"The essential quality of a market system, contrary to popular thinking, is not that it promotes greed; But rather, that it renders greed harmless." Israel Kirzner

Special Counsel Michael Gableman

Wisconsin Citizens Demanding Election Integrity Thank Special Counsel Gableman for His Efforts to Uncover Truth of 2020 Election

March 7, 2022
The Honorable Michael Gableman
Wisconsin Office of the Special Counsel
Voter Fraud Investigation

Dear Special Counsel Gableman,

An overwhelming majority of Wisconsinites wish to personally thank you for your extremely fruitful efforts in investigating the voter fraud present in the November 2020 election.

The well-researched data you gathered and presented in your report clearly demonstrates a well-organized, well-choreographed and well-funded voter fraud network which utilized a myriad of avenues and techniques to create fraudulent ballots and incorporate them into the official vote count. The evidence you presented makes this conclusion *Continued on page 10*

House Democrats cancel looming embarrassment

They finally realized they (not Big Oil executives) would be humiliated by reality

By Paul Driessen

Mike Tyson once observed, everyone has a plan until they get punched in the mouth.

March 8 was to be anti-oil Democrats' big day. Having pilloried (weak-kneed) Big Oil executives during two previous hearings over supposed climate change prevention failures, House *Continued on page 7*

sent to underpopulated cities to fill "quotas."

At least 4 billion "useless eaters" shall be eliminated by the year 2050 by means of limited wars, organized epidemics of fatal rapid-acting diseases and starvation. Energy, food and water shall be kept at subsistence levels for the non-elite, starting with the White populations of Western Europe and North America and then spreading to other races. The population of Canada, Western Europe and the United States will be decimated more rapidly than on other continents, until the world's population reaches a manageable level of 1 billion, of which 500 million will consist of Chinese and Japanese races, selected because they are people who have been regimented for centuries and who are accustomed to obeying authority without question.

From time to time there shall be artificially contrived food

Gandhi, MLK, the Freedom Convoy: The Price of Peaceful Resistance

By William L. Kovacs

While the local, provincial, and federal Canadian police break up the 22-day protest by the truckers, aka, the Freedom Convoy, it must be remembered, "The price of liberty is eternal vigilance." The Freedom Convoy is merely the opening act of what will be a long struggle against Canada's Prime Minister Trudeau, a man *Continued on page 12*

Trump Promises a "RECKONING"

By Michael Baxter, March 13, 2022

A Mar-a-Lago source speaking to Real Raw News under promise of anonymity said on Saturday that President Donald J. Trump has spent much time in private council with his most trusted advisors ever since Russian Vladimir Putin began sacking biolabs and freeing imprisoned children in Ukraine.

RRN was the first outlet to report a liaison between Trump and the Russian leader, a sentiment now echoed by many alternative news sites across the net.

Trump has privately applauded *Continued on page 18*

Plastic Is NOT a Threat

By Tom DeWeese

I am fed up to my burning ears with the carte blanche castigation of plastic. Plastic is one of the greatest inventions ever, not only for modern society, but also for the environment. If plastic seems to now pose an environmental threat, it's not plastic's fault – but the fault of the environmental movement itself.

The use of plastic reduces the need for other natural resources. *Continued on page 20*

Abp. Viganò: Globalists have fomented war in Ukraine to establish the tyranny of the New World Order

The Ukrainian people, regardless of what ethnic group they may belong to, are merely the latest unwitting hostages of the supranational totalitarian regime that brought the national economies of the entire world to their knees through the COVID deception.

Thus it was that on August 24, 1939, Pius XII addressed both rulers and peoples as war was imminent. These were not words of empty pacifism, nor of complicit silence about the multiple violations of justice that were being carried out in many quarters. In that radio message, which some people still remember hearing, the appeal of the Roman Pontiff invoked "respect for each other's rights" as a prerequisite for fruitful peace negotiations.

