, hugely harmful to avian reproductive systems and highly toxic to humans. The LD50 for rotenone is 132; a little bit will kill every fish in your favorite woodland pond. Pyrethrin (LD50: 200-2600 mg/kg) and neem oil (LD50: 3540) positively slaughter bees! Yet they (and many more such nasties) are approved for organic farming all over the US, EU and world.

When will environmentalists sue to have dangerous organic pesticides banned? When will courts and federal agencies initiate studies of their effects on EPA's list of 1,795 threatened and endangered species?

It's time we all focused on how and where atrazine is actually used – and whether any endangered species would actually be exposed to it (and harmed by it) under conditions of actual use. If you want your voice heard, submit your comments to docket number EPA-HQ-OPP-2020-0514 by February 19.

Paul Driessen is senior policy advisor for the Committee For A Constructive Tomorrow (www.CFACT.org) and author of books, reports and articles on energy, environmental, climate and human rights issues.

WISCONSIN INSTITUTE FOR LAW & LIBERTY

Spring 2020 School Closures May Result in $7 Billion Lifetime Earnings Loss to Wisconsin Students

The News: A new study from the Wisconsin Institute for Law & Liberty (WILL) estimates that spring 2020 school closures and incomplete curriculums could cost Wisconsin students more than $7 billion in lifetime earnings losses. The study, that only examines curriculum completion during the spring 2020 school closures, provides a stark warning about the potential costs of learning loss due to school building closures in the 2020-21 school year.

The Quote: WILL Research Director, Will Flanders, said, "School closures and the loss of in-person learning have had real costs. Whether it is the cost to lifetime earnings as a result of curriculum loss, or the immense social costs that are impossible to measure, it is critical that policymakers follow the science and prioritize in-person learning to prevent students from falling behind."

Diving Deeper: The Wisconsin Department of Public Instruction (DPI) recently released a report that detailed school district responses to the arrival of the COVID-19 pandemic in the spring of 2020. The report includes key information on the extent to which school districts were able to complete their curriculum during the spring 2020 semester.

Using common methods from education research, WILL Research Director, Will Flanders, author of Dreams Deferred: The Economic Cost of Learning Loss in Wisconsin, estimates the lifelong earnings cost of the incomplete curriculums in spring 2020.

• Schools failed to complete more than 10% of curriculum on average. Averaging across all districts, about 12.5% of curriculum went incomplete during the 2020 spring semester. Larger districts completed marginally less curriculum on average.

• The lifetime cost of spring 2020 school closures tops $7 billion. From just the earliest portion of the pandemic, this report estimates that those in school will lose $7 billion in lifetime earnings as a result of learning lost during the pandemic.

• Curriculum completion varies across districts. Some districts report completing 100% of curriculum, while others report completing as little as 61% of curriculum.

• Districts with more low-income students completed less curriculum. A district with 100% low-income students would be expected to complete 7% less curriculum than a district with no low-income students.

The Takeaway: Policymakers must work to get students back in school for in-person learning. The cost to lifetime earnings of the pandemic just in the spring of 2020 should open the eyes of those who do not see an urgent need to get children back into the classroom. This doesn't even count the numerous unmeasurable social costs accruing as a result of students staying home.

Climate guy resigns

cont. from page 7

residents across Massachusetts in the face of the global climate crisis. Serving the people of Massachusetts as part of the Baker-Polito Administration has been the honor of a lifetime, and I am proud of the equitable climate solutions we achieved together.

I would like to apologize, again, for my comments at last month's Vermont Climate Council meeting. My inability to clearly communicate during that discussion reflected poorly on the Governor, on you, and on our hardworking staff. Although my comments were interpreted by some as placing the burden of climate change on hardworking families and vulnerable populations, my intent was the opposite. In the entirety of my remarks, and as I have elsewhere, I was urging caution in order to minimize such impacts out of a sincere concern that overly aggressive emissions targets may have unintended and harmful consequences on those we most need to protect.

Thank you again for the opportunity to serve you, the Governor, and the people of the Commonwealth.

Sincerely,

David K. Ismay

Hydroxychloroquine

continued from page 4

used to treat diseases such as malaria – they also claimed that there was no proof that it was effective in treating COVID, and that its use could be harmful in some instances.

However, on page 18 of a recent AMA memo, issued on October 30, (resolution 509, page 3) the organization officially reversed its stance on HCQ, stating that its potential for good currently may supersede the threat of any potentially harmful side effects.

So, there we have it. HCQ could not be approved before the election, because President Trump had recommended it. Meanwhile, with an 8o +% reduced risk of having to be admitted to the hospital if administered with Azithromycine and Zinc as soon as testing positive or symptoms occurred, many (70000+) lives could have been saved.

Many in conservative media have been touting HCQ based on the word of actual doctors and scientists who attest to its usefulness as both a treatment and even as a preventative measure. President Trump took the drug as part for prevention and was reported on by many in the media as causing harm. Fox News host Neil Cavuto went so far as to say based on the President's recommendations, "people will literally die."

At NOQ Report, we've had our stories about COVID-19 and HCQ censored by Big Tech on multiple occasions. We've had articles and videos removed from Facebook and YouTube. And we're not alone. According to The Gateway Pundit:

For months The Gateway Pundit has been reporting factually on the evidence and studies that proved Hydroxychloroquine was effecting in the treatment of COVID-19. Of course, we were hounded by the left and attacked by fake "fact-checkers" labeling our reports as disputed.

Despite its effectiveness the American Medical Association (AMA) back in March, at the height of the pandemic in the US criticized hydroxychloroquine and its use. Dr. Fauci led the jihad against this effective drug.

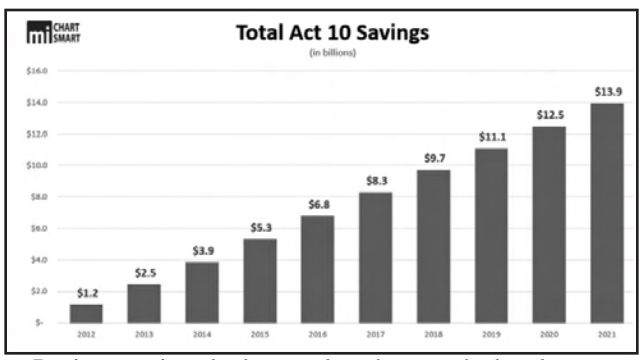
Mainstream media and Big Tech warned for months that listening to President Trump and taking HCQ would harm this nation. As it turns out, they were the ones causing harm, and many Americans likely died as a result.

Act 10 at 10: Total Taxpayer Savings Hits $13.9 Billion

By MacIverNews

Ten years ago, Wisconsin was in a dire financial situation.

Wisconsin had a $156 million budget deficit, and the upcoming 2011-2013 budget was starting off $3.6 billion in the hole. That didn't include $1.5 billion the state owed to the federal government for an unemployment benefits loan.



During previous budget cycles, the state had stolen money from segregated accounts like the transportation fund and the patients' compensation fund to plug holes in other areas. It raised taxes and fees. It got a one-time wind fall from the federal stimulus act. All of those were temporary – and sometimes illegal – solutions.

"The reality is that we have to get this current budget, the soon to be forthcoming budget, and budgets for decades to come in line," Gov. Scott Walker said on Feb. 11, 2011. "We can no longer kick the can to the future."

Walker's plan was called the "Budget Repair Bill," which eventually became Act 10. It addressed the root of Wisconsin's budget problem – unchecked labor costs.

It limited collective bargaining for public sector unions to just base salary and wages. Those unions needed to be recertified every year by at least 51% of represented employees. It ended dues check off, which automatically deducted union dues from government pay checks.

Public employees would be required to pay for 12.6% of their health insurance premiums, and pay for half of the contributions made to their pension funds.

Act 10 didn't just fix the state's financial problems. It also gave local governments and school districts the tools they needed to keep their budgets balanced. Previously, most school districts were required to buy health insurance through the state teachers union. After Act 10, they were allowed to shop for the best deal.

Act 10 has now been in place for ten years, and it continues to save the state and local governments hundreds of millions of dollars every year.

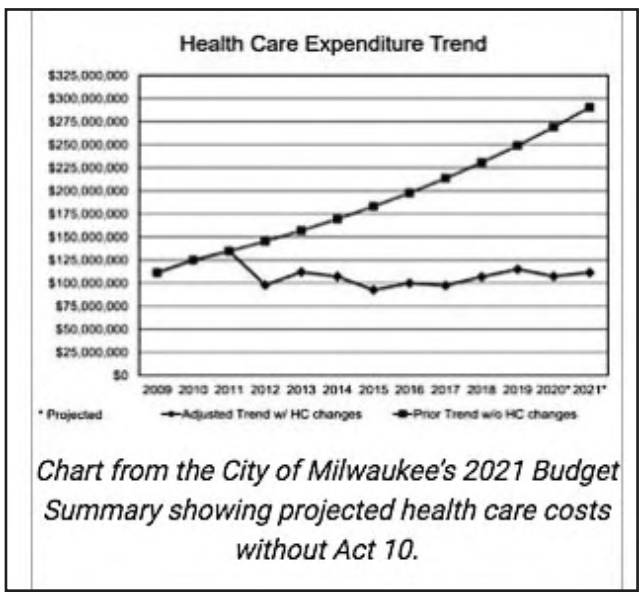


Chart from the City of Milwaukee's 2021 Budget Summary showing projected health care costs without Act 10.

The Wisconsin Department of Employee Trust Funds tracks pension fund contributions. Before 2011, the vast majority of government employees in Wisconsin did not contribute towards their pension. Since Act 10 was implemented, state, local, university, tech college, and school district government employees have contributed $9 billion to their own pensions.

That's $9 billion in taxpayer savings over ten years – just for the pension piece alone.

Tracking health insurance savings throughout the state is more complicated. There are thousands of local units of government and some Act 10 savings at the local level go unnoticed and unpublicized. Act 10 permanently changed the trajectory of those local healthcare costs. Local governments like the City and County of Milwaukee include that information in their annual budgets – and the savings continue to grow exponentially.

Using the same methodology that has always been used and the same public data sources, our new analysis shows that local governments have saved $2.4 billion, the state and university system have saved $1.2 billion, and school districts have saved $1.3 billion over the past nine years on health insurance.

That puts the total Act 10 taxpayer savings at $13.9 billion over nine years. $13.9 billion. Let that sink in for a second.

Ultimately, Act 10 finally put the State of Wisconsin, local governments and school districts back on a solid financial footing. More importantly, Act 10 ultimately put Wisconsin taxpayers back in charge of our government and back in control of our future.

Total Savings From Act 10 2011-2021

Retirement Savings		
State Government	$	1,249,119,280
University of Wisconsin System	$	1,295,321,499
Tech College System	$	389,124,791
Local Government	$	2,652,729,419
Schools	$	3,371,966,170
Health Care Savings		
State Government	$	592,684,577
University of Wisconsin System	$	600,140,727
Tech College System	$	215,972,767
Local Government	$	1,634,595,100
Schools	$	1,911,864,041
Total	**$**	**13,913,518,371**

Vaccine from Hell

cont. from page 1

that escaped from China in the past 25 years; first the bird flu, then SARS, then H7N9. The most recent large pandemic to affect USA prior to COVID-19 was the Hong Kong Flu of 1968-69." Covid-19 has a routine sound to these doctors, and the virus is not the end of the world that socialist kooks have purported it to be. AFD asserts, "American life continued entirely normally during the Hong Kong Flu, with no suggestion of locking down anything, in fact the Woodstock Festival took place in the midst of the Hong Kong Flu. We start with this to remind the reader that current information must be understood in the context of other events or the reader will be easily misled."

The following is from AFD's position paper's table of contents, "IV. COVID-19 Experimental Vaccines Controversies: Brand New Technology. Failure of Previous Coronavirus Vaccines. No Animal Studies Known. Complications Unknown. Pharmaceutical Companies are Immune from Liability. An Experimental Vaccine is Not Safer than a Very Low IFR. No Proof the Vaccine Stops Transmission of the Virus. The Vaccine Lasts Unknown Duration. The Data Has Not Been Independently Peer-Reviewed & Published."

There are other Physicians confronting the Covid-19 power grab by socialists. Dr, Andrew Kaufman said that "the vaccine is not proven safe our effective." Dr, Hilde De Smet asserted that Cov-2 vaccines have faltered in animal trials, and animal trials have been skipped, thus people are being used as guinea pigs. Dr. R. Zac Cox asserted that experimenting on humans violates the Nuremburg Code. Dr. Anna Forbes, Dr. Daniel Cullum, Dr. Anne Fierlafijn, Dr. Tom Cowan, Dr. Barre Lando, Kate Shemirani, Pharmacist Sandy Lunoe, and Acupuncturist Boris Dragin concur. Dr. Nils Fosse, Dr Elizabeth Evan of the UK Medical Alliance, caution against auto-immune diseases, infertility and sterility. Dr. Sherri Tenpenny concurs.

Dr, Vernon Coleman said the "The Covid-19 epidemic is a scam," and his 50yr career was ruined for opposing current measures. From Ireland, Prof. Dolores Cahill says Covid-19 can by treated by Vitamins B, C, and D. Lockdowns, masks, socialist distancing and a vaccine are not necessary.

Dr. Ralf Sundberg, cautioned against false positives on PCR testing. Dr Johan Denis says this is an overreaction to a mild flu, and asserts that these vaccines might change your DNA via nano-lipid technology, summarizing, "I wouldn't give this vaccine to myself or my family." Dr. Kevin P. Corbett concurs, and asserts that these vaccines haven't undergone standard "phase 3 tests." Dr. Carrie Madaj, Dr. Piotr Rubas, Dr. Natalia Prego Cancelo, Dr. Nour De San, Prof. Konstantin Pavlidis, Dr. Heiko Santelmann, Dr. Margareta Griesz-Brisson, Dr. Mikael Nordfors, Dr. Elke F. de Klerk, concur. Dr. Kelly Brogan called forced vaccines "penetration of the body, mind and spirit by the state."

This author has rejected the idea of taking this vaccine upon a cursory presentation of how it was arrived at. I thought that it was unethically produced, and the thought of getting a Genetic RNA injection is about as appealing as getting my feet x-rayed to by a new pair of shoes.

The Wisconsin State Senate want to make these vile preparations mandatory in Wisconsin to placate the Tyrant Tony Evers. When Tony Evers cites "science" what he really means is a socialist school public teachers atheistic understanding of science, as the basis to oppress real scientists from questioning the socialist paradigm. Who decides what science is? Evers' answer is that the Government, namely he does.

The Milwaukee County Constitution Party rejects the quisling Robin Vos' assertion that "the virus caused lockdowns" etc. The virus causes a mild case of sniffles, and is only threatening to people with compromised immune systems: which makes it like most any other flu on a practical level. It is socialists, using "the virus" to generate panic and tyranny, lockdowns, mask mandates and forced injections. These measures are all as un-American as the ideology that spawned them.

nun survives COVID

cont. from page 4

courage. "Let them keep hope, fight, struggle to heal and set an example," she told one journalist.

In France, 91 percent of people who died of COVID were older than 65, and old and frail or suffering from a serious chronic disease. But the media scare is all about "cases" -- people who test positive for SARS-CoV-2 (and who actually present little risk of dying).

"She showed no fear at all of the illness," Tavella confirmed.

Tavella was the one who told Sister André that her COVID test was positive. He explained to the press that he was "really worried," but his concern never rubbed off on the frail, blind nun. However, he added, "she expressed great anxiety about the other residents."

Sister André, formerly Lucile Randon, was born into a non-practicing Protestant family. She lived through two World Wars, the Spanish Flu epidemic (240,000 victims of all ages in France alone, compared with less than 80,000 victims attributed to COVID in a country that has 67 million inhabitants today against less than 39 million in 1919).

She was baptized into the Catholic Church at age 26 and worked as a governess and private schoolmistress in wealthy Parisian families, including the overtly Catholic Peugeot family. At the end of the Second World War, at age 41, she decided she wanted to "push farther" and entered the congregation of the "Daughters of Charity" of St. Vincent de Paul. She worked in hospitals for more than 30 years and retired to a rest home at the foot of the Alps at the end of the 1970s, where she stayed for 30 years before moving to Toulon, in the "EHPAD" where some 10 other Daughters of Charity also live.

Sister André can hardly believe that she had COVID-19. She insists that she never felt ill, "only very tired," and was obliged to remain in bed, with only one worker allowed to come into her room. Having to remain in her room without seeing anyone and not being able to go to the chapel for Sunday Mass were what she found most difficult. According to Tavella, it was being confined without visits for three weeks that weighed most heavily on this spirited lady.

The Saint Catherine Labouré residence had gone through the first COVID-19 episode in March 2020 without a single detected positive case or illness. Things changed dramatically about a month ago, on January 16, when a wave of contaminations took place, hitting 81 of the 88 residents. Most were "asymptomatic," meaning they were never sick at all, but 10 died.