The Media Narrative

If we look at what is happening in Ukraine, without being misled by the gross falsifications of the mainstream media, we realize that respect for each other's rights has been completely ignored; indeed, we *Continued on page 9*

Why Rely on OPEC for Biden Blunder Bailouts?

By Larry Bell

Saudi Arabia, the UAE and other OPEC nations can be expected to consider global security implications of Biden administration pressures on them to increase oil and gas production to compensate for shortfalls influenced by their own anti-fossil energy policies.

These preexisting conditions are only made worse by an appropriate belated *Continued on page 5*

Steve's Say . . .
Why Can't They See It?

By Steve Welcenbach

For a few years now, this nagging question continues to confound my intellect while attempting to sow hopelessness and fear in my heart. While the hopelessness and fear part never took root, I find it so hard to understand why normal, rational people refuse to indulge themselves in easily accessible research. Their findings would yield a logical basis for what's really going on.

The Ukraine turmoil as the MSM sells it threatens to entangle the entire planet into the next full scale global conflict, aka WWIII. Yet criminal Biden cannot even dispatch one pilot to a plane-at-the-ready in Poland to assist the "poor Ukrainians" against the conquering Russian hordes. 1st question: Could criminal Biden send any soldier into any conflict anywhere? If so, why hasn't he done it yet, especially in Ukraine, which the Fake News Media, Hollywood and most of Washington DC claim as the hill to die on. And so they shall.

Just like during the COVID-19 plandemic, the MSM continues to use fake pictures and staged photo-ops to evoke strong emotional responses from ordinary people. A short journey down most truth media sites uncovers the fraud continually used to accomplish this goal. Don't believe me? Watch this, as one example: https://rumble.com/vxmpzy-awk-march-interview-w-bob-amazing-insight-on-worldwide-events-biblical-insi.html

So what's really going on in Ukraine? Well, it's quite simple. The answer is always the same. Whatever the MSM tells you, the opposite is true. That never changes.

The Ukraine to this day retains the title of the most prolific source of human trafficking/slave trading in the world. The word Slav, used as a catch for all related caucasian people of eastern Europe, means slave. The gigantic number of caucasian people trafficked into slavery from this region has no rival in the past 1000+ years.

More recently, Ukraine became the money laundering and bioweapons R&D/manufacturing center of the New World Order/Deep State players. During Bush's term in 2005, the pentagon began directly funding and staffing the bioweapons labs already established there while building new ones. When Putin's troops moved into Ukraine, these 30 facilities were their primary targets of interest. One can confirm this irrefutable fact by superimposing the Russian troop movements with the locations of the Bio Labs.

This Bioweapons infrastructure built and financed by the Deep State players also includes tremendous manufacturing capabilities. Did you not wonder how a "vaccine" which Fauci et al said would take up to 10 years to develop could have 3 billion doses available for distribution at the start of 2021? Answer: They developed it long ago, probably in Ukraine then manufactured it and had it all set to go. Trump knew by throwing a bunch of cash at the greedy Big Pharma criminal syndicate they would unleash their death shot prematurely. This early release proved to be their fatal error. Big Pharma knows it has no future. Just watch as their officers liquidate their stock and the price plummets.

So just like that, Putin goes into Ukraine and poof! The plandemic disappears. No masks, no forced jabs, fired employees being asked to return to work. What happened? Putin. He cured the world pandemic with one swift military action. I guess you really can fight germs with guns!

But I truly think the Biden regime's characterization of Putin as some kind of genie or warlock goes beyond believability. They credit him with inflicting runaway inflation on the West, skyrocketing gas prices and all of the supply chain issues engulfing our economy. Somehow I'm not buying that all of these things that began with criminal Biden's installation were caused by Putin's military action in Ukraine. The next thing you know they'll be claiming that Putin destroyed the "petrodollar," the fiat currency issued by the Federal Reserve, i.e the world banking cabal. Wait a second. I guess he has. Gold now backs the Ruble. Let's see how long the Cabal can hang on, especially since China, India, Brazil, Saudi Arabia and many other countries committed themselves to gold-backed currency.