This is quite remarkable, since the residence has always scrupulously implemented safety measures, including social distancing, masks and so on, sectioning off its inhabitants into different groups to avoid cross-contamination. None of this stopped the spread of the virus, which seems to indicate that the so-called "barrier gestures" and isolation are not the answer to COVID-19.

In Saint Catherine Labouré, vaccination against COVID had not taken place when the virus entered to the residence, and it will not be offered to those who have now had the disease or tested positive.

But while France's oldest inhabitant showed that being in good health (with a piece of chocolate and a glass of wine every day), and also having faith and hope are more important than keeping apart from the rest of humanity when it comes to beating COVID-19, two other very old French people unfortunately died of the disease recently – both just days after having received an mRNA "vaccine."

Marie-Claudine Fourrier, 110, in Saône-et-Loire, was vaccinated on January 29. She was "in good health," said the local press. A few days later, on February 1, she passed away.

In the same way, the oldest inhabitant of Brittany, Camille Lahoux, died at age 108 on February 2, five days after being vaccinated against COVID-19. His vaccination had been presented as a "victory" by the local press.

Numbers of deaths intervening shortly after the COVID-19 "vaccine" were regularly updated by the French press until January 22, at which time nine such deaths were listed. Nationwide, counts are more difficult to find now. Health authorities are repeating that it is normal that old and frail people die and that no link should be made with the COVID shot except if there is an obvious allergic reaction.

PRO-LIFE CALLS NEEDED NOW

Rock Haven Nursing Home Staffing Crisis

Dear Pro-Life Advocates Across Wisconsin and the Stateline,

Your Immediate Attention is needed NOW by placing a call to the Wisconsin Department of Health Services – Health Care Facility Complaint Hotline to request an Immediate investigation of Rock Haven Nursing Home's staffing crisis resulting from their Extreme Covid-19 Vaccine Mandate as a condition of employment. You can leave a message Today!

Complaint Filing – Health Care Facilities1-800-642-655224 hours a day, seven days per week (leave message)

Step. 2 - Feel free to sign onto this Citizen Petition sponsored by Rock County Action to Repeal Rock Haven's Extreme Vaccine Mandate:

https://rockcountyaction.com/sign-the-petition-to-remove-rock-haven-vaccine-requirement-for-employment/

On January 5 and February 2, many Rock Haven staff chose to quit or walk off the job in light of this extreme mandate.

The next round of forced vaccinations is scheduled for March according to a local news report which will lead to a predicted departure of even more staff.

In light of this staffing crisis, Pro-Life Advocates should be asking:

What is Happening to the Elderly and Disabled Patients?

• Are patients receiving their medications on schedule?

• Are med errors occurring because nurses are working significant overtime?

• Are patients being turned on schedule to prevent bed sores?

• Are incontinent patients being tended to in a timely manner?

• Are patients receiving their prescribed Physical and Occupational Therapy?

Here is a statement by one of Rock Haven's residents:

I am a resident of Rock Haven and this mandate of the vaccine has made us short staffed and the staff that is here are over worked. I think that anybody should be able to make a choice if they want the vaccine or not and not lose their job over over their decision!

Because staff refused to roll up their sleeves and take a vaccine that has not received FDA approval, the staff are basically considered 'unfit' to perform their job duties under:

Rock County Ordinance 18.613(d) – "The appointing authority may lay off an employee when an employee can no longer perform the essential functions of the job."

4 Important News Articles

1) Rock Haven Staff Criticize Nursing Home Administration During Listening Session

https://www.gazettextra.com/news/local/rock-haven-staff-criticize-nursing-home-administration-during-listening-session/article_76f6a89a-e360-53f0-aecf-35743cfb6a01.html

*On Wednesday night, the Future of Rock Haven, an ad-hoc county committee, met to discuss "employee morale-not to debate Rock Haven's controversial Covid-19 vaccination mandate." Board members received an EARFUL from a dozen Rock Haven staffers who are working extreme Overtime offers. This Janesville Gazette article stated the staff addressed the "heavy-handedness, retaliation, and bullying by top Rock Haven officials" even stating Interim Director "Beran should resign or be removed."

**One of the County Board Supervisors, Yuri Rashkin, said it is unlikely they County will repeal the extreme vaccine mandate, but said "…it is possible the county might offer some 'INCENTIVES' such as pay increases to staff…" who go along with being vaccinated.

2) Rock Haven Administrator Says Staffing Fine, Despite Employee Concerns

https://www.gazettextra.com/news/local/rock-haven-administrator-says-staffing-fine-despite-employee-concerns/article_eb236fd8-eda1-5686-9b9b-ed12060c021f.html

* Please Note the hypocrisy between the title of this article and this statement about the mass "staff exodus" contained therein: "The nursing home is prepared to work with 6 staffing agencies to find contract nurses if replacement staff are needed." This is yet another unnecessary expense being forced on taxpayers by this extreme vaccine mandate.

3) Attorneys Threaten Legal Action Over Vaccination Mandate, Rock Haven Layoffs

4) Rock Haven Loses More Staff Over COVID-19 Vaccine Mandate

GOVERNMENT CIRCUS

The Scum Queen

"And Ahab told Jezebel all that Elijah had done, and withal how he had slain all the prophets with the sword. Then Jezebel sent a messenger unto Elijah, saying, So let the gods do to me, and more also, if I make not thy life as the life of one of them by tomorrow about this time." I Kings 19:1-2

By Riley J. Hood—Milwaukee County Constitution Party

This time last year, Nancy Pelosi, animated by her emotions and ingrained vile affections impeached President Donald Trump, at the behest her fellow socialists. She did so again this January, in an attempt to permanently disqualify President Trump.

She was born on March 26th, 1940 in Baltimore as Nancy Patricia D'Alesandro. She went to college at Trinity Washington University. Her spouse is Paul Pelosi. According to biography.com, Pelosi made, "the leap to public office in a special election for California's Eighth District in 1987." In 2006, she became the first female speaker of the House of Representatives, yet the leftwing news act as if this happened in 2018. In 2009 she had the votes to impose Obama-care upon us. She wrote a Book called Know Your Power, and seems to be her life's credo.

Her mouth is enormous, she could sell wind energy back to the green energy producers; biography.com says, "On February 7, 2018, Pelosi delivered a marathon speech on the House floor to protest legislation that lacked protection for Dreamers," using the "magic-minute rule," Pelosi read "testimonies from Dreamers and recited Bible passages, in all standing for some eight hours and seven minutes, a House record dating back to at least 1909."

In 2019 she cut off funding for Trump's border wall, causing a 35day government shutdown which was blamed on Trump. She and her socialist buddies impeached Trump based on hearsay from a phone call. Now she is blaming Trump for a riot, as opposed to fact that people are frustrated by socialist cheating and the socialist destruction of our nation. Pelosi is a shill for AOC and the other she-devils on the squad. After Trump sent these hussies a love America or leave tweet, Pelosi led a vote to formally condemn Trump as being racist.

Pelosi is using Trump to shift responsibility and the spotlight away from her intrinsically evil ways. According to her own website pelosiforcongress.org, "We need strengthened background checks – to keep guns away from those who shouldn't have them." Pelosi is one of those that "shouldn't have them," after all Communists have murdered hundreds of millions of people. Seeing as how "no one is above the law," she should not have armed security guards, and take her chances every day like the rest of us.

Pelosi on energy, "Republicans have accelerated their assault on our environment with a dirty energy agenda that harms God's creation by weakening critical clean air and clean water protections, auctions off our public lands, and enriches polluters and Big Oil." Pelosi should live in an unheated home, and ride a pedal bike or walk, but she won't. She calls it "dirty energy" but she loves it for her own lifestyle.

Under human rights, there is a picture of her making a fist wearing a rainbow wristband. "Democrats have made much-needed progress toward ending discrimination against the LGBT community. But more must be done to achieve full equality under the law. That is why Democrats will continue fighting for the Equality Act and ensure our courageous transgender troops are protected from Trump's misguided policies that punishes people for who they are." Sodomy is crime that you commit, so is prostitution.

Prochoicecalifornia.org says, "NARAL Pro-Choice America today announced its endorsement of US House Speaker Nancy Pelosi in her campaign for re-election to represent California's 12th Congressional District." Pelosi is, "a steadfast fighter for reproductive freedom," according to Ilyse Hogue, NARAL Pro-Choice America President, saying "Her leadership is critical to hold anti-choice politicians, including Donald Trump, accountable for their insidious attacks on our fundamental freedoms, including the ability to make personal decisions about pregnancy free from political interference." Shannon Hovis, Director of NARAL Pro-Choice California, screeches. "She has been resolute in her dedication to reproductive freedom for everybody." Everybody, except that little baby who never gets to grow up, go to school, make someone, get married and have children of their own. According to NARAL, "Reproductive freedom is under relentless attack across our country," said Speaker Pelosi. "But with the support of NARAL, we will defend Roe v. Wade, support patients' health care and a woman's right to choose." No mention of "God's creation" regarding the Pre-born from this fire breathing dragon. All Nancy's children were born before Roe v. Wade, so what does that tell you? She has never heard of an abortion she wasn't for. For these reasons, I scruple not to call Pelosi a Scum-Queen. While Trump is no Elijah, Pelosi is no lady. She would be the American Jezebel, but Hilary Clinton already holds that title. Like Jezebel, Pelosi will be a persecutor of the saints and patriots. Again, she is emotionally driven by her inordinate affections. According to antlanticmidwest.org her "Baltimore Catholic roots shaped her," so maybe some Roman Catholic patriots can send her a Bible.

Where do these idiots come from?

Astounding thought process. If someone were to kick in her door at 3am and stick a 9mm in her face and tell her they need her money more than she does, how would that work? It's called the law of unintended consequences.

Her key thought (If what she is proposing can be classified as thinking.) is found in the next to the last sentence. We MUST achieve a more equitable distribution of wealth.

Here is the situation. In the Texas legislature, State Representative Terry Meza (D-Irving) has introduced HB196. Her bill would repeal the state's "castle doctrine." This doctrine allows a homeowner to use deadly force against an armed intruder who breaks into his home. I say here, here.

Now listen to what she has to say... "I'm not saying that stealing is okay," Meza explained. "All I'm saying is that it doesn't warrant a death penalty. Thieves only carry weapons for self-protection and to provide the householder an incentive to cooperate. They just want to get their loot and get away. When the resident tries to resist is when people get hurt. If only one side is armed fewer people will be killed."

Meza was quick to reassure that her bill "would not totally prevent homeowners from defending themselves." However, under her proposed new law, the homeowner's obligation is to flee the home at the first sign of intrusion. If fleeing is not possible, he must cooperate with the intruder. But if violence breaks out it is the homeowner's responsibility to make sure no one gets hurt. The best way to achieve this is to use the minimum non-lethal force possible because intruders will be able to sue for any injuries they receive at the hands of the homeowner."

Meza continues her logic by saying, "In most instances the thief needs the money more than the homeowner does," she reasoned. "The homeowner's insurance will reimburse his losses. On balance, the transfer of property is likely to lead to a more equitable distribution of wealth. If my bill can help make this transfer a peaceful one so much the better."

Tulsi Gabbard

cont. from page 1

responsibilities, they were acting as domestic terrorists undermining our Constitution," Gabbard told Carlson. "As you pointed out in my video, those like John Brennan, Adam Schiff, and others are also acting as domestic terrorists because they are also undermining our Constitution by trying to take away our civil liberties and rights that are guaranteed to us."

Gabbard pointed out exactly how the Democrats are undermining our God-given rights.

"If you don't mind, I'd like to just quote John Brennan directly so that people can't say I'm taking this out of context, directly, John Brennan says: 'Members of the Biden team who have been nominated or appointed are now moving in laser-like fashion to try to uncover as much as they can about what looks very similar to insurgency movements they've seen overseas where they germinate in different parts of the country and gain strength and bring together an unholy alliance, frequently of religious extremists, authoritarians, fascist bigots, racist, nativist, and even libertarians,'" she said.

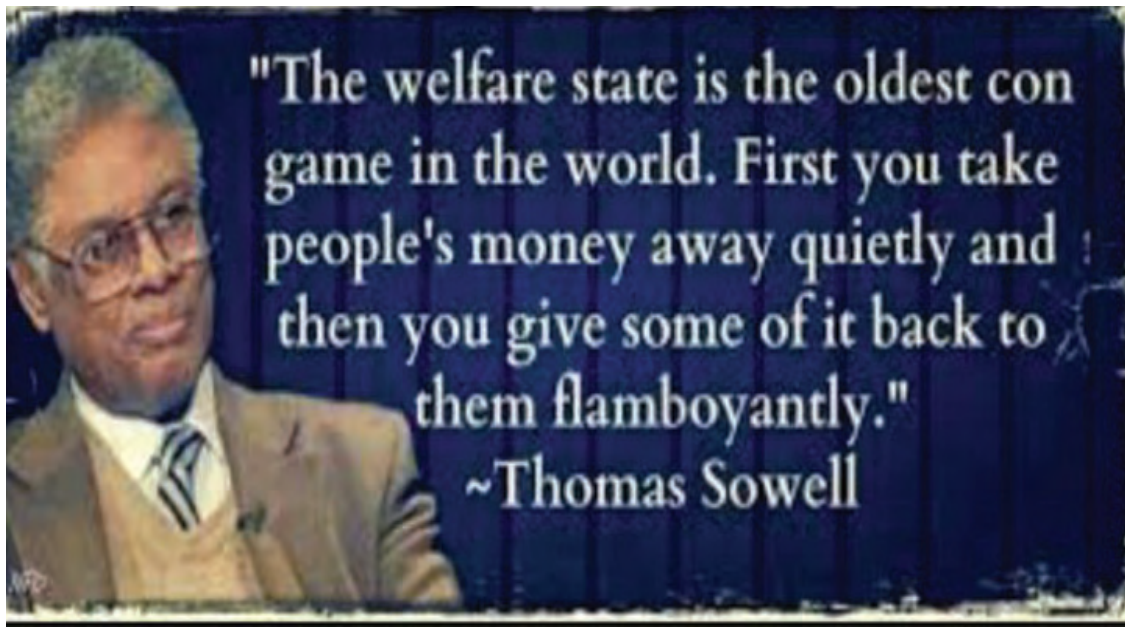
"This is the extent that they are going to try to undermine the rights and freedoms that are guaranteed to every one of us, and it is incredibly dangerous," Gabbard added.

Carlson noted that it isn't just government officials moving in and silencing our rights. Major corporations are effectively helping authoritarians with silencing and suppressing Americans. He asked Gabbard what we can do to fight back.

Gabbard urged Americans to keep speaking out and that taking a stand and uniting around the principles in our Constitution is priority number one. She added that free speech should be practiced everywhere, no matter the platform, because big tech is attempting to silence everyone on theirs.

She also urged the American people to contact President Joe Biden and members of Congress to stand against and denounce the actions of people like Adam Schiff.

Carlson ended the segment by noting that the reason the Democrats hated Gabbard so much during the 2020 elections was simply due to the fact that she was speaking up for the rights of the people, which the left couldn't stand.



Biden Reality Czar *cont. from p1*

purpose, a responsibility to shape the "truth" as ordained by official "Big Brother" doctrine.

Housed in an enormous glistening white pyramidal structure amid a landscape of sagging houses and rubble, Minitrue's outside wall was emblazoned with three Big Brother Party slogans: "WAR IS PEACE," "FREEDOM IS SLAVERY," and "IGNORANCE IS STRENGTH."

Minitrue's central mission was to manufacture lies to ensure that Big Brother and his government's policies and actions were always seen to be correct and in the best public interest. Primary influence targets and collaborators involved the news media, entertainment and educational book publishers.

The agency accomplished its propaganda purposes by administering a new language throughout the populace called "newspeak" which allowed unauthorized facts to be changed as special situations warranted through a process of "doublethink."

Newspeak reinventions included doctoring records to show government-approved versions of current and historical events. Disfavored accounts and documents were put in "memory holes" and expunged from history in large underground incinerators.

Within the novel, Orwell elaborates that the reason for Minitrue's existence is to maintain the illusion that the Party is absolute … to never show weakness. To maintain power, Big Brother must always be seen as eternally right and strong.

Keeping the population confused about who is at war with whom and the true reality of things causes them to become involved in nothing, and therefore, no threat to the power structure.

But, of course, nothing like that would ever happen in the "real world;" not in America.

Right?

New York Times technology columnist Kevin Rose wrote that several experts he spoke with had recommended that the Biden administration "put together a cross-agency task force to tackle disinformation and domestic extremism, which would be led by something like a 'reality czar.'"

In his article, "How the Biden Administration Can Help Solve Our Reality Crisis," Mr. Rose pointed out that the "muddled, chaotic information ecosystem that produces these misguided beliefs" not only jeopardize a "lofty ideal of unity," but also "creates more work for those trying to solve [the disuniting problems]."

Kevin Rose worries that "unless the Biden administration treats conspiracy theories and disinformation as the urgent threats they are, our parallel universes will only drift further apart, and the potential for violent unrest and civic dysfunction will only grow."

Rose expressed special concern that "more than 70 percent of Republicans believe Mr. Trump legitimately won the election."

Not mentioned, was that attorneys general of 18 states had joined a Texas lawsuit petitioning the U.S. Supreme Court to review compelling evidence of widespread election abuse in four key battleground states explicitly listing sufficient fraud and irregularities to have changed the results in each favoring Trump.

Joan Donovan, the research director of Harvard University's Shorenstein Center on Media, Politics and Public Policy, suggested that the Biden administration could set up a "truth commission," similar to the 9/11 Commission, to investigate the planning and execution of the Capitol siege on Jan. 6.

"My fear," Donovan said, "is that we will get distracted as a society and focus too much on giving voice to the fringe groups that came out in droves for Trump."

Perhaps a doublethink commission might also expand their venue of investigations to address the "fringe groups" that came out in droves to loot, vandalize and burn countless public and private properties during the past "summer of love."

New York University's Stern Center for Business and Human Rights released a brief that is being amplified in the press titled, "False Accusation: The Unfounded Claim that Social Media Companies Censor Conservatives." It argues that "some conservatives believe their content is suppressed on partisan grounds when, in fact, it's being singled out because it violates neutral platform rules."

By "neutral platform rules," do you suppose they are referring to Orwellian newspeak Twitter and Facebook suppression of a New York Post story about possible Biden family influence peddling and other potential criminal acts discovered on son Hunter's laptop from hell during the run-up to the 2020 election campaign?

Were Obama-Biden Ministry of Truth's memory hole incinerators ablaze when correspondence on the laptop revealed a proposed 10% equity cut for his dad, "the big guy" (a Big Brother, maybe) on a deal with a Chinese company with broadly known Communist government and military ties when Joe was vice president?

Or were neutral, objective mainstream media anywhere to be seen reporting why less than two weeks after accompanying his father on an official 2013 visit to China aboard Air Force Two, Hunter inked a $1.5 billion investment deal with the Communist state-owned Bank of China on behalf of a private equity firm he had established in 2009 with Christopher Heinz, the stepson of former Secretary of State John Kerry?

Can you imagine a more illustrious example of doublethink than impeaching President Trump for a telephone conversation with Ukraine President Volodymyr Zelensky about a $1 billion extortion bribe then-Vice President Joe Biden publicly bragged about in return for having a prosecutor fired who was investigating notorious corruption in a company where Hunter was being paid as a no-show board member?

On that subject of neutrality, what about fair and open reporting by our own government?

Like, for example, when 30,000 of Hillary Clinton's emails – many containing classified information – went down the Obama-Biden administration's memory hole?

That was occurring when the administration's spying on the 2016 Trump campaign prior to inauguration soon developed into a major post-election deep state effort to undermine and terminate his presidency … a time when Vice President Biden reportedly suggested justifying investigations of incoming Trump Security Adviser Lt. General Michael Flynn based upon the obscure 1799 Logan Act.

All of this was premised upon a bogus "dirty dossier" sponsored and funded by the Clinton campaign through which the DOJ and FBI obtained Foreign Intelligence Surveillance Act (FISA) court warrants falsely alleging evidence of "Russian collusion."

And wasn't a Durham investigation report originally scheduled for release before the election that would reveal how that deep state FISA court disinformation campaign came about – and who planned it?

Maybe a Biden Ministry of Truth Reality Czar can provide some perfectly good doublethink newspeak answers we will all compliantly agree with in the interest of achieving Oceana-model unity?

Larry Bell is an endowed professor of space architecture at the University of Houston where he founded the Sasakawa International Center for Space Architecture (SICSA) and the graduate program in space architecture. Larry has written more than 700 articles for Newsmax and Forbes and is the author of several books. Included are: "How Everything Happened, Including Us" (2020), "Cyberwarfare: Targeting America, Our Infrastructure and Our Future" (2020), "The Weaponization of AI and the Internet: How Global Networks of Infotech Overlords are Expanding Their Control Over Our Lives" (2019), "Reinventing Ourselves: How Technology is Rapidly and Radically Transforming Humanity" (2019), "Thinking Whole: Rejecting Half-Witted Left & Right Brain Limitations" (2018), "Reflections on Oceans and Puddles: One Hundred Reasons to be Enthusiastic, Grateful and Hopeful" (2017), "Cosmic Musings: Contemplating Life Beyond Self" (2016), "Scared Witless: Prophets and Profits of Climate Doom" (2015) and "Climate of Corruption: Politics and Power Behind the Global Warming Hoax" (2011). He is currently working on a new book with Buzz Aldrin, "Beyond Footprints and Flagpoles."

JFK: A Hero at 26

The Epoch Times

Long before John F. Kennedy became America's 35th president, he had already established himself as a capable leader, with a story that would follow him straight into the White House.

On August 1, 1943, Kennedy, then a 26-year-old lieutenant with the U.S. Navy, had been at the helm of a patrol boat that collided with a Japanese destroyer. The impact damaged the boat beyond repair, forcing the crew to abandon ship.

The surviving crew then made the three-and-a-half-mile swim to a nearby island, where they set up camp. They had few resources, but seeking help was a challenge because of their proximity to the Japanese forces.

So, Kennedy, being at home in the water, took it upon himself to be the scout. He swam to sea routes that Allied forces frequented, and to different islands for resources to sustain the crew.

By chance, two islanders who had spotted Kennedy one day met up with his crew. Luckily, these islanders were working for the Allies as scouts. One of them showed Kennedy how he could scratch the husk of a coconut to write a message, which he did. The islanders then took the coconut back to the Allied forces.

The crew of the ill-fated patrol boat returned to the U.S. base at Rendova Island in the morning of August 8. For his courage and leadership, Kennedy was awarded the Navy and Marine Corps Medal, as well as a Purple Heart for the injuries he suffered.

When he was asked later about how he came to be a hero, his answer was short: "It was involuntary. They sank my boat."

The coconut with his carved message for help was made into a paperweight that he used in the Oval Office, a constant reminder of a time when he led a group of people against the odds—and won.

Unconstitutional Delegation

cont. from page 1

Parler was shut down. A swath of conservatives lost the ability to speak on the Internet, the nation's new public square, the place where political ideas are exchanged, and commerce flows.

Two questions must be answered –

1. Can private parties controlling the public square, deprive citizens of their right to free speech? and

2. Can Congress empower private parties to regulate competitors?

Congress spectacularly muddled section 230 and the U.S. Supreme Court has not addressed it. Fortunately, decades-old Supreme Court cases involving the tech giants of yesteryear, i.e., coal companies, railroads, and company towns, provide guidance on the limits of big tech's power to regulate the public square.

What does section 230 do?

Section 230 has two primary provisions. The first exempts internet providers from civil liability for publishing any information from another content provider that is objectionable. The second provision exempts Big Tech from liability when it takes voluntary, good faith actions, to restrict objectionable materials or provides the technical means to restrict them.

Private parties cannot deprive unpopular citizens of constitutional rights when governing the public square

By granting Big Tech immunity from civil liability when restricting material from the Internet it deemed objectionable, Congress encouraged and indirectly authorized private parties to regulate speech. Congress has no constitutional power to authorize private parties to deprive, even unpopular citizens, of their constitutional rights. Moreover, when private parties control the new public square they function as a government and must provide constitutional rights for all.

These principles are set out in Marsh v. Alabama, (1946). Marsh, a privately owned town, made it illegal for persons to distribute religious literature on its sidewalks. Since the town functioned like any other community having speech and commerce, citizens in the town had the same rights as if in a municipal town. When private parties wield great power over the public's use of town services, the powers of the private parties are circumscribed by the statutory and constitutional rights of those using the town. Private property rights are not sufficient to justify restricting fundamental liberties.

Since the First Amendment severely limits governments' power to regulate political speech, the government cannot grant private parties, functioning as a government, more power than it has. If Congress desires to impose speech limitations on the Internet, it must do so directly, by government regulation that protects the constitutional rights of citizens.

Congress cannot grant private parties the right to regulate competitors

By refusing to sell Parler's app, and by denying Parler's access to cloud storage, Google, Apple, and AWS, private parties, relying on a congressional grant of civil immunity, took, in essence, regulatory actions to put another private company out of business. Congress has no constitutional authority to authorize, or foster conduct by private parties, that allows them to regulate other businesses. This has been the law since the U.S. Supreme Court's decided Carter v. Carter Coal, (1936).

In Carter, Congress delegated to coal producers and miners the power to impose standards on other producers and miners. Carter held a private entity "…may not be entrusted with the power to regulate the business of another, and especially a competitor. Any statute which attempts to confer such power undertakes an intolerable and unconstitutional interference with personal liberty and private property. The delegation is so clearly arbitrary, and … a denial of…due process…"

By granting immunity from liability to big tech for restricting materials Big Tech deems objectionable, Congress is sanctioning the regulation of private parties by other private parties, an action it has no constitutional authority to authorize. Regulating competition is the responsibility of the government.

The principles in Carter were upheld by the DC Circuit as recently as 2013 in American Assn of Railroads v.US DOT (reversed on other grounds).

Section 230 immunity from suit encourages Big Tech to assume the regulatory functions of government by regulating the rights of other businesses to speak and compete in the public square. The Constitution does not give Congress or private parties this power.

William L. Kovacs, author Reform the Kakistocracy: Rule by the Least Able or Least Principled Citizens; and The Left's Little Red Book on Forming a Green New Republic; and former senior vice president, U.S. Chamber of Commerce.

The Words of a "Vile Race of Quislings"

"As if a man did flee from a lion, and a bear met him; or went into the house, and leaned his hand on the wall, and a serpent bit him." Amos 5:19

By Riley J. Hood—Milwaukee County Constitution Party

When you work with your friends, that is called co-operation. When you work with the enemy, that is called collaboration. Democrats are the enemy. Real Americans don't vote Democrat, they are the destroyers of our Republic, federally and in Wisconsin. Tony Evers is a tyrant, he is an enemy of God, and thus an enemy of Wisconsin. The Enemy is the enemy, is the enemy, is the enemy. Winston Churchill called such men "Collaborators" and "A Vile Race of Quislings."

On February 4th, 2021 our Wisconsin State Legislature revealed their fawning obsequiousness. "Dear Governor Evers, As we began 2021, we were hopeful your administration would work with us on some of the serious issues that plagued Wisconsin during 2020." These guys know how to do the low-bow, "We again confirm our willingness to work with you on each of these issues in the hope of finding long-term bipartisan solutions. When the pandemic began last year, we worked cooperatively with your administration and our Democratic colleagues to pass bipartisan legislation that contained over 55 provisions that gave you the tools to help deal with the virus and assist those who were suffering from the economic devastation of Wisconsin's response." The "tools" of tyranny. "In three different instances, we have asked to work together and you chose a go-it-alone approach that ultimately was unlawful and damaging to the citizens of the state of Wisconsin." How does the GOP catering to Evers and passing laws favorable to him, or his successors, help Wisconsin? if the GOP truly opposes Evers policies? Maybe these men can't see the communist forest through the socialist trees, when they call our enemies their "Democratic Colleagues."

The GOP writes, "The citizens of Wisconsin are sick and tired of your go-it-alone approach." Citizens of Wisconsin hate masks, the socialist slaves of Wisconsin love them, yet the GOP is willing to, "Enact reasonable masking requirements in places in Wisconsin that are susceptible to transmission of the virus to those who are especially vulnerable, such as health care facilities, nursing homes, mass transit, state government buildings, assisted living facilities, public schools, universities, and prisons. 2) Allow any private or public entity in the state that would like to require face masking to be allowed to do so on their property." We already have this. This is socialism.

This letter wasn't just signed by one man. "Sincerely, Rep. Robin J. Vos Rep. Jim Steineke Assembly Speaker Majority Leader Rep. Tyler August Rep. The GOP has the support of most Christians and almost exclusively so. Yet, the GOP are the authors of Roe v Wade, (Blackmun was an Eisenhower/Nixon appointee, they are also abettors in our 48 year and counting legal abortion murder spree. The GOP sold you out regarding the Moral Order, and now they are parleying with enemy regarding your freedom. We started the Constitution Party because unqualified support for the GOP results in loses for the Republic, time and time again. We mean to interpose on behalf of our Citizens. We have memberships and friend of Party status, and we are not about "handing victories to the Democrats" something the GOP in spite of million-dollar donors and media networks seems to do on their own, time, after time, after time. If you are tired of criminals and their liberal allies, join the Constitution Party.

The Constitution Party of Wisconsin,
a recognized political party, promotes the Biblical principles referred to in the Declaration of Independence and United States Constitution. We promote these principles by guiding our members into positions of civil authority.

CPOW is:

- 100% Pro-Life-We will re-secure the Right to Life.
- 100% Pro-Family-One Man, One Woman marriage.
- 100% Pro-Gun-We reject any form of gun control.
- 100% Pro-Constitution-We will cut the federal government down to Constitutional size.
- 100% Pro-America-We favor American Liberty, America's economy and American energy for the American People.

Individual membership is $30.00 per person per year and Friend of the Party status is $20.00 per year.

Black Pot Equity

"Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven; but he that doeth the will of my Father which is in heaven." Matthew 7:21

By Riley J. Hood—Milwaukee County Constitution Party

Yahoo-News posted a story written by Marquise Francis on Fri, February 5, 2021, "Former NBA star presses lawmakers for Black equity in marijuana industry. Senate Majority Leader Chuck Schumer and Sen. Cory Booker and Sen. Ron Wyden announced this week that they are working to advance comprehensive marijuana reform legislation. 'The War on Drugs has been a war on people — particularly people of color,' the senators said in a joint statement on Monday. "Ending the federal marijuana prohibition is necessary to right the wrongs of this failed war and end decades of harm inflicted on communities of color across the country." What nonsense. In the 1980's the Black Community wanted drug interdiction, blaming foreign cartels for the own neighborhood's criminal behavior, but now they have moved from shifting responsibility to direct support for criminals. "But that alone is not enough," the statement continued. "As states continue to legalize marijuana, we must also enact measures that will lift up people who were unfairly targeted in the War on Drugs." Like Manuel Noriega or Pablo Escobar? No, they mean the corner dealers, who make more money in one night than a working man makes in two months, you know, those victims. They do not mean people who have overdosed, or stooped to prostitution to support their habit.

Mr. Francis then launches into a promotion of an ex-NBA player turned pot-dealer named from Al Harrington. "We represent less than 4 percent of the industry, especially when you talk specifically to Black ownership and participation," Harrington said. "We have to figure out a way to stop that and to get more involved in the industry. Social equity in theory is a good program, but until we can figure out funding, it's something that we're not going to be (sic) to take advantage of." Only 4% of legal pot must be a bummer to gangsters after having far larger percentages when it was illegal. The funding? Your customers are addicts and you can't come up with your own money, you want my taxes?

Mr. Francis reported Al's corrupt version of faith, "Harrington considered giving up the marijuana business and investing in real estate instead. But he said that his experience in pro basketball reminded him of the need to believe in himself." Harrington believes in himself, as opposed to God because he has been told repeatedly that his self-interest is truth because he is black. Harrington says, "You've got to really work for what you want and you have to believe in something. You have to believe in what you're doing more than anybody else and never quit." Al believes it is a righteous thing to enrich himself selling a product that destroys other people's lives. He tries to say he is inspired by his Grandmother who had glaucoma, reading her Bible. Then Al says, "Our purpose is really focused on creating opportunities and empowering people of color to be able to participate in a space and industry that was used to destroy our communities."

The Democrats, the ACLU, the libertarians and other scum are about legalizing their favorite vice, but it will be the addicts and the working people who will be hit with bills and the pain, while the drug dealer will simply move uptown, and have the law on his side. The Democrats have the votes to do it, and Biden will sign the national destruction into law. The same crowd will legalize prostitution and strike down age of consent laws, all to abet the criminals they love so much. The GOP will sell you out when the pressure is on, as Scott Walker legalizing CBD has put Wisconsin in play to legalize pot. Evers, Mandela Barnes and their fellow criminals are once again pushing for legal pot so they can be as high as they want to be. The Milwaukee Common Council is down with pot equity, and describes legal marijuana as a racial issue, and they think Silk Exotic is an economic opportunity.

Now, most conservative sycophants would tell you that black people being pot smokers is insulting to black people, but if those black people being insulted don't care to speak up, I won't carry water for them. I find it insulting. People who smoke pot are weak. They are queers like Jed Ziggler, Josh Fauver and Cody Quirk. You can legalize something but you can never make it right. Poverty and crime will increase, so will your taxes. The roads will keep getting worse as we add pot to the drunk driving mix.