So things never looked so bleak for the Banking Cabal and Great Reset designers. As my neighbor just put it in a text, "Putin must lose at any cost. Or the Deep State goes down." Right on, brother!

With the Ukraine money-laundering piggy bank broken open and raided, and their long-developed weapons for population control destroyed, the Deep State's palpable desperation echos through the Fake News Media. It appears the lying MSM language perverts met their match in Donald J. Trump and the White Hat alliance all while they apparently controlled the US government and most others across the globe. I guess stealing that election from the duly elected Donald J. Trump wasn't such a great idea after all.

Truth always wins eventually. Keep searching for the truth and you will be greatly rewarded with understanding and peace of mind. God's word is truth. Seek it and use it.

Next up: Xi Jinping and the invasion of Taiwan. And lots more to follow that.

- page 182 in "Something Beautiful is Going to Happen…"

Our Vision

We aspire to a world in which people, made in the image of God, reconciled to Him by Jesus Christ, and reflecting God's own creativity, work together to enhance the fruitfulness, beauty, and safety of the Earth, enabling more and more of our neighbors to enjoy good health, long life, freedom, justice, and spiritual and material abundance, for the glory of God and the good of our fellow man, thus fulfilling the two Great Commandments to love God and love our neighbor.

Our Mission

We seek to magnify the glory of God in creation, the wisdom of His truth in environmental stewardship, the kindness of His mercy in lifting the needy out of poverty, and the wonders of His grace in the gospel of Jesus Christ.

Our Identity

A coalition of theologians, pastors, ministry leaders, scientists, economists, policy experts, and committed laymen, the Cornwall Alliance is an evangelical voice promoting environmental stewardship and economic development built on Biblical principles.

Fossil Fuels Should Evoke Pride, Not Pandering, From Supporters

By Gregory Wrightstone, March 9, 2022

EQT Corp. CEO Toby Rice powerfully argues for adding pipeline capacity to relieve New England of exorbitantly priced liquified natural gas (LNG) — then panders to climate alarmists. It's disappointing.

"The problem is very straightforward," writes the head of the country's largest producer of natural gas in a letter to U.S. Secretary of Energy Jennifer Granholm. "The pipelines heading to New England are full, and as a result, we cannot physically flow that gas needed to meet growing demand without more infrastructure."

The solution, says Mr. Rice, is to build more pipelines. He lists six that could have served more than 25 million Northeastern homes had they not been canceled or otherwise blocked. LNG is imported by New England from as far away as the Mideast at a price many times that of Marcellus Shale gas just a few hundred miles distant.

Mr. Rice makes great points, but then adds almost apologetically: The money New Englanders save by using domestic gas could be invested into "decarbonization opportunities, such as renewables."

Really? Very likely, many New Englanders would prefer to put disposable income toward their children's education or a vacation. Not only would those be more rational investments, but people are increasingly dismissing green energy as a public nuisance.

Robert Bryce reports in Forbes that U.S. communities have rejected or restricted more than 320 wind projects since 2015. In 2021 alone, 13 solar projects were turned down.

"The incurably low power density of wind and solar energy means that they require cartoonish amounts of land," says Mr. Bryce. "Furthermore, the notion that there are plenty of rural towns and counties who just can't wait to have forests of 600-foot-high wind turbines and oceans of solar panels inflicted upon them is nothing more than rank propaganda."

Elsewhere in his letter, Mr. Rice soft-pedals the promise of the gas industry: "This is not an argument that natural gas should grow in perpetuity, or that renewables are not a viable solution." Why should not gas usage grow? The fracking technology that is used to liberate the gas has been proven safe after more than 100,000 wells have been completed with no harm. It is the favored fuel by chefs to cook their food and homeowners to heat their homes. Why limit consumers' options for no good reason?

Perhaps Mr. Rice believes that carbon-dioxide emissions from burning natural gas really are dangerous. If so, he should broaden his reading beyond the rantings of climate alarmists.

However, it is more likely that the Pittsburgh-based CEO is pandering. He is likely pretending that there is a need for a solution to a climate emergency that does not exist. Possibly he is allowing room for the delusions of the climate-crazed to make the sales of his product more acceptable to the loud fringe voices.

Mr. Rice has plenty of company. Check the website of the American Petroleum Institute: "The U.S. natural gas and oil industry is working to address the risks of climate change and build a lower-carbon future." More pretending.

Or Exxon Mobil's: "ExxonMobil aims to achieve net zero emissions." It's a dangerous pretense. Serious attempts to achieve this impossible goal would wreck economies and engender social upheaval.

Sixty miles northeast of EQT headquarters is Indiana, Pa., and Pennsylvania Rep. Jim Struzzi. He is a member of the Republican legislative majority trying to stop Democrat Governor Tom Wolf from imposing a carbon tax, which seeks to eliminate electricity generated by the burning of fossil fuels. With hundreds — if not thousands — of his constituents' jobs dependent on three nearby coal-fired plants, Rep. Struzzi has proposed replacing the Wolf tax with a program to capture the plants' carbon-dioxide emissions.

Carbon capture, says Rep. Struzzi, offers a chance to have a "mutually inclusive" future of renewable energy with legacy fossil fuel infrastructure. It also appears to be an unworkable, pie-in-the-sky stab at satisfying the green lobby's purported environmental concerns simply to be allowed to earn a living by making electricity.

"(O)f the 6,586 industrial and power plants in the United States, only 418 facilities that qualify for (federal carbon-capture tax) credits are capable of supplying carbon dioxide cheaply enough for carbon sequestration," reports the Institute for Energy Research. With many millions of tons of carbon dioxide to be diverted to underground storage cavities, IER estimates the cost to be an expensive $29-$50 a ton, depending on the type of plant.

Whatever the technology's feasibility, it would not improve the climate. The potency of carbon dioxide as a greenhouse gas already is near its peak. The effect of avoiding additional emissions would be unmeasurably small.

Climate alarmists waste our time with impractical solutions for a made-up problem. Supporters of fossil fuels waste theirs by seeking the approval of a green lobby singularly focused on the destruction of an industry whose remarkable contributions — unprecedented prosperity and health — should evoke pride. We like this from an American Coal Council video:

"This is a tribute to all the proud coal miners out there who aren't ashamed of their profession. The ones who are proud to be the backbone of this country…There is no greater purpose than ours."

This piece originally appeared at RealClearEnergy.org and has been republished here with permission.

Free to You and a Friend: The Book that Cuts through the Confusions of the Woke/ Social Justice Movement

We've offered before to send you a free copy of my booklet Social Justice vs. Biblical Justice, and many of you have taken us up on that offer. Maybe you're among them. Why do it again now?

Because the Woke/Progressive/Social Justice movement hasn't gone away—and isn't going away soon.

It's increasingly clear that younger Americans—from Millennials (aged 26–41) to Gen Z (aged 10–25)—are being seduced in large numbers. Two years ago, 70% of Millennials and 64% of Gen-Z said they'd be somewhat or extremely likely to vote for a socialist. And things haven't turned around since.

The reason? These young people are passionate about justice.

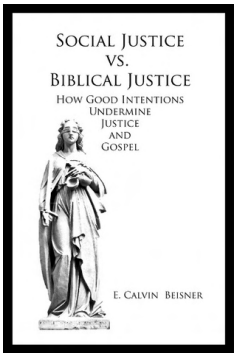
The problem? They don't know what it is. Worse, they think it's something it isn't.