After I got out of the USMC, I was approached by a man from the Mongols motorcycle gang. They were being wiped out by the Hell's Angels and offered my easy money to shoot one their M60 machine guns. I turned them down, because they are still drug dealers on two wheels. I have worked factory jobs ever since. My wife has glaucoma, and has experienced vision loss due to a botched operation. All the pot in the world won't her better, but as she is now a committed Christian, wild zontars couldn't force her to puff that skeevy stuff. If I was black, I would find it insulting that based on my appearance I must be a druggie, but my wife and I are white, so to the liberal our lives don't matter.

The Milwaukee County Constitution Party supports the Moral Order, we support laws against drugs, including marijuana and we committed to bearing down on gambling, drinking, drugs, prostitution and other monkey business and shenanigans that have turned our hometown into a cesspool.

The Muslim Report: Kyrgyzstan

"Let us hold fast the profession of our faith without wavering; for he is faithful that promised;" Hebrews 10:23

By Riley J. Hood—Milwaukee County Constitution Party

Kyrgyzstan is 86% Muslim. Many employers in Kyrgyzstan demand that their employees practice Islam. This means kneeling toward Mecca, when "prayer time" is called for out of the Mosque. These employers won't hire Christians. It is an economic jihad. Christians must be taught how to start their own companies, and hire their fellow believers. If not, men look abroad for work, leaving the women and children, thus weakening their families and their churches.

Under their draconian 2009 Religion Law, Church registration requires the names of 200 people on the application. The application may or may not be granted, but I'm quite certain 200 names will be added to a watch list. Never the less over more 80 Churches have a license to exist from the state since 2017. Last year the Government made its 2009 Religion Law even more draconian and censored Christian literature and outlawed any Christian witness whatsoever.

In May of 2018, a Christian woman was imprisoned, beaten and abused in her house by her Muslim husband, in an effort to make her deny Christ. Furthermore, Christian children face abuse at the hands of their Islamic classmates, even stoning, and this is encouraged by their Islamic teachers, Imams and Mullahs. In 2020, a woman converted to Christianity after her husband died. Her brother and the local Imam incited a mob of 200 Muslims to stop her from burying a Christian friend in the local cemetery. According to Barnabas AID, her eldest brother is that nation's poet laureate and he has disowned his sister as he views Christianity to be a stain on the family honor.

During the first wave of Covid-19 the government imposed a lockdown, under the second wave, the government imposed lesser restrictions fearing a revolt. Some medical workers have gotten sick, and some hospitals are overwhelmed. There are many criticizing the government, which is using data from What's Up, and Instagram apps to track dissenters.

In spite of a lockdown, a Church is growing in Issyk-kul, a Muslim stronghold, because they have several small cell groups meeting. When there are new converts, "Usually the whole village rises up against them" according to a Church leader. Another leader is a 62yr-old woman who said, "All the people in the village know that I am a Christian and persecute me together." She was threatened by her Muslim neighbors after leading a young lady to the Lord. She was stabbed in her stomach, and taken to the hospital. It is a miracle she got medical care as Islamic doctors in that area of the world often leave Christians to die.

The freedoms we have in America are from God, and by that the Milwaukee Constitution Party means The Father, Son and Holy Ghost. When we thank God on Thanksgiving Day, we never mean Allah, no matter what the libertarian infiltrator Don Blankenship says. If Islam gets a working number here, they will do the same things on our soil.

The Muslim Report: Chad

"For whosoever shall call upon the name of the Lord shall be saved." Romans 10:13

By Riley J. Hood—Milwaukee County Constitution Party

Chad is a Muslim majority nation. Christians were 34% of the population in 2019. Islam is enshrined in the Constitution, and Sharia is the standard practice, though it is not in the Constitution. The President Idriss Deby Itno is a corrupt strongman, and leader of a welfare army that abuses weaker people and defends no one.

Both Islamic Arab nomads and Islamic Fulani herdsmen burn down the farms of Christians, spreading famine and expanding the Sahara Desert. The UN warned that the Islamic violence and destruction has brought on a famine, and Chad is facing a "humanitarian crisis."

Since 2009, Boko Haram has been attacking Christians who live near Lake Chad, murdering, killing livestock, burning churches and destroying farmland.

According to one Pastor, Islamic missionaries, with money from Turkey are using conversion to Islam as a requirement for food relief. In addition to the Islamic induced famine, there was flooding in another part of the country, and a Covid-19 panic and lockdown. The Pastor says, "Poor Christians in Chad are presently worried about food, health, housing, education for their children, and the survival of their faith."

Stoning

"And cast him out of the city, and stoned him: and the witnesses laid down their clothes at a young man's feet, whose name was Saul." Acts 7:58

By Riley J. Hood—Milwaukee County Constitution Party

Stoning was a punishment prescribed and used in the Old Testament. In New Testament, Stephen, the Martyr was stoned. Stoning was not the only prescribed method of Capital Punishment, in the Old Testament, much to the chagrin of some Reconstruction guys. Stoning was embedded in Judaism until the Diaspora.

The infliction of the Death Penalty for murder, was embedded in Christian culture until fairly recently. The death penalty for rape, adultery and sodomy has been challenged as well. Justice in human hands, even under good intentions can be miscarried. (One can cite Salem Massachusetts 1692, when a Court of Oyer and Terminer believed the false accusations of snitches, because they were young girls. The result was 19 people hanged and one man pressed to death for witchcraft.)

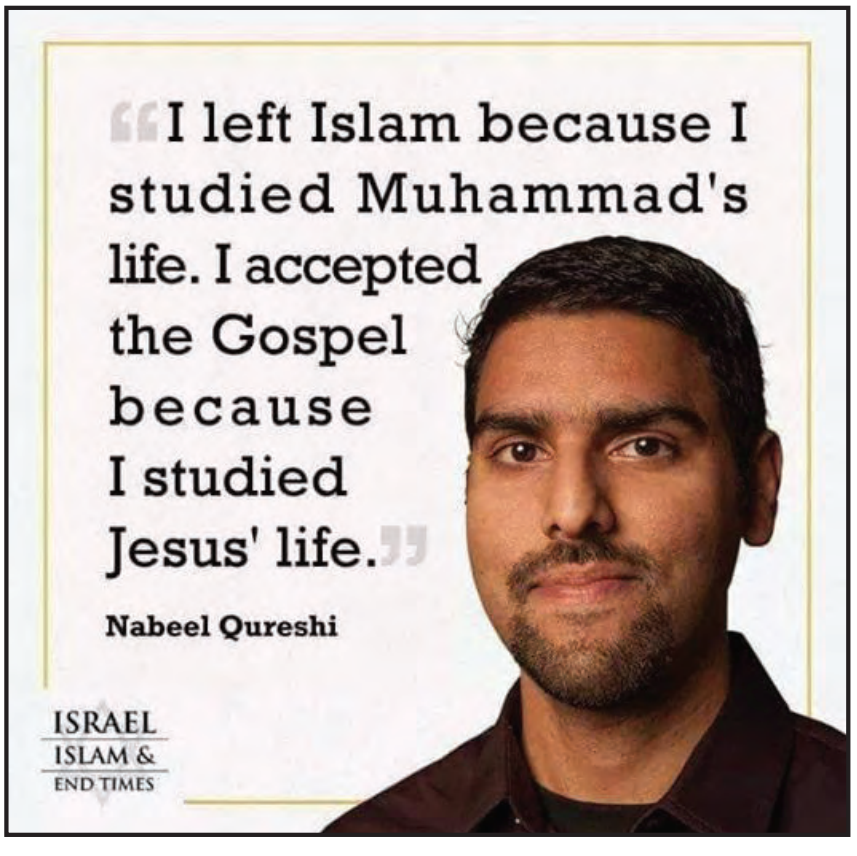
Nowhere is stoning embedded as it is in Islam. The Stoning of Soraya M. was a 2009 movie based on a book by Freidoune Sahebjam, an Iranian living in France: La Femme Lapidée. His 1990 novel, about Soraya Manutchehri, which was translated four years later as The Stoning of Soraya M: A True Story. Why has stoning persisted in the Islamic world today? The answers are numerous, but one answer comes from the fifth pillar of Islam. The Hadj.

Part of the ritual of the Islamic Pilgrimage to Mecca known as the Hadj is where Muslims stone the devil. According to Wikipedia, "The Stoning of the Devil ('throwing of the jamar [place of pebbles]' is part of the annual Islamic Hadj" to "Mecca in Saudi Arabia." Newsweek.com in 2019 reported on this obvious historical fact saying "Every year, as millions of Muslims travel to Mecca for the annual hajj pilgrimage, they perform a ritual known as 'the stoning of the devil.' Throughout the first day of Eid al-Adha, pilgrims who have traveled to Saudi Arabia visit a site in Mina," nearby, "Mecca. There, the believers, clad in simple white garments, begin throwing small stones from a three-story high bridge at three walls repeatedly, symbolically attacking Satan with pebbles. 'This is the embodiment of the Prophets Ismail and Ibrahim (Abraham) fighting the devil,' Egyptian pilgrim Mohammed al-Jawhiri, 56, explained to Reuters. 'The ritual reveals the extent of the devil's evil and his actions to destroy this world."

The Milwaukee Constitution Party asserts that this is spiritual conditioning that prepares the Muslim to engage in violence. Demonize your target, and any pretext will do. Jesus fought the Devil by prayer, fasting and quoting Scripture during His temptation. There is no Bible reference of Abraham or Ishmael ever casting stones at the Devil. The Muslim has a penchant for stoning based on their tradition. People have done things in the name God that cannot be considered "what a good Christian should do." But when a Muslim man has a woman stoned after raping or beating her, or when a father murders his daughter to save the family honor: those are good Muslims acting in accordance to the Quran and the Hadith. They view Mohamed as perfect, and a "prophet" surpassing Jesus Christ, thus Islam is incapable of reform.

The Milwaukee County Constitution Party supports the death penalty, but we also favor swift execution, and stoning is not swift. Our platform affirms that we favor the right of states and localities to execute criminals convicted of capital crimes. We also assert, "local criminal justice processes should be limited to that which is Constitutionally permitted." Furthermore, we oppose defendants being charged and tried by both state and federal jurisdictions under different laws for the same alleged criminal act, thus violating the constitutionally secured prohibition against double jeopardy. We are opposed to "hate crime" legislation and to enhanced penalties for so called hate crimes. The real result of the "hate crime" designation is affirmative action, creating a "legal nobility class."

We reject the use of snitch systems, which uses the arm of civil authority to settle personal scores. We assert that limited government means limited use the of death penalty, for well-known crimes such as murder. We oppose the use of torture as criminal punishment, or evidence gathering. It is not the job of the individual, the family father, the clergyman, but the civil authority to exact revenge in God's name according to Romans 13:1-7.



Neitzche

By Bob Webster

Your line ("Never, never quit. Never, never give in.") would be adequate for my gravestone… if I ever have one. As a child, my mother drummed that into my head. Not to fear trying in life and to never, never quit. Probably the most important advice I had as a child… in addition to the mandatory "If you don't stop _____ I'll give you something to cry about!" and the ever-present "I'll teach you a lesson you'll never forget!" I often wonder in what century and by whom those famous lines were first uttered…

Every time I sit down to put something together for John the story gets a little more complicated and interesting.

So I've decided to just stick to how things are at a specific date and go with that.

The local USA Today affiliate (as does the parent USA Today) continues to deceive by focusing on "NEW CASES, NEW CASES, NEW CASES" and hospitalization and death counts. I wrote them a scathing (yet gentle and civil) rebuke not as a letter to the editor, but as a friendly letter to both reporters and editors whose email addresses I have. I took the tack, "you probably don't realize this, but…" and, of course, I know they know full well exactly what they are doing.

Their headline screamed: "New year, new record: January saw highest number of new COVID cases on Treasure Coast"

So I reminded them that this type of headline is why I cancelled my subscription (they are experiencing a cancellation epidemic of their own). I pointed out how they were misleading readers by focusing on ungrounded raw numbers that actually mean nothing … and included a snippet of my spreadsheet graphics that covered a bit of December and all of January that show cases plunging throughout the month. Deaths and hospitalizations also declined as a percentage of the associated prior three and two (respectively) weeks of new cases.

Haven't heard a thing from them since… probably because they can't understand simple arithmetic and don't know what the figures mean. But then, what could they say?

That they're domestic terrorists working for the CCP/DNC alliance that includes "big pharma"?

My favorite question to ask of people who are anxious to be (or have already been) vaccinated: "Why do you want (did you take) the experimental

Through: January 31, 2021 *Source: Florida Department of Health Data*

With nearly a 100% survival rate for those under age 65, there is no valid rationale for lockdowns, schools to be closed, and other routine events to be resumed.

By Alan Stewart

Many in the public have been sold a narrative that this virus "is everywhere" and "will kill you if you get it"… why else tolerate overly cautious restrictions (e.g., face masks that are well-known to carry greater risks than not wearing a mask). If someone has symptoms of any communicable disease, they should not be in any public environment. The responsible thing for infected people to do is self-isolate until they are cured. For an infected person to don a face mask and carry on as usual creates a real threat for others who are not infected. What is the point of requiring uninfected people to make their breathing difficult by wearing an obstruction over their mouth and nose that is likely to collect whatever viral particles may be airborne from the expiration of a virus-laden aerosol from someone who is infected even when they are wearing a face covering (no mask or face covering is capable of filtering out the invisibly small virus expelled in the aerosol of normal

Neitzche *cont. from page 16*

vaccine?"

None understand the vaccine is experimental and that they are part of a massive experiment that could shorten their days on this plane of existence.

Most (erroneously) believe that the vaccine will free them to do as they please… no masks, no social distancing, no need to worry — now they can travel freely!

Official word from the "Fauci scientists": You veel vear zee mask! You veel zocial disdance! You veel only travel vere VEE tell you too! You veel be zupjekt to zee new roolz! You veel opay!

So much for having a good reason to take this vaccine.

Most seeking the vaccine have no idea no animal testing was required for this. Nor do they realize that the companies producing it are immune from litigation should anything go wrong (like, for instance, many dying when infected by the virus they thought couldn't infect them).

Nor do they realize the last time this new type vaccine was tried (for SARS-CoV-1) it failed miserably when the animals vaccinated died after being infected by the virus in the wild.

In short, fake news keeps them ignorant, fear-mongers them into becoming part of the experiment with lies so great they spin the mind until it's too dizzy for rational process.

Most report something to the effect, "Well, I had no problem with the vaccine" as if surviving the vaccine process were the big deal. It isn't, though that isn't a 100% guarantee as some have discovered.

The big deal? Surviving a subsequent infection by the virus (or, perhaps, ANY related virus). Apparently, that part is in the fine print that never gets printed.

Worse: This new type vaccine may permanently subject the vaccinated to risk of an uncontrolled reaction to a future viral infection beyond SARS-CoV-2. All in that same fine print.

Welcome to the Brave New World… where independent thought and wholesome debate are VERBOTEN! You VEEL OPAY!

The survivors may be those who weren't so quick to "drink the Kool Ade"… this time in the form of an untested new approach to vaccines in pursuit of a level of protection they'll not have.

This is where Florida's numbers stood at the end of January: (See Chart Below)

Look at the second and fourth from the RIGHT side column of figures… as well as the right-most column.

Those under age 55 are not meaningfully threatened by this virus, with survival probability of 99.96% to 100% depending on age category.

There is zero reason to alter school schedules, activities, etc. Any teacher fearful of showing up for work can be excused if they are over age 55… the rest need to buck up and get to work… wear a mask if they actually believe it will help (it won't).

On the other hand, it's probably better for the kids to learn at home (if they can)… at least they won't be indoctrinated by a Marxist teacher. Better to be ignorant than a fool.

By comparison, in 2019 the chance a US citizen died in a traffic accident during that year was 0.011%. In Florida, those under age 35 have a greater chance of surviving this 'deadly' virus than surviving a year without dying in a traffic accident. Those 35-44 years old in Florida have about the same chance of dying from the virus as from a traffic accident. As age increases, the risk from the virus surpasses the risk of dying on the highways, about 3.5 times greater for those age 45-54; nearly 9 times greater for those age 55-64; 20.5 times greater for those age 65-74; 49 toes greater for those age 75-84; and 136 times greater for those age 85 and older. The overall chances of dying from the virus (all ages) is 11 times greater. This is due to the heavy bias toward older people having a fatal reaction to the virus as shown in the column just to the right of Deaths. 94% of all deaths from this virus in Florida were people age 55 or older. Note that the % of All Deaths column shows 0% for the first three age categories, despite the categories 5-14 and 15-24 having tallied some deaths. That's because the numbers were so small, they don't register when rounding anything below 0.5% to 0%.