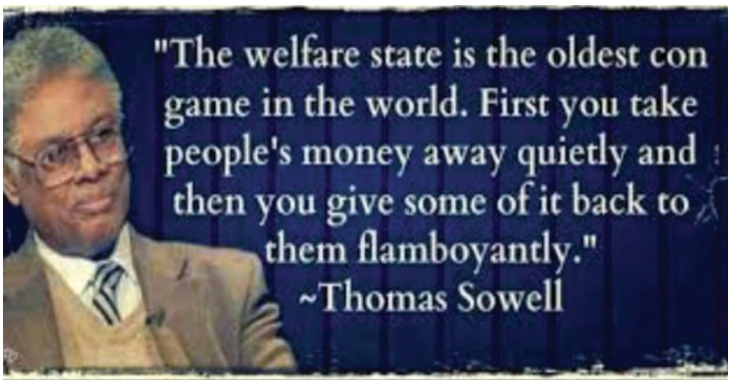
That's why we want to give you not one copy of Social Justice vs. Biblical Justice but TWO as our way of saying "Thank you!" when you give ANY amount to the Cornwall Alliance from now to the end of March and request them.

We want you to have you own and give the other way, particularly to someone aged 41 or younger. And if you already have a copy, we want you to give TWO away!

To request your two copies of Social Justice vs. Biblical Justice: How Good Intentions Undermine Justice and Gospel, simply write "Promo 22-03" when you make your donation through our secure online giving page, by mailing your check to Cornwall Alliance, 875 W. Poplar Ave, Suite 23-284, Collierville, Tennessee 38017, or by calling us at 423-500-3009 by midnight on March 31st. In any case, mention "Promo 22-03" or Social Justice vs. Biblical Justice.

When giving online you can write in the comments box on the second page of our donation form.





The Heartland INSTITUTE
Ideas that empower people

The Heartland Institute is a national nonprofit research and education organization devoted to discovering, developing, and promoting free-market solutions to social and economic problems.

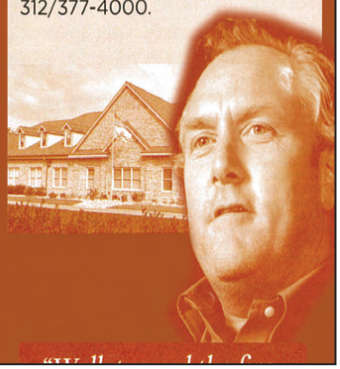
ANDREW BREITBART FREEDOM CENTER AT THE HEARTLAND INSTITUTE

On March 1, 2016, on the fourth anniversary of his death, The Heartland Institute dedicated the public meeting space in its new home in Arlington Heights in honor of Andrew Breitbart.

The Andrew Breitbart Freedom Center is a state-of-the-art meeting facility with seating for 75. Events are scheduled to take place every week in the space, featuring authors of new books, freedom activists and thinkers, and civic and business leaders.

"Andrew Breitbart was a genuine American hero," said Joseph Bast, president of The Heartland Institute, in a video announcing the dedication. "He inspired millions of people to stand up and speak the truth about what is happening in America. We could not be more pleased to have his name forever affixed to The Heartland Institute. We are honored that his family and friends believe this is a suitable addition to his legacy."

For more information about the Andrew Breitbart Freedom Center, please contact Nikki Comerford at ncomerford@heartland.org or 312/377-4000.



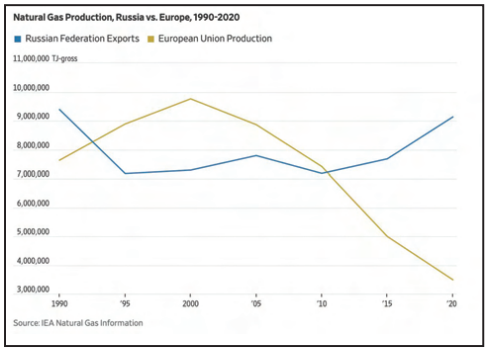
Russia Collusion exposed in 2018: Congressional report detailed 'Russian Attempts to Influence' & Fund Environmental Groups to Oppose Fracking in Europe & U.S.