Seriously, do these figures warrant widespread vaccinations in Florida for anybody under the age of 55? Given the risks involved, a practical guideline would be to only allow vaccination with this experimental vaccine for those age 55 and older provided they have multiple comorbidities. Instead, there are those who want to make the vaccine mandatory for children in public schools where the risk of death from this pandemic is virtually zero without the vaccine!

Explosive if True

cont. from page 1

The flu was called Covid and most of the 225,000 dead were dead through co-morbidities such as heart disease, cancer, diabetes, emphysema etc. and they then got the flu which further weakened their immune system and they died. I have yet to find a single viable sample of Covid 19 to work with. We at the 7 universities that did the lab tests on these 1500 samples are now suing the CDC for Covid 19 fraud. the CDC has yet to send us a single viable, isolated and purifed sample of Covid 19. If they can't or won't send us a viable sample, I say there is no Covid 19, it is fictitious. The four research papers that do describe the genomic extracts of the Covid 19 virus never were successful in isolating and purifying the samples. All the four papers written on Covid 19 only describe small bits of RNA which were only 37 to 40 base pairs long which is NOT A VIRUS. A viral genome is typically 30,000 to 40,000 base pairs.

With as bad as Covid is supposed to be all over the place, how come no one in any lab world wide has ever isolated and purified this virus in its entirety? That's because they've never really found the virus, all they've ever found was small pieces of RNA which were never identified as the virus anyway.

So what we're dealing with is just another flu strain like every year, COVID 19 does not exist and is fictitious. I believe China and the globalists orchestrated this COVID hoax (the flu disguised as a novel virus) to bring in global tyranny and a worldwide police totalitarian surveillance state, and this plot included massive election fraud to overthrow Trump.

Steve's Say *cont. from p 2*

people on the planet, these people completely embrace the goals and wishes of the satanic cabal. Justice will reign upon them shortly. Why anyone, especially people who reside on the political right attach any credibility to them at all I cannot understand. No reason exists to ever consume anything they put forth.

Most conservatives know Fox News joined the MSM ranks, but one must realize that even Newsmax, OAN and talk radio constrain themselves from getting to root truth for fear of being characterized by MSM as "kooks" or "conspiracy theorists." These formerly reliable institutions ceded whatever moral authority they had for fear of demonization. Such fragile people never deserved the title of Patriot. And all of these same comments apply to almost all GOP officeholders at both the federal and state level.

With regard to Q, the QAnons and the entire army of digital soldiers, you owe all of them your gratitude and respect. Anyone who listened to the MSM characterization of these warriors and believed any of it owes them a gigantic apology. Q is nothing more than a military intelligence board putting forth clues to a plan in play for securing the future, of which we are about to see come to full fruition shortly. These encoded messages required individuals to research on their own to try and determine their meaning. These researchers are the Anons, just regular people searching for the truth.

And for a while their existed a Qanon twitter page where the Anons shared information and findings with each other. I found an incredible amount of great info there, including the correct origin of the Wuhan virus and the real history of our genocidal bureaucratic physician Dr. Anthony Fauci, America's greatest criminal today. Anons pledged an oath to uphold the US constitution against all enemies foreign and domestic, just like all the military. Does that sound like a domestic terrorist organization, or something that promotes violence?

And Q is not some substitute for God, nor are the Anons some kind of cult. Q repeatedly proclaimed the plan to be God's plan and that God wins. I've never seen anyone posting anything or involved in the movement not acknowledging that this is God's work. And by the way, Pizzagate, the human trafficking, pedophilia and satanic rituals are for real by the demon-possessed One World Order cabal.

If I am correct in what I disclosed to you today, by the March edition the Biden facade fades into historical anomaly and Trump gets restored to his rightful place as duly elected president and commander-in-chief. Maybe the MSM gets interrogated and taken down for its treasonous role in attempting to destroy our country.

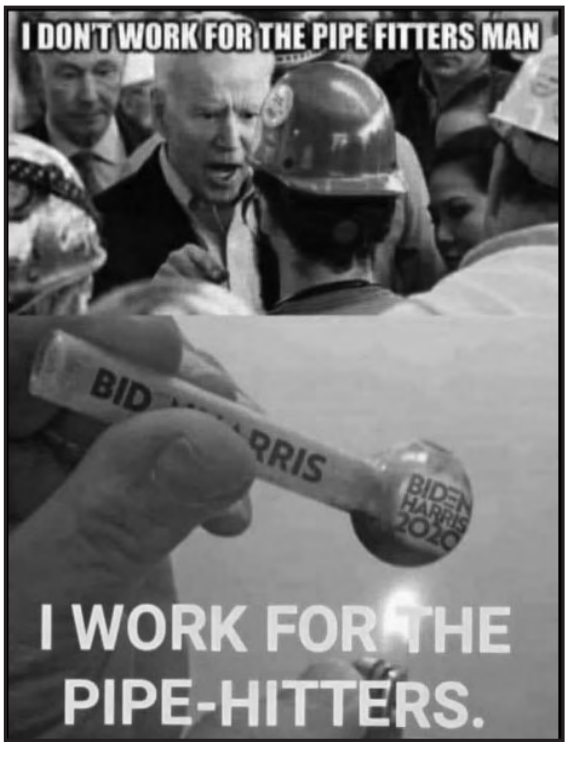
Otherwise, I'll see you in the State Fair Gulag.

no valid rationale

cont. from page 16

breathing)?

It's like carrying an umbrella with holes in it during rain and thinking that it will provide protection from getting wet. With a virus, it only takes one to become infected. If the immune system is not compromised, a normal person's immune system will fight off the virus, particularly if they've taken steps in their diet to assure they are keeping their immune system boosted whenever a widespread infectious disease is present. Those with serious lung problems and several comorbidities need to isolate and take extra precautions. But there is no valid rationale for requiring the general population to act as if they are highly susceptible to a virus whose lethality targets those 75 and older, and is most lethal with those age 85 and older.



Global Warming Is a Lie, Scientist Reveals

By Robert A. Kieckhefer

I am in Florida on a sunny day and thought I would share some science with those of you in subzero weather praying for global warming!

I hope this attached article is the beginning of someone telling the truth about global warming but don't count on it.

The earth has been warming for 12,000 years since the end of the ice age.

The oceans have risen pretty consistently over that time period. I don't think the global warmers argue with that fact.

Before that, the earth cooled and dinosaurs that were living in Montana either died or moved south.

The level of CO2 was probably higher during the ice age because plant life was dormant year round.

The level of CO2 varies every year from 300 ppm (parts per million) in the late summer to a max of 450 ppm in the late winter.

Plant life eats CO2. It is called photosynthesis. There ain't no photosynthesis going on in the winter, plants aren't eating CO2 and so CO2 levels rise until the plants come back to life. Pretty simple even for Al Gore to understand.

Bloomberg only record CO2 levels going up during the fall and winter. That is how Democrats document their arguments with only half the truth.

When the politicians say that we are not producing as much CO2 as we did a few years ago, I would like to know how that is possible.

China and India are building coal fired power plants, more cars are on the road and 8 billion people are still exhaling CO2.

We as a world are using more energy and about 98% comes from carbon. John Kerry produces more CO2 than entire villages in Africa.

The whole fairytale that CO2 is causing global warming is bullshit. The earth has been warming for 12,000 years which is longer than AOC has been a bartender. 2000 years ago we did not have a billion people on the earth and there were no cars or power plants.

The earth stilled warmed up without Al Gore's help or Bloomberg record keeping. The earth might still be warming but we have nothing to do with it. The politicians want to create fear and they want to control and tax energy. It is that simple.

If the earth warms up, plant life is eating CO2 for slightly longer periods of time. CO2 levels drop. If the earth cools off, plant life is dormant longer and CO2 levels go up. The forces of nature are in balance. It is called equilibrium.

If you want to be afraid of something, be afraid of another ice age because it is hard to grow food for 8 billion people in the snow.

Don't tell the Democrats or we will have global cooling to worry about too!

$22 Billion Scam

cont. from page 1

agent, slams a 164-page document in the middle of the table.

This document, you soon find out, contains damning evidence that a network of politicians, corporations, and scientists have conspired together to promote the fear of "global warming" . . . despite evidence clearly stating no such "global warming" exists.

The motive: $22 billion per year.

To be clear . . . that's $22 billion of taxpayers' money . . . the amount that our government pays to stop the "global warming" epidemic.

That comes out to $41,856 every minute.

Or, to put it in perspective, that is twice as much as what our government spends on securing our borders.

Then, imagine this top U.S. intelligence agent turning to you, and asking for you to join him on a mission to out those involved in the "global warming" lie.

Doing so would cost a lot of money, a lot of time, and could cost you your reputation. But, pretending you never saw the document, and carrying on with your life, would allow the scandal to continue and actually put lives at risk.

So, imagine if you were at that table, and the scenario I just described happened to you.

How Would You Respond?

My name is Tom Luongo, and I've recently had this exact experience.

In the following few pages, I am going to show you the alarming research in the document that was laid before me that night in Palm Beach.

I will tell you why this network of politicians, corporations, and scientists tried to hide this research . . . and how you can be part of a newly formed initiative with the aim of getting this research into the hands of every American.

This research proves, once and for all, that "global warming" is a sham . . . a sham perpetuated by a network of dirty government officials, greedy corporations, and bought-off "scientific" organizations.

How you respond will be up to you.

I can guarantee you one thing: After reading the next few pages, you will never look at government officials the same way . . . you will never trust what you hear in the media again . . . in fact, you will become skeptical of any and all authority figures going forward.

It's unfortunate, but the betrayal you're going to discover today runs very deep, and revealing the truth about "global warming" comes with great risk.

As a scientist for over 20 years, I've always upheld the truth.

I've worked with the University of Florida to do some amazing things . . . I've helped make crop yields more productive for third world countries . . . I helped create an intermetallic coating for gun barrels that dropped maintenance requirements on firearms by half . . . and I've helped cure diseases.

I have seen a lot of research go across my desk. But none of it can compare to the 164-page document that landed in front of me that night in Palm Beach.

That's why I'm going to lay the facts from this document before you today, and then I'm going to ask that you join me, and the man who composed this document, on our mission to defund the "global warming" sham . . .

All it will take is a click of your mouse.

With one click, you're going to put more momentum behind what I hope to be the largest effort . . . ever . . . to annihilate the "global warming" lie and defund the government's multibillion-dollar spending frenzy to keep it alive.

Now, before we begin, I ask that you excuse any "rough" elements in this letter. What I'm sharing with you today is so urgent that I've made a huge effort to get the research in this 164-page document available to you as quickly as possible . . .

With President Obama's recent speech about getting tougher on "global warming" issues I think it's critical that we don't waste a minute in getting this information out.

The sooner we get this information into the hands of the public . . . your hands . . . the more informed voters will be when they cast their ballots.

First, you should know who put this document in my hands — a man whom Al Gore is personally attacking . . .

His Name Is John Casey.

John is a former White House space program adviser, consultant to NASA headquarters, and space shuttle engineer. He is now one of America's most successful climate change researchers and climate prediction experts.

In short, John is the very definition of a government insider. He spent 35 years conducting classified research, examining confidential documents, and directing critical scientific programs.

For example: In 1986, when the space shuttle Challenger tragically exploded, killing seven crew members, John testified before Congress on the cause of the accident. After the testimony, Congress instructed NASA headquarters to bring John in to chair a special internal investigation into why these critical systems failed.

Now, keep that in mind for a moment: Capitol Hill and NASA trusted John's detailed analytical approach and his engineering credentials so much they asked him to investigate the cause of one of our nation's greatest tragedies.

After 35 years of serving his country, John quietly retired in Florida. He planned on living peacefully, spending time with his wife, children, and grandkids.

But on one April afternoon in 2007, John made an "unfortunate" discovery that changed everything.

The discovery would ultimately lead him to abandon his plans for retirement in order to support a cause that was bigger than himself . . . that was bigger than anything he had done in his 35-year career.

In fact, this discovery would result in him becoming hated by all those who once heralded him as their friend and adviser.

After this outright rejection, John realized that despite his science not changing, despite the thousands of pages of irrefutable data, and despite millions of lives at risk . . . he was alone.

The responsibility of letting the world know about this discovery rested solely on his shoulders, and those who would listen to him.

Indeed, what he has to say goes contrary to everything you have been told about "climate change."

I initially rejected what John had to tell me. But when he showed me what was in his 164-page document, I couldn't argue with him.

Facts are facts.

What John discovered that fateful afternoon was . . .

'Global Warming' Is an Outright Sham

You see, John found evidence — buried right in the government's own environmental studies — that destroys their argument for "global warming."

Using their own data, John has proven, once and for all, "global warming" is a sham. And perhaps the most expensive — and lethal — sham in American history.

A sham that our government spends $22 billion a year financing. Think about that: our government spends $22 billion a year financing "global warming" initiatives.

Again, that's almost double what the government spends on securing our borders.

Or, to break it down to real numbers . . .

That's $41,856 Every Minute!

But this is just the tip of the iceberg.

John's research also uncovered a different looming cataclysm that will ruin every nation that's not prepared . . . a calamity that has been accelerating for the last 17 years . . . and brewing for over 200 years.

This impending catastrophe is as natural as the sun rising in the east and setting in the west. And just as unstoppable.

I'm talking about a tectonic shift in the world's economies that will . . .

- Send oil to over $300 a barrel
- Cause food prices to triple and in some places make food completely unavailable
- Lead to violence erupting in the streets of your suburban neighborhood
- Cause governments to topple, nations to descend into chaos, and international wars to

About Those 'Green Energy' Unicorns... Do they exist??

By Michael Walsh

You think those baby unicorns grow on trees? Better think again. "Green" energy, in fact, comes with a very high price tag. as this report from the Manhattan Institute makes clear:

As policymakers have shifted focus from pandemic challenges to economic recovery, infrastructure plans are once more being actively discussed, including those relating to energy. Green energy advocates are doubling down on pressure to continue, or even increase, the use of wind, solar power, and electric cars. Left out of the discussion is any serious consideration of the broad environmental and supply-chain implications of renewable energy.

As I explored in a previous paper, "The New Energy Economy: An Exercise in Magical Thinking,"[1] many enthusiasts believe things that are not possible when it comes to the physics of fueling society, not least the magical belief that "clean-tech" energy can echo the velocity of the progress of digital technologies. It cannot.

This paper turns to a different reality: all energy-producing machinery must be fabricated from materials extracted from the earth. No energy system, in short, is actually "renewable," since all machines require the continual mining and processing of millions of tons of primary materials and the disposal of hardware that inevitably wears out. Compared with hydrocarbons, green machines entail, on average, a 10-fold increase in the quantities of materials extracted and processed to produce the same amount of energy.

It never seems to occur to the Reality-Based Community that in the real world one must think past "A, therefore B" to include many others letters of the alphabet as the variables pile up. In other words, if you think that by plugging your electric vehicle into a handy wall socket you've just put the fossil fuel and ancillary industries out of business while otherwise continuing your lifestyle and saving money to boot, think again.

As Mills points out, among the reality of "green energy" are:

• Building wind turbines and solar panels to generate electricity, as well as batteries to fuel electric vehicles, requires, on average, more than 10 times the quantity of materials, compared with building machines using hydrocarbons to deliver the same amount of energy to society.

• A single electric car contains more cobalt than 1,000 smartphone batteries; the blades on a single wind turbine have more plastic than 5 million smartphones; and a solar array that can power one data center uses more glass than 50 million phones.

• Replacing hydrocarbons with green machines under current plans—never mind aspirations for far greater expansion—will vastly increase the mining of various critical minerals around the world. For example, a single electric car battery weighing 1,000 pounds requires extracting and processing some 500,000 pounds of materials. Averaged over a battery's life, each mile of driving an electric car "consumes" five pounds of earth. Using an internal combustion engine consumes about 0.2 pounds of liquids per mile.

• Oil, natural gas, and coal are needed to produce the concrete, steel, plastics, and purified minerals used to build green machines. The energy equivalent of 100 barrels of oil is used in the processes to fabricate a single battery that can store the equivalent of one barrel of oil.

• By 2050, with current plans, the quantity of worn-out solar panels—much of it nonrecyclable—will constitute double the tonnage of all today's global plastic waste, along with over 3 million tons per year of unrecyclable plastics from worn-out wind turbine blades. By 2030, more than 10 million tons per year of batteries will become garbage.

Yeah, well, surely they've thought this whole "green" thing, right? Sadly, no. For not only will the "green movement" be hideously expensive and result in no appreciably better ecological ends, the extraction of its necessary materials -- for even unicorns must come from somewhere -- will also cost more and require even more pollution than current fossil fuels do.

For example, replacing the energy output from a single 100-MW natural gas-fired turbine, itself about the size of a residential house (producing enough electricity for 75,000 homes), requires at least 20 wind turbines, each one about the size of the Washington Monument, occupying some 10 square miles of land.[4]

Building those wind machines consumes enormous quantities of conventional materials, including concrete, steel, and fiberglass, along with less common materials, including "rare earth" elements such as dysprosium. A World Bank study noted what every mining engineer knows: "[Technologies assumed to populate the clean energy shift … are in fact significantly more material intensive in their composition than

$22 Billion Scam

cont. from page 18

break out.

In the 164-page document John handed me, he went to great lengths to explain exactly how serious this crisis will be. It's going to be worsened by the fact our politicians are bullheadedly ignoring it.

The result will be every American being blindsided . . . unable to see it coming because of Al Gore and his cronies preaching false dogma.

As I said before, I didn't believe it either until I saw the evidence in John's dossier. And even then, it took me hours of talking to John afterward to digest it.

John's research has now been corroborated by 17 independent scientific individuals and organizations. These are some of the top scientific minds in the field of climate science . . . in the world.

But That Hasn't Stopped the Hostile Attacks...

When John retired, he had many allies and supporters in the government.

However, when he turned that same analytical approach Washington loved so much on Washington itself . . .

He became, in essence, their "public enemy No. 1."

Let me explain.

As mentioned, in April of 2007, already into a comfortable retirement, John began examining some solar and environmental physics research (these are his hobbies).

The "unfortunate" discovery he made would make any honest American sick to the stomach. John immediately took the evidence and called his colleagues and fellow government insiders to alert them to the situation.

He even sent notices to the White House warning them of the crisis.

The response?

Silence.

Silence, and then rejection.

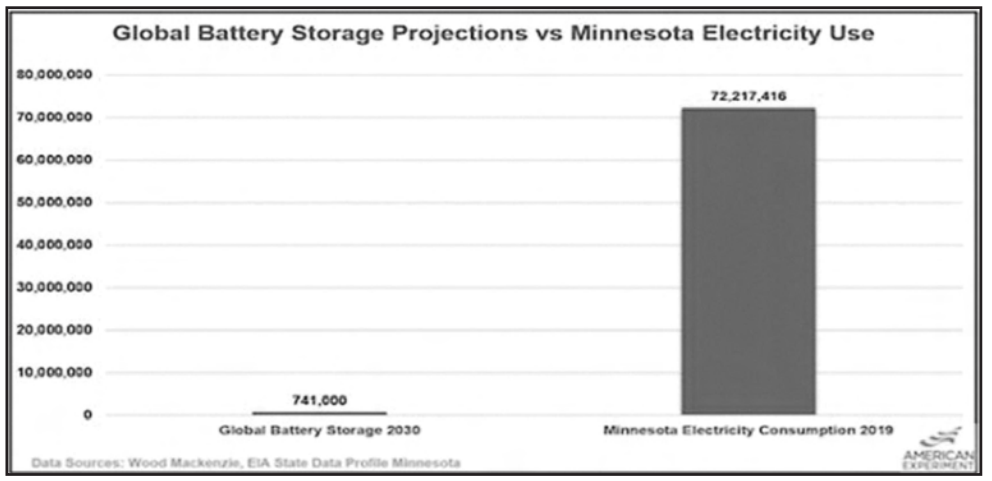
Wind and Solar Energy Don't Work

Leftists fantasize that before long, we can dispense with all reliable energy sources–coal, natural gas, nuclear, even hydro–and run our society entirely on wind and solar, two forms of energy that have been obsolete for 150 years.

How can this be, since wind turbines only produce electricity when the wind is blowing sufficiently, which is around 40% of the time, and solar only works when the sun is shining and the panels are not covered in ice and snow–in a northern climate, something like 18% of the time? Obviously the Greenies have a problem. Today, their problem is solved by building natural gas plants that carry the load when wind and solar are AWOL–which is to say, a large majority of the time. Of course, the natural gas plants are dispatchable, which means they can produce energy reliably, at will, 24/7. Which raises the obvious question: if we have to build fully-capable natural gas plants to make wind and solar sort-of work, some of the time, what the heck to we need the wind and solar for?



The truthful answer to that question has nothing to do with the laws of physics, and everything to do with the laws of money. But the Left has another answer: batteries! It looks forward to the day when batteries will store the output of wind turbines and solar panels and thereby turn unreliable, intermittent energy into electricity that you can count on to turn on your lights when you flip the switch.

At American Experiment.org, my colleague Isaac Orr demolishes the Green New Deal fantasy. One basic problem is that wind turbines don't work when the weather gets cold, which can be fatal in the North, especially when we are experiencing a brutal cold snap:

Temperatures are below zero in many parts of the state, but wind energy is missing in action.

According to data from the regional grid operator, the wind is providing just 1 percent of the current electricity on the grid, and solar is providing just 0.31 percent. Coal currently accounts for 55 percent of generation, natural gas accounts for 28 percent, and nuclear accounts for 14 percent.

Not only is wind not producing much electricity, but it is also producing only a small fraction of its potential output. There are 22,000 megawatts (MW) of wind capacity installed on the regional grid, but these wind turbines are only producing 1,055 MW of electricity. In other words, wind turbines are only producing 4.8 percent of their potential output. Temperatures are below zero in many parts of the state, but wind energy is missing in action.

As Isaac has explained elsewhere, the truth is even worse than that. When it gets cold, not only are wind turbines shut down so they produce no electricity, they also need to be kept warm. So in cold weather, wind turbines are consumers of electricity, not producers of electricity.

This looks bleak for the Greenies. But their deus ex machina is batteries. The battle may appear lost, but vast (infinite) supplies of lithium batteries will somehow appear to save the day. Where to we go to buy those batteries? Well, they don't actually exist. But someday they will! Isaac writes:

A recent analysis by the consulting firm Wood Mackenzie estimates there will be about 741 gigawatt-hours of battery storage in 2030. This amount equates to 741,000 megawatt-hours (MWh). These may sound like big numbers, but the figures are actually damning evidence that battery storage is an entirely unserious energy proposal.

In 2019, the state of Minnesota consumed 72 million megawatt-hours of electricity. This means the amount of battery storage expected to be in existence for the entire world would be the equivalent of just one percent of Minnesota's annual energy consumption.

But that's not all!

Not only will the needed battery storage not exist, but it's also incredibly expensive.

Current cost estimates for battery storage are about $250 per kilowatt-hour, which equates to a cost of $250,000 per megawatt-hour. This means the cost of all the expected battery storage in the world (741,000 MWh by 2030) would cost $185 billion to build, and this doesn't even begin to include the cost of building the wind turbines and solar panels needed to charge the batteries! or provide new trasnmission lines to move the power.

More fundamentally, that $185 billion is just to build batteries that can store one percent of Minnesota's electricity needs. (For comparison, Minnesota's GDP is $339 billion.) Where the remaining 99% of Minnesota's needs, and the needs of the rest of the planet, will come from, is anyone's guess. And you can easily do the math and see that no such scheme is even remotely possible, let alone affordable.

Add in the fact that battery storage only lasts for 10 years, according to the National Renewable Energy Laboratory, and it becomes blindingly obvious that we should instead be focusing on building new nuclear power plants that will come online faster and produce much more electricity for a much lower cost.

That recommendation is beyond question if the goal is to provide ordinary Americans with cheap and reliable energy without emitting carbon dioxide. But that is not the goal of environmentalists or of the Green New Deal. To be blunt, they couldn't care less whether peons have reliable access to energy, or how much they have to pay for it. A great deal of money stands to be made by green-allied companies and utilities. Why? Because the peons will be paying so much. When this sort of payoff is in the offing, science will not be allowed to get in the way

Subject: Two Feb 2021 Articles, if you can fit them
Date: January 25, 2021 at 9:08 AM
To: alchem1@earthlink.net

Steve:

Two articles attached. If you can't publish two, then the article on section 230, while not my usual type of article, is very essential to address Big Tech's takedown of Parler and conservative voices. It talks about the Supreme Court precedent (in the 40s - 50s) that held Congress cannot empower private companies to regulate other private companies. That is exactly what Big Tech did. Using the congressional exemption from liability for removing objectionable content, Big Tech shut down conservative voices. Hopefully, it can be fit in.

My February article is also attached. It is on Texas v. PA, a case that is a disgrace. How the Sup Ct could dismiss Texas for lack of standing is reprehensible. States always have standing as protectors of citizens; that has been the position of the Supreme Court until now. By ruling on standing, the court indicates some states (liberal states that violate the constitution) have more standing in the union than conservative states, e.g. Texas, that follow the rules.

It will be some dark times ahead. Your magazine will be really essential going forward,

In DC, it is a total shutdown and 7000 Nat Guards remain protecting the Capitol. 7000 is more troops than we have in Afgan & Iraq. Corporations have abandoned all conservative organizations and are withdrawing from membership. My old organization, the U.S. Chamber, now supports the re-entry of the Paris Accord and eliminating carbon from society. It supports most of the Green New Deal. Publishers will not publish conservative ideas. You may be one of the last remaining bulwarks. Your paper is more important than ever,

Best,
Bill

Supreme Court Rules Some States More Equal Than Texas

By William L. Kovacs

January 6, 2021, the electoral college elects Joe Biden the 46th President of the United States. The Republic still stands, although worse for wear due to the siege of the Capitol and the fact one-third of citizens lack trust in the election results. Polarization will intensify dramatically due to "Big Tech's" purge of conservatives on social media and its de facto synchronized shutdown of Parler. If the Democrats allow Big Tech's communication blackout of conservatives to continue, the Achilles Heel of democracy will be the U.S. Supreme Court's decision in Texas v Pennsylvania that some states have more standing in the union than others, which makes some states more equal than others. This decision eliminates the ability of states and their attorneys general to protect citizens, even citizens that move to states seeking freedom from oppression in other states.

By failing to provide any explanation for denying Texas an opportunity to prove its citizens were denied the same voting rights as afforded other states, the Supreme Court took away the right of a state to argue for its equality in the union, at a time when it needed to instill trust in government.

The U.S. Supreme Court's summary dismissal, for lack of standing, of the lawsuit brought by Texas and supported by 18 other states, to overturn the asserted fraudulent election practices in PA, WI, MI, and GA, is inconsistent with its seminal decision on the standing of states. In Massachusetts v. EPA, the court ruled "…States are not normal litigants' for the purposes of invoking federal jurisdiction." States "… retain the dignity…of sovereignty… [and are] entitled to special solicitude in our standing analysis."

More troubling, however, by refusing to explain its decision, the court misleads the American people on the constitutional responsibilities of state legislatures and Congress in the electoral process.

Before getting to the substance, however, media gossip suggests there may be a simple explanation for its actions? Is chief justice Roberts being influenced by the liberal media's warning of damage to the court? Is he influenced by the "unidentified mobs" who threaten to riot? Or does he vote, however necessary, to avoid any suspicion of voting ideologically? As one commentator "freely admit[s]" he writes to pressure Roberts to acquiesce to threats. The fact that opinion writers believe Roberts is influenced by criticism creates the very distrust of the judiciary the chief justice wants to avoid. If these rumors are even slightly true, Democracy is at great risk.

An alternative constitutional approach the court could have taken without helping Trump, if that was its concern, would be to dismiss the case as a "political question." The Supreme Court could have avoided deciding the controversy by explaining the constitution and federal statutes commit "the issue to a coordinate political department," i.e., state legislatures and Congress. By taking this approach the court would have clearly informed the other branches of government it was their responsibility to resolve the conflict as guardians of the Constitution. Could it be the Supreme Court relied on "standing" rather than "political question" to maintain the appearance of an all-powerful court, rather than acknowledging the limits of its power? According to Professor Tokaji, there are "…no federal laws allowing judicial contest proceedings over disputed federal elections."

Another failure of the U.S. Supreme Court was a complete lack of consistency in the handling of presidential election disputes.

The U.S. Supreme Court decided two disputed presidential elections (2000 and 2020) in diametrically different ways. In the 2000 electoral dispute in Bush v. Gore, Florida's 25 electoral votes were in dispute over the validity of incompletely punched paper ballots. These ballots were being counted differently by different election officials. The U.S. Supreme Court directly usurped Florida law by blocking the Florida Supreme Court's order authorizing a recount. It also found the Florida Supreme court's order standardless, a violation of the Constitution's equal protection clause. The court noted, "Having once granted the right to vote on equal terms, the state may not, by later arbitrary and disparate treatment, value one person's vote over that of another."

In 2020, Texas petitioned the U.S. Supreme Court alleging that the four contested states failed to provide equal protection to voters and electors in other states by counting votes in a manner contrary to the state legislatures as directed by the constitution. If the equal protection clause protects the votes of Florida citizens in different counties, as in Bush v Gore, it is essential that equal protection applies to the votes of presidential electors in different states, since it is the combined weight of their votes that elect the president. Simply, each elector's vote must be equal to the vote of electors in other states, otherwise, the votes of electors from different states have different weight in electing our president.

The electoral college consists of 538 electors. To win the presidency, the candidate must receive 270 electoral votes. Citizens do not vote for president, state electors do. Most state legislatures select electors based on the winner of the popular vote in their state.

Using Pennsylvania as an example, its legislature allowed all votes to be counted if the votes were received by 8 pm on election day. Contrary to state law, state election officials counted votes received for three days after the election. The petitioning states like Texas counted only votes cast on or before election day. Texas followed the intent of its legislature. The four defendant states followed the rules of election officials and state courts. This disparate process raises equal protection concerns.

Immediately after the Supreme Court's decision, Colonel West, chairman of the Texas Republican Party, suggested: "…law-abiding states should bond together and form a Union of states that will abide by the constitution." His comment acutely captures the fact one set of states operates according to state legislative intent while others disregard state legislative intent, a distinction the Supreme Court failed to recognize.

West's suggestion, creating a compact of states that follow constitutional directives, is sanctioned by the Compacts Clause, Article I, section10, of our Constitution. Presently, a group of 15 Democrat states is forming the National Popular Vote Interstate Compact to require all states in the compact to cast their electoral votes for the winner of the national popular vote, notwithstanding the winner of the election in any specific state. The Democrats' compact, when ratified by states having 270 electoral votes, would elect presidents by the national popular vote, a radical change to the current electoral college which assigns electoral votes by the winner of specific states.

By ruling states have no standing to challenge the different standards for selecting electors in the respective states, the U.S. Supreme Court sanctions an electoral process that allows electors from different states to cast their votes for president based on different standards, some established by the state legislature, others by unelected election officials and perhaps soon, by interstate compact.

Ensuring the votes of electors in the respective states are all equal when cast is essential to electing a president since citizens can only vote for electors.

How does a Republic continue governing itself if some states are more equal than others?

William L. Kovacs, author of Reform the Kakistocracy: Rule by the Least Able or Least Principled Citizens and The Left's Little Red Book on Forming a Green New Republic. Also, former senior vice president, U.S. Chamber of Commerce.

WISCONSIN INSTITUTE FOR LAW & LIBERTY

Judge Orders Wisconsin DNR to Hold February 2021 Gray Wolf Hunt

The News: Jefferson County Circuit Court Judge Bennett J. Brantmeier issued a writ of mandamus, Thursday, requiring the Wisconsin Department of Natural Resources (DNR) to hold a gray wolf hunt in February 2021. Judge Brantmeier found that the Wisconsin DNR violated state law by refusing to schedule a winter 2021 gray wolf hunt when the gray wolf was delisted from the Endangered Species Act on January 4, 2021.

WILL sued the Wisconsin DNR on February 2, 2021 arguing that state law clearly directed DNR to conduct a gray wolf hunt in winter 2021.

The Quotes: WILL Deputy Counsel, Anthony LoCoco, said, "We are pleased the court recognized that the Wisconsin DNR ignored state law by refusing to undertake its obligation to hold a winter 2021 wolf hunt. It is not up to state agencies to decide when to follow the directives in state law."

"This is a historic victory for the Wisconsin hunter and our constitutionally protected right to hunt and manage our wildlife here in Wisconsin," said Luke Hilgemann, President of Hunter Nation. "Today's ruling solidifies the rule of law and finally provides clear direction to the Evers administration to move full speed ahead with our statutorily required wolf hunt. Any attempts by the Evers administration to overturn this ruling are a direct assault to the constitutional rights of Wisconsin hunters."

Background: The United States Fish and Wildlife Service proposed removing the gray wolf from protection under the Endangered Species Act in March 2019. On November 3, 2020, US Fish and Wildlife promulgated a final rule to delist the gray wolf effective January 4, 2021.

Wisconsin state law is clear that if the gray wolf is not protected by the Endangered Species Act, the Wisconsin DNR "shall allow the hunting and trapping of wolves." The law further states that DNR must "establish a single annual open season for both hunting and trapping wolves that begins on the first Saturday in November of each year and ends on the last day of February of the following year."

But the Wisconsin DNR, despite years of advance warning and months to prepare for a January 2021 delisting of the gray wolf, refused to permit the hunting and trapping of wolves in January and February of 2021.