By Marc Morano, Climate Depot, March 4, 2022

The Russia "collusion" no one seems to want to remember. Here are excerpts from a 2-18 U.S. Congressional report from the Committee on Science, Space and Technology. It details how Russian

Excerpt from 2018 Congressional Report: Fracking Threatens the Kremlin's Agenda

Republicans and Democrats agree the Kremlin is manipulating environmental groups in an attempt to carry out their agenda



The Kremlin has a motive to disrupt U.S. energy markets and influence domestic energy policy, since American energy represents a direct threat to Russian energy interests. Russia's efforts to influence U.S. energy policy are well documented in the public domain. U.S. presidential candidates, European officials, and the U.S. intelligence community have all publicly noted that Russia and its government corporations are funding a covert anti-fracking campaign to suppress the widespread adoption of fracking in Europe and the U.S., all in an effort to protect the influence of the Russian oil and gas sector.22

The substantial increase in domestic production has resulted in an abundant supply of American energy, which is increasingly making its way into the global marketplace. While this stands to provide substantial economic benefits to the U.S., it simultaneously represents a direct threat to Russian energy interests. First, an abundance of American supply in the global energy marketplace stands to reduce Russian market share and thus revenues generated from oil and gas activities. Second, by providing supply alternatives for European countries dependent on Russian supply and infrastructure, American energy stands to disrupt the Kremlin's ability to leverage energy consumption for geopolitical influence.

Russia provides roughly 75 percent of the natural gas imported by countries in Central and Eastern Europe while the countries in Southeast Europe "receive almost all of their natural gas from Russia." 17 "Russia's Gazprom has acknowledged for the first time a threat to its dominant position in European gas market from an expected influx of liquefied natural gas (LNG) produced in the United States under [the Trump] administration." 18 Shortly after this acknowledgment, U.S. LNG made its way to Poland 19 and Lithuania. 20 In fact, Poland recently signed a five-year deal with the United States to import liquefied natural gas into the country in an attempt to decrease dependency on Russian energy supplies. 21 …

As the threat of American energy continues to grow, so does the Kremlin's incentive to influence energy operations in Europe and the United States. Moreover, as they have demonstrated, the Kremlin will use any and all tools at their disposal to preserve Russia's dominant energy status and to maintain its stranglehold over Eastern and Central Europe. …

Former Secretary of State and then-presidential candidate Hillary Clinton, with access to intelligence reports, made a private speech in 2014, according to documents from WikiLeaks, which included statements about the struggles of dealing with Russian-backed environmental groups. According to a media report, Secretary Clinton said the following: "We [the State Department and the U.S.] were up against Russia pushing oligarchs and others to buy media.

We were even up against phony environmental groups, and I'm a big environmentalist, but these were funded by the Russians to stand against any effort, 'Oh that pipeline, that fracking, that whatever will be a problem for you,' and a lot of the money supporting that message was coming from Russia."24 …

In January 2017, the Office of the Director of National Intelligence released a report that contained "clear evidence that the Kremlin is financing and choreographing anti-fracking propaganda in the United States." 25 The report found that the Russian-sponsored news agency RT (formerly Russian Today) "r[an] anti-fracking programing, highlighting environmental issues and the impacts on public health," which "is likely reflective of the Russian Government's concern about the impact of fracking and the U.S. natural gas production on the global energy market and the potential challenges to [Russian energy companies'] profitability," such as state-controlled Russian energy giant Gazprom.26 …

A Republican staff report by the Senate suggests that Russian funds have been funneled through off-shore corporations and passed on to U.S.- based environmental activist organizations with the intent to effect political change. 27 …

More recently Senator Ben Cardin released a voluminous report on Russian manipulation of the media over decades. Specific to oil and gas, the Cardin report cited a "study by the Wilfried Martens Centre for European Studies [which] reports that the Russian government has invested $95 million in NGOs that seek to persuade EU governments to end shale gas exploration," which illustrates how American energy directly clashes with the

Energy Independence!

By Craig Rucker, President of CFACT

Then Biden yanked away what generations had worked for in the blink of an eye.

Put that together with Biden's provocative weakness in Afghanistan and now Ukrainians are paying the price in blood. Will Taiwan be next? Then who?

I addressed these issues and more in a talk I gave in Virginia.