WILL represents Hunter Nation President and CEO, Luke Hilgemann, and Hunter Nation, a non-profit organization dedicated to preserving and protecting America's hunting heritage and the right to hunt.

WILL's lawsuit alleges DNR's decision to forgo a gray wolf hunt until November 2021 violates state law and the Wisconsin state constitution's guarantee of a right to hunt. Once the gray wolf was delisted on January 4, Wisconsin DNR had an obligation to comply with state law that permits the trapping and hunting of gray wolves for a season between November and February.

Judge Brantmeier issued a writ of mandamus ordering the Wisconsin DNR to hold a gray wolf hunt in February 2021 in accordance with state law. Judge Brantmeier also ordered a hearing on February 16 to update the court on DNR's progress in following the writ of mandamus.

Ashli Babbitt

"And the king answered the people roughly, and forsook the old men's counsel that they gave him;" I Kings 12:13

By Riley J. Hood—Milwaukee County Constitution Party

According to the New York Times, "At the front of that crowd is the small figure of Ms. Babbitt, wearing snow boots, jeans, and a Trump flag wrapped around her neck like a cape." The NYT continues, "Go! Go! she shouts, and then two men hoist her up to the rim of a broken window. As she sticks her head through the frame, a Capitol Police officer in plain clothes fires a shot, and she falls back into the crowd. Blood starts pouring from her mouth."

I know not to skyline myself, but this is ridiculous. In my opinion, these guys weren't terrorists, they weren't even insurgents, they were demonstrators and protesters. They weren't planting IED's they were carrying flags. Having participated in many a pro-life rescue, I know the situation can change quickly, depending on the temperament of the officers on the scene. Some patriots started to riot. Still, they were brave. Misguided? Absolutely, by idiots who made up ding-dong posts on the internet.

Now, because Ashli's life doesn't matter, she is being condemned in the court of public opinion. She was born Ashli Witthoeft, in Lakeside CA, in 1985. She served in the Air Force for 14 years. The NYT reports in a greasy undertone, "Life after the military was not easy. After briefly working security at a nuclear power plant, she was struggling to keep a pool-supply company afloat." Then the NYT gives their opinion, "Her social media feed was a torrent of messages celebrating President Trump; Q-Anon conspiracy theories; and tirades against immigration, drugs and Democratic leaders in California." She was divorced and remarried. She had a restraining order against her. She defaulted on a loan. (Marin Luther King was a serial adulterer, in the pulpit; but his socialism ameliorates his lack of morals. No such consideration for Ashli, the same media that cries crocodile tears over PTSD and homeless veterans, hates her for her opinions.)

Ashli was right about some things, the poster on her company's door said, "mask free autonomous zone, better known as America." She was right about Trump being a better man than Biden. Her brother (Age 32) commented, "My sister was 35 and served 14 years, to me that's the majority of your conscious adult life. If you feel like you gave the majority of your life to your country and you're not being listened to, that is a hard pill to swallow. That's why she was upset." Ashli's husband said, "She loved her country and she was doing what she thought was right to support her country, joining up with like-minded people that also love their president and their country." I would dare say, if

Michigan Ammo Maker: No Bullets For Biden Voters

By Cam Edwards

Ammunition is a precious commodity these days, but gun owners who cast their vote for Democrat Joe Biden shouldn't expect to find anything available from Michigan-based manufacturer Fenix Ammunition. The company is still producing ammo every day, but they're also giving the cold shoulder to Biden voters by declaring them unwanted and unwelcome customers.

The ammo maker elaborated on its position in a series of tweets on Thursday, explaining that, while they're perfectly willing to have a conversation with those who voted for Biden, they're not interested in doing business with them.

First question – are we serious?

Yes, we are serious. Joe Biden ran on a campaign built on the most radical gun control platform a major party candidate has ever had, including banning the online sale of ammunition. Essentially, a plan to bankrupt our company.

— Fenix "Kulak" Ammunition (@FenixAmmunition) February 11, 2021

Fact-check: True. Joe Biden's campaign website clearly states that Biden plans to "end the online sale of firearms and ammunitions. Biden will enact legislation to prohibit all online sales of firearms, ammunition, kits, and gun parts."

We have no problem talking to Biden voters and educating them on what they did, but they have to be willing to acknowledge their ignorance at the very least. We're not going to sit here and debate with you.

We're a 2A company and these are our first principles.

— Fenix "Kulak" Ammunition (@FenixAmmunition) February 11, 2021

With demand for ammo far outstripping supply, Fenix Ammunition can easily afford to say "no thanks" to any Biden supporter wanting to buy their bullets, but I believe them when they say this is about first principles, and even if there was a financial burden to the company for sticking to this position, I think they'd do so.

Owner Justin Nazaroff is also sincere about talking to those Biden voters who are upset about the company's policy. He says he's had several conversations with would-be customers to explain where he's coming from, but he's not changing his mind on the issue. You don't have to have voted for Donald Trump to buy your Fenix Ammunition, but if you voted for Joe Biden they don't want your money.

Now, any Biden supporter who really wants to get their hands on some 9mm couid theoretically do so, as long as they're willing to lie about who they voted for. It's just a matter of checking a box on the Fenix Ammunition website, after all. The company's not going to dig into voting records. Once they've agreed to the terms of service, however, they're going to have be pretty quick, because Fenix is selling out just as fast as they're able to produce their product.

100,000 9mm 115gr gone in 2 minutes.
100,000 9mm 147gr gone in 3 minutes.
100,000 9mm 124gr gone in 6 minutes.
See you in two weeks.

— Fenix "Kulak" Ammunition (@FenixAmmunition) February 11, 2021

I saw someone on Twitter earlier this week wondering if the ammo shortage was the result of some government conspiracy to buy up all of the ammo. The answer is no.

What's happening is simple: we had a historic run on firearms and ammunition beginning last March that has continued almost unabated ever since, and the industry simply hasn't been able to keep up with demand. The National Shooting Sports Foundation estimates that nearly 9-million Americans became gun owners last year, and I'm guessing that 99% of them bought ammo when they purchased their first firearm. That, of course, is in addition to the millions of existing gun owners who've been stocking up when they can find a box or two on the shelves, even if they've already got a good supply at home.

No matter who you voted for last November, you're probably going to be looking high and low to get ahold of any ammunition for the foreseeable future. Everyone I've spoken with in the firearms industry expects that demand will remain high for at least the next few months, and with Biden set to move on his gun ban plans in the next few weeks according to press secretary Jen Psaki, I think we're going to see another surge in interest on the part of Americans; both current gun owners and those prodded off the fence by the Democrats' attempt to curb their Second Amendment rights.

As for those gun owners, new and old, who cast their vote for Joe Biden; they may have had very good reasons in their mind, but they're going to be living with the consequences when it comes to being able to protect themselves and their families. Not only in terms of the anti-gun legislation, regulations, and executive actions coming from the administration itself, but also in terms of the responding increased interest in buying, keeping, and bearing arms. That will keep store shelves bare and supplies of common calibers scarce even if Biden's bills get tied up in the Senate.

One Nation Under God

Study suggests abortion pill complications are underreported, and ERs are managing the majority

By Carole Novielli

Abortion pill clients experiencing a complication are more likely to receive care from an emergency center than the abortion facility where they obtained the pills, according to an analysis of adverse events reports (AERs) submitted to the Food and Drug Administration (FDA) by abortion pill manufacturer Danco.

A team of over 30 board certified physicians spent three years reviewing thousands of pages of AERs and discovered glaring deficiencies in reporting on abortion pill complications and deaths. They also found that more than 60% of the surgeries due to abortion pill complications were not handled by the abortion facility, increasing the potential for large amounts of underreported complications.

Published by Issues in Law & Medicine, "Deaths and Severe Adverse Events after the use of Mifepristone as an Abortifacient from September 2000 to February 2019," sheds doubt on whether deaths and adverse events are being properly tracked. The authors of the study included researchers from the American Association of Pro-Life Obstetricians and Gynecologists (AAPLOG). "[T]he analysis of the AERs revealed glaring deficiencies… Throughout the reports, there was also a lack of detail and many patients who were simply 'lost to follow-up,'" the authors wrote.

Due to the dangers posed by the abortion pill, the FDA put in place a safety system called REMS. While anyone can submit an AER, the FDA currently requires AERs on the abortion pill (Mifeprex or mifepristone) to be submitted by Danco Laboratories, Inc. or by the abortion pill's generic manufacturer, GenBioPro.

More ERs are treating complications than abortionists, which means complications may go unreported

The study found a greater percentage of emergency rooms were treating abortion pill complications than abortion facilities. And, since abortion pill complications are only reported to FDA once the prescriber (abortion facility) or Danco becomes aware, it is likely many complications are falling through the cracks unreported. Interestingly, Live Action News has documented how the abortion industry has advised women to present to ERs claiming miscarriage if they experience abortion pill complications.

Equally as troubling is that there is no federal mandate to report abortion-related complications across all 50 states.

AAPLOG's executive director Dr. Donna Harrison and her team found that less than half of the women who experienced a complication received follow-up care from their abortion providers. Dr. Harrison said the AER reports indicated that "[m]ost of the time the women had to resort to the ER to get their care. And often it was after multiple visits to the abortion clinic."

Reports suggested abortionists were often unaware of complications unless women returned to the abortion facility. As such, they would be unlikely to file reports in those instances.

Abortion pill clients experiencing a complication are more likely to receive care from an emergency center than the abortion facility where they obtained the pills, according to an analysis of adverse events reports (AERs) submitted to the Food and Drug Administration (FDA) by abortion pill manufacturer Danco.

Catholic University of America chaplain pressures students to cancel Abby Johnson speech

Catholic University of America (CUA) chaplain Fr. Jude DeAngelo OFMConv has come under fire after reportedly pressuring the university's Students for Life chapter to cancel an event earlier this week with pro-life activist Abby Johnson.

"Cardinals for Life decided to cave to liberal pressure and cancel the event," Johnson said in a Facebook post earlier this week, extending her sympathies to "poor students" "who are taking the heat of these cafeteria 'Catholics.'"

Johnson, who was originally invited by Cardinals for Life two years ago, confirmed that CUA College Republicans ended up hosting the event, which went forward as planned on Tuesday.

Cardinals for Life members have spoken out in recent days about the pressure campaign launched by Fr. Jude and Catholic University's campus ministry that ultimately led to the resignation of the president of the pro-life group, according to a letter obtained by The Daily Caller.

"I am writing today to inform you that I am resigning from my position as President of Cardinals for Life at the Catholic University of America, effective immediately, because of

Satanist group *cont. from p 1*

launched a campaign claiming that "Satanic Abortions Are Protected By Religious Liberty Laws," recasting abortion as a religious ritual to do an end-run around state restrictions; in June I detailed how they're attempting to turn religious liberty laws to their advantage. The weirdest Satanic story of last year was that of a mom who was so triggered by the threat to legal abortion posed by Ruth Bader Ginsburg's death that she joined the Satanic Temple in response.

Texas, of course, represents the Satanic Temple's attempt to gin up controversy by utilizing maximum offensiveness in a traditionally red state. To that end, the Satanists commissioned a billboard along Interstate 20 in Garland reading "Abortion saves lives!" As if that weren't enough, the 10 by 40 foot billboard also informs commuters (falsely) that "Our religious abortion rituals avert many state restrictions," a reference to their campaign to classify abortion as a religious ritual to utilize religious liberty laws in defense of feticide.

According to Lucien Greaves of the Satanic Temple, two similar billboards have been erected in the Houston and Miami areas. He assured media outlets that the "point of the ritual isn't to glorify having the abortion. It's to affirm to the person having the abortion, that what they're doing is not a violation of their deeply held beliefs, it's something affirmative for them."

Even Greaves is aware that this tactic may be too clever by half—and that declaring abortion a religious ritual has ancient undertones that ring familiar for horrifying reasons. "We're not doing anything of the type that would equal something even close to infant sacrifice," he stated. "We're putting the safety and welfare of the pregnant person first." The child in the pregnant person's womb, of course, is the one being aborted—or sacrificed.

Some Christians have spoken out against the billboard, opposition which Greaves predictably welcomes. Controversy brings publicity, and the Satanic Temple desperately wants publicity. The Satanists are also attempting to secure billboards in Arizona, and presumably elsewhere. If people become upset, angry, or even attempt to get the billboards removed—so much the better. The Satanists are confident that America's religious liberty regime means that their beliefs are on equal footing with Christianity and other religions, and thus they can use the freedoms guaranteed by liberalism to game the system in defense of feticide.

As G.K. Chesterton famously noted, "When a man stops believing in God, he doesn't then believe in nothing, he believes anything." As upcoming generations increasingly identify as either secular or hold a cobbled-together spirituality designed to serve only themselves, we're likely to hear a lot more from the Satanic Temple.

VOICE OF JERUSALEM

Biden's Drive to War in the Middle East

By Caroline Glick

On Monday, Iran tested a new rocket. The Zuljanah rocket is a 25-meter (82-foot) three-stage rocket with a solid fuel engine for its first two stages and a liquid fuel rocket for its third stage. It can carry a 225 kg (496-pound) payload.

The Zuljanah's thrust is 75 kilotons, which is far more than required to launch satellite into orbit. The large thrust makes the Zuljanah more comparable to an intercontinental ballistic missile than a space launch vehicle. The US's LGM-30G Minuteman-III land-based ICBM for instance, has 90 kiloton thrust. The Zuljanah can rise to a height of 500 kilometers for low-earth orbit or, if launched as a missile, its range is 5,000 kilometers (3,100 miles) – far enough to reach Britain from Iran.

Israeli missile experts estimate that Iran has paid $250 million to develop the Zuljanah project. Monday's rocket launch itself likely cost tens of millions of dollars.

Iran is in deep economic distress today. Between the COVID-19 global recession, Iran's endemic corruption and mismanagement and US economic sanctions, 35% of Iranians live in abject poverty today. Iran's rial has lost 80% of its value over the past four years. Official data place the unemployment rate at 25% but the number is thought to be much higher. Inflation last year stood at 44% overall. Food prices have risen 59%.

When viewed in the context of Iran's impoverishment, the government's investment in a thinly disguised ICBM program is all the more revealing. With 35% of the population living in utter destitution and food prices rising steeply, the regime has chosen ICBMs over feeding its people.

Most of the media coverage of the Zuljanah launch failed to register the significance of the project both for what it says about Iran's capabilities and what it says about the regime's intentions. Instead, the coverage focused on the timing of the test. The Iranians conducted the test as they flamboyantly breach the limitations on their nuclear activities which they accepted when they agreed to the 2015 nuclear deal.

The Iranians are now enriching uranium to 20% purity – well beyond the 3.67% permitted under the so-called Joint Comprehensive Plan of Action, (JCPOA). They are using prohibited advanced centrifuges for enrichment in cascades at their Natanz nuclear installation. They are beginning uranium cascades with sixth generation centrifuges at their underground Fordo nuclear reactor in total defiance of the JCPOA. They are stockpiling uranium yellowcake far beyond the quantities permitted in the deal. They are producing uranium metal in breach of the deal. And they are test firing rockets that can easily be converted to nuclear capable ICBMs.

Reportage of Iran's aggressive nuclear has presented it in the context of the new Biden administration in Washington. It is argued that Iran is taking these aggressive steps to pressure the Biden administration to keep its word to return the US to the JCPOA and abrogate economic sanctions on Iran. In 2018, then-President Donald Trump renounced the JCPOA and re-imposed the economic sanctions that were abrogated in 2015 with the deal's implementation. Iran's idea is that out of fear of its rapid nuclear strides, the Biden team will move urgently to appease Iran.

Notably, the Zuljanah test exposed the strategic insanity at the heart of deal, which was conceived, advanced and concluded by then-President Barack Obama and his senior advisors.

The main strategic assumption that guided Obama and his advisors was that Iran was a status quo, responsible power and should be viewed as part of the solution – or "the solution" — rather than the problem in the Middle East. Iran's sponsorship of terrorism, its proxy wars and its nuclear program were unfortunate consequences of a regional power balance that put too much power in the hands of US allies – first and foremost Israel and Saudi Arabia – and too little power in Iran's hands. To stabilize the Middle East, Obama argued, Iran needed to be empowered and US allies needed to be weakened. As then-Vice President Joe Biden put it in 2013, "Our biggest problem was our allies."

A new balance of power, Obama argued would respect Iran's "equities" in Syria, Iraq, Lebanon and Yemen. As for the nuclear program, which was illegal under the Nuclear Non-Proliferation Treaty, which Iran signed, it was totally understandable. Given that Pakistan, India and allegedly Israel have nuclear arsenals, Obama's advisors said, Iran's desire for one was reasonable.

With this outlook informing its negotiators, the JCPOA's legitimization of Iran's nuclear program makes sense. The purpose of the deal wasn't to prevent Iran from becoming a nuclear power. It was to "balance" Israel by delegitimizing any Israeli action to block Iran from becoming a nuclear power.

While Israel and America's other allies would be massively harmed by this new balance of power, Obama and his European partners assessed that they would be more secure. They were convinced that once secure in its position as a regional hegemon, Iran would leave them alone.

The deal reflected this view. A non-binding clause in the JCPOA calls for Iran to limit the range of its ballistic missiles to 2,000 kilometers (1,240 miles) – taking the US and most of Europe out of range.

Many commentators view the Biden administration nothing more than Obama's third term. And from the perspective of its Iran policies, this is certainly the case. President Joe Biden's Iran policy was conceived and is being implemented by the same people who negotiated the JCPOA under Obama.

Aside from Obama himself, the official most responsible for the JCPOA was Rob Malley, who spearheaded the negotiations with Iran. In an October 2019 article in Foreign Affairs, Malley set out what the next Democrat administration's Iran policy should look like. He claimed that Trump's maximum pressure strategy was bringing the region to the brink of war because it was based on empowering US allies — first and foremost Israel and Saudi Arabia — to combat Iran's regional aggression and its nuclear program. In other words, it was based on restoring and reinforcing the regional balance of power that Obama set about undermining to Iran's benefit and to the detriment of America's regional allies.

Malley wrote that the only way to prevent war was to go back to the JCPOA and to Obama's policy of strengthening Iran at the expense of US allies – particularly Israel and Saudi Arabia.

The Zuljanah test Monday demonstrated that Iran doesn't share Malley's view of its position. It didn't spend $250 million on a rocket/missile that can hit Europe because it is scared of Israel and Saudi Arabia. It developed the Zuljanah because it wants the capacity to attack Europe. And it wants to attack Europe because it is a revolutionary, rather than a status quo regime that seeks global domination, not regional stability.

As for the timing, the Zuljanah was tested in February 2021 rather than October 2020 because Iran was deterred by Trump and his maximum pressure strategy and it is empowered by Biden and his maximum appeasement strategy. The prospect of war decreased under Trump. Now it increases with every pronouncement made by the likes of US Secretary of State Anthony Blinken and National Security Advisor Jake Sullivan. In recent days, both senior officials have warned that Iran is moving dangerously close to independent military nuclear capabilities. And both have made clear that to deal with the problem, the administration intends to go back to the JCPOA.

This policy is irrational even when assessed from within the closed cognitive circle of the Biden/Obama team. They intend to make an irrevocable concession to Iran – billions of dollars of revenue which will flow into its coffers once the sanctions are removed. And in exchange they are asking Iran to make a revocable gesture. Iran reinstated its nuclear enrichment at Fordo and raised its enrichment level to 20% at Natanz at the drop of a hat. If it turns the switches off to get the sanctions relief, it can turn them right back on after the money starts to flow.

This will almost certainly happen in June at the latest. On June 18, Iran will hold presidential elections. President Hassan Rouhani and Foreign Minister Javad Zarif will both leave office. All of the current viable candidates hail from the Revolutionary Guards Corps and they can all be guaranteed to abandon the JCPOA. So at best, the JCPOA's remaining shelf life is four months.

Biden, Blinken, Sullivan, Malley and their colleagues all must be aware that this is the case. The fact that they are moving ahead with their failed strategy all the same indicates that they are ideologically committed to their plan and will stay with it even as it drives the region to war.

This brings us to Israel. During the Trump years, Israel and the US were fully coordinated in their joint and separate actions to undermine Iran's nuclear program and its operations in Syria and Iraq. As a senior official in Trump's National Security Council explained recently, "Working together the intelligence agencies of both countries were able to accomplish more than they could on their own."

Obviously, those days are over now. And as Biden's team makes its presence felt fully, Israel's options for blocking Iran from becoming a nuclear power are diminishing.

When IDF Chief of Staff Lt. Gen. Aviv Kochavi announced last month that he had ordered the relevant IDF commanders to prepare operational plans to strike Iran's nuclear installations, most commentators assumed his target audience was the Iranian regime. Others argued he was issuing a warning to the Biden administration. The former claimed he sought to force Iran back from the nuclear brink. The latter argued he was demanding the Biden administration take Israel's positions seriously before it moves ahead with abrogating the sanctions.

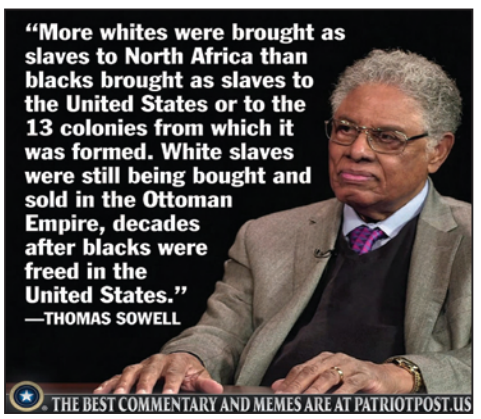
But in the face of the Biden team's strategic fanaticism and Iran's race to the nuclear finishing line, it's at least equally likely that Kochavi's intended audiences were neither the Iranians nor the Americans. Instead, he may well have been telling the Israeli public to be prepared for what is coming. And he may also have been telling Israel's regional partners that the time for joint action is now.

Ashli Babbitt *cont. from p 21*

the US Capitol and the State Capitols weren't closed down, you wouldn't have mobs trying to break in when they are denied access and agency. Like the Rehoboam in the scripture verse, our government is grabbing power, and shutting down dissent at the same time. Like Jeroboam, libertarians are leading a revolt without guidance from God. We have had a spring and summer full of violence, but the only thing wrong with the world is people enraged about wide spread systemic vote fraud.

According to ksat.com "Rosanne Boyland, Kevin Greeson, and Benjamin Phillips died of medical emergencies." Other people have been outed as terrorists, Yahoo News, one group doing the outing, reported one man was turned in by his own son, and one lady who had her nose broke by the riot squad was turned in by her lesbian daughter. There are two bill boards, posted by US.Tips.gov on I-43 asking people to snitch on their neighbors, and I am quite certain there are many more in Milwaukee and around the nation. Biden is already running a police state. Not to restrain Communists, Antifa, Black Lives Matter, or "peaceful demonstrators" who loot, burn, bomb, and murder, but against "terrorists and rioters," who hold flags. Protesting the electoral college was a page out of Antifa, and the left who did so when Hilary lost. While normal people didn't like the outcome, namely Biden in the White House, the Q-Anon crowd was like Antifa, in a de-facto sense they were protesting our Constitution. It was morons on the internet who were calling for Martial Law, and demanding Trump impose a second term, equating fraud with a military Coup D' Etat.

I wish Ashli was still here, and I certainly hope that patriots and veterans would join the Constitution Party, and commit to action that is disciplined and purposeful. Discipline includes the area of communications. We are about putting people into positions of authority as opposed to pushing from the outside. We are about leadership, people serving on local boards, running for local office, fighting for America based on principle, and what we can prove. We are about fighting forward as opposed to "pushing back."



Mexican bishops urge faithful to receive abortion-tainted COVID vaccines

'The bishops wrote that 'it is morally acceptable to use the vaccines against Covid-19 that have used cell lines from aborted fetuses in their research and production process.'

The Mexican bishops warned their faithful that "it is necessary … to be vaccinated to counteract COVID-19 as much as possible," even though the vaccines currently approved "use cell lines from fetuses aborted several decades ago."

The bishops attempt to bolster their claim of a moral imperative to take the vaccine by citing Pope Francis, whom they quote as saying "from an ethical point of view everyone should be vaccinated."

The statement, authored by the Health Pastoral Dimension of the Conference of the Mexican Episcopate (CEM), bases the need to take the currently available abortion-tainted COVID vaccines on disputed claims about the application of important moral principles and the safety of mRNA vaccines.

Moral arguments

The bishops dedicate much of their document to a discussion, and defense, of the moral liceity of abortion-tainted vaccines. In lockstep with the Pope and the Congregation for the Doctrine of the Faith (CDF), the CEM instructs its flock that "it is morally acceptable to use the vaccines against Covid-19 that have used cell lines from aborted fetuses in their research and production process."

The CEM lifted this instruction directly out of the CDF's December 21 "Note on the morality of using some anti-Covid-19 vaccines."

Despite declaring that the CDF's note "deserves to be attended to with the assent of all the faithful," the CEM seems to have glossed over the section that reads "vaccination is not, as a rule, a moral obligation."

Fr. Chad Ripperger, a prominent theologian and exorcist, has spoken out on the misapplication of the principle of "remote material cooperation" being used here by the CEM to justify using abortion-tainted vaccines.

Noting that vaccines are not in themselves morally impermissible, Ripperger demonstrated the conditions required to legitimately apply "remote material cooperation" to the case of abortion-derived vaccines.

"If there are vaccinations that are derived from aborted fetal tissue or have a relationship to aborted fetal tissue lines, then we have an obligation to seek out those that are not doing that — even if there is sufficiently grave cause to have the vaccination done, you still have to seek the alternative," Ripperger explained.

"The real problem with COVID is there's not sufficiently grave cause to be vaccinated for it … People are being brainwashed by the mainstream media; they're constantly harping on this thing."

"There has to be mass death in order for us to start using things that are gravely morally illicit in order to survive," he continued. Since the death rate for COVID-19 is so slight, "it is not something for which the health requirements suffice in my opinion."

Did Catholic Church in US compromise her freedom by accepting $3B in federal COVID aid?

'We gave them a sword in taking the money and I don't see why they will not use it.'

Some high-profile Catholics are raising concerns that the U.S. Catholic Church's acceptance of COVID aid money from the federal government may result in the Church not only losing her freedom but having her unique moral voice silenced.

The concern comes in the wake of a recent hit piece by the Associated Press (AP) that accused the Catholic Church in the U.S. of "sitting on billions" in assets while collecting over $3 billion from the federal government's COIVD relief program. Catholic investigative reporters along with U.S. dioceses are crying foul over the piece.

In a Feb. 4 investigative report, the AP accused "the Roman Catholic Church" in the U.S. of amassing "taxpayer aid" through the federal government's Paycheck Protection Program — brought in by the Trump administration as part of the CARES Act in March of 2020 — despite, according to the AP, having "billions" in assets. "That makes the Roman Catholic Church perhaps the biggest beneficiary of the paycheck program," the report stated.

Numerous Catholic commentators immediately pointed out major fallacies in AP's Feb. 4 report and in a similar July 10 report.

• Timothy Cardinal Dolan, Archbishop of New York: "First, the Paycheck Protection Program (PPP) was designed to help employers continue to pay its [sic] employees when the economy went into lockdown in response to the coronavirus. The purpose was to keep employees employed during these difficult times. Religious institutions were invited and permitted to participate, as they employ large numbers of people across the country."

• "Here in the Archdiocese of New York, if you combine the number of fulltime employees in our parishes, schools, agencies, and central administration, there would be 6000 fulltime and 4000 part-time employees. Without assistance from the PPP, many of our employers would have had no choice but to lay-off their employees, reducing the church's ability to assist people in need, and forcing our people to seek unemployment."

• Archbishop Paul Coakley of Oklahoma City, chairman of USCCB's Committee on Domestic Justice and Human Development: "The Paycheck Protection Program was designed to protect the jobs of Americans from all walks of life, regardless of whether they work for for-profit or non-profit employers, faith-based or secular."

• "The Catholic Church is the largest non-governmental supplier of social services in the United States. Each year, our parishes, schools and ministries serve millions of people in need, regardless of race, ethnicity or religion. The novel coronavirus only intensified the needs of the people we serve and the demand for our ministries. The loans we applied for enabled our essential ministries to continue to function in a time of national emergency."

• Catholic News Agency's Jonah McKeown: "In reality, 'the Roman Catholic Church' in the US is made up of tens of thousands of separate

US bishops' charity arm caught funding promoters of abortion, LGBT activism

Three Catholic Campaign for Human Development–funded organizations have signed on to or directly participated with a coalition directly pushing abortion and transgenderism.

Every once in a while, a Catholic Campaign for Human Development (CCHD) funded organization receives public recognition and accolades for its work and its relationship with the Catholic Church. On February 1, 2021, the CCHD-funded Stand Up Nashville (SUN) received strong praise from the official news office of the United States Conference of Catholic Bishops (USCCB) called the Catholic News Service. The author of the piece is Aimee Shelide Mayer, who happens to be Nashville's local representative of the National Catholic Labor Network. Referring to SUN as one of the local "prophets in our midst who cry out in defense of workers," Mayer points out that SUN is receiving support from the CCHD.

Given this high praise, it was deemed important to take a closer look at SUN, and what we discovered was much more than we expected. SUN and two other CCHD-funded organizations have signed on to or directly participated with a coalition directly pushing abortion and transgenderism. Furthermore, the leadership of one of these grantees is heavily involved in the promotion of homosexual activism and is made up of member organizations doing the same.

CCHD's most recently published list of grantee recipients shows that the organizations Nashville Organized for Action and Hope (NOAH) [$60,000], Memphis Interfaith Coalition for Action and Hope (MICAH) [$50,000] and Stand-Up Nashville (SUN) [$45,000] received Catholic funding totaling $155,000.

We're going to tackle these organizations one at a time, beginning with SUN. What we've discovered is that SUN is in direct violation of CCHD grant guidelines regarding its organizational members, and its executive director and majority of board members are thoroughly committed to the promotion of abortion and LGBT ideologies.

CCHD grant guidelines specifically state that member organizations that are part of a grantee must not endorse or advocate items against Catholic teaching:

Can you affirm compliance with Catholic Social Teachings? This means that your organization, and its affiliates, partners and coalition members must not endorse or advocate policies and issues that are contrary to Catholic Social Teaching – such as favoring abortion, euthanasia, capital punishment, same-sex marriage, racism, sexism and other prejudices. [emphasis added]

Two of Stand Up Nashville's seven member organizations directly endorse and advocate for abortion as a "right" and are engaged in LGBT activism. If SUN indicated to the CCHD that its member organizations were in compliance with this guideline, then SUN lied. Furthermore, since this is a guideline that is supposed to be verified by the CCHD's "rigorous vetting process," it's clear that the CCHD likewise failed to perform its due diligence.

Partnership for Working Families (PWF)

PWF is also identified on SUN's members page as a member organization:

PWF has taken an obvious stand for

This pontifical foundation is bringing LGBT ideology to children around the world

The Scholas Occurrentes foundation has also recently hosted a number of conferences from pro-abortion, and otherwise heterodox speakers

February 9, 2021 (LifeSiteNews) — The story of the series of children's books promoted by Pope Francis' pet pontifical foundation, Scholas Occurrentes, might seem an old one to some in a world that moves as fast as ours. The fifteen booklets published in various Spanish-speaking countries in 2015 under the title Con Francisco a mi lado ("With Francis by my Side") attracted attention from the start: under cover of promoting values such as friendship, joy, hope, peace, simplicity, dignity, self-esteem and "diversity," they included obvious promotion of gender identity and same-sex marriage – the "LGBT" goals. But the remarkable news today is that since then, nothing has been done in order formally to dissociate the papal organization from the publication: on the contrary, Scholas Occurrentes is refusing to answer questions about it, according to an in-depth study by Catholic News Agency published last Thursday in Spanish (and on Friday in English). The CNA report also highlights the fact that the foundation has recently hosted a number of conferences from pro-abortion, and otherwise heterodox speakers.

Scholas Occurrentes was first promoted in Buenos Aires by Cardinal Bergoglio as an initiative that would help children and young people from different, mainly underprivileged backgrounds (including different religions) to find a place where they could meet and exchange ideas under the form of art, sports, technology and creativity, in a "new culture: the Culture of Encounter." In 2015, the organization was given the status of a pontifical foundation, even though it has no specific Catholic identity, instead promoting "openness" to all and the idea that "living makes sense."

Not unsurprisingly, Scholas Occurrentes is openly committed to promoting eight of the UN's Sustainable Development Goals for 2030, including "gender equality." It has the support of Ban Ki-moon, the former UN General Secretary whose involvement with "LGBT rights" was a marker of his work at the head of the United Nations.

So finding LGBT propaganda in the booklets it promoted was not in contradiction with its self-proclaimed aims.

In the booklet titled I am a dog!, a white kitten manages to get itself "recognized" as a dog thanks to a donkey that identifies as a horse. As ludicrous as the story may sound, this is clearly the promotion of "gender identity" ideology. In explaining the story for parents and educators, Scholas says that "our image and sense of ourselves develops throughout our lives," according to CNA.

In Chiquillería ("Kids' Stuff"), one of the stories published by Scholas, homosexual "parenthood" is promoted in relation along with the value of "diversity."

"There are children who have a father and mother. One of each one. Others, two of each. Others, one and two. Or two and one," the story reads. CNA's report notes that "[a]n illustration included shows two children holding hands by two characters wearing skirts." Here also, the CNA report quotes comments by Scholas that leave little doubt