"Efforts to go net zero have diminished the ability of nations to provide sufficient energy to meet demand," I explained, "and this gives tyrants like Vladimir Putin an opportunity to provide that energy in the form of natural gas and rake in millions to fund his war machine."

If you watched President Biden's State of the Union Address you received no sign that Biden will wake up and value American energy independence above catering to his left-wing base.

Marc Morano took Biden to task on Fox and Friends explaining. "Russian oil imports are at an 11 year high. We're importing 600,000 barrels a day from Russia. And Russia's federal budget is 40% based upon oil and gas revenue."

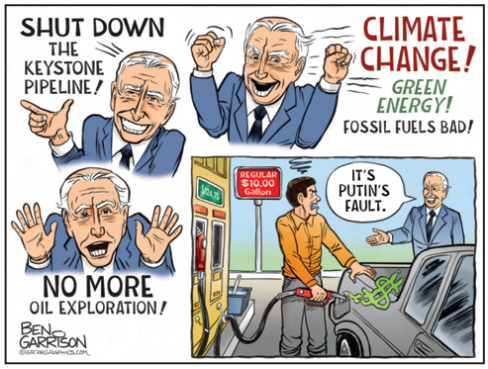
Environmentalist Michael Shellenberger was very clear. We shared his tweet with CFACT's Facebook friends. "Russia produces 3X more gas than Europe produces. Why? Because climate activists, partly funded by Russia, blocked fracking."

It's not just hydrocarbons. Wind and solar, as inefficient and intermittent as they may be, are WHOLLY DEPENDENT on rare earth elements and manufacturing from China and metals from Russia!

This is no accident. China and Russia played the useful idiot Left like a drum, stifled domestic mining, drilling and manufacturing and got us hooked on supplies from the worst nations on Earth.

Anyone who thinks importing resources from China and Russia instead of producing them at home, and that by doing this it will somehow lower the temperature of the globe, is too clueless to lead.

Energy independence now! We must settle for nothing less.



The Stampede of the Green Lemmings

By Viv Forbes

No country on Earth relies entirely on wind/solar energy, but Australian politicians aim to achieve this miracle.

They are leaders in the Stampede of the Green Lemmings.

Solar energy has a huge problem. Even on sunny days almost nothing is generated to meet the demand peaks around breakfast time and dinner time - the solar energy union only works a six-hour day, goes on strike with little warning, and takes quite a few sickies.

So, for at least 18 hours of every day, electricity must come from somewhere else. Then around noon, the millions of solar panels pour out far more electricity than is needed, causing electrical and financial chaos in the electricity grid.

Naturally our green "engineers" see wind power as filling the solar energy gaps. But wind power has a union too and they take lots of sickies when there is no wind over large areas of the continent. And they down tool in storms, gales or cyclones in case their whirling toys are damaged.

So the green planners claim that batteries can solve these intermittent problems of the green energy twins.

They will need to be humungous batteries.

Batteries are just a crutch for a crippled generation system. And with fierce lithium battery fires reported regularly, who wants a humungous fire-prone battery over the back fence or in the basement?

A battery is not a generator of electricity – every battery (including Snowy 2) is a net consumer of electricity. Batteries are very expensive, most lose capacity as they age, and every conversion between DC storage and AC transmission triggers energy losses. To collect, back up and re-distribute green electricity will require a continent-spanning spider-web of transmission lines with all the costs and energy losses that network entails.

Still nights, and calm cloudy days, are what really expose the problems of wind-solar-plus-batteries.

Suppose electricity consumers require 100 units of electricity every day. A well designed coal, nuclear or gas power station can do that, 24/7, day after day, whatever the weather.

But to insure a wind/solar system against, say, 7 days of calm/cloudy weather would require a battery capable of storing 700 units of electricity. To re-charge this huge battery while still supplying consumers will require much larger wind/solar generating capacity. However if several weeks of windy/sunny weather then occur, this big battery will sit idle, connected to a bloated expensive generation system that is capable of delivering far more power than is needed.

Sunny/windy weather brings a deluge of green energy, causing power prices to plunge at irregular intervals, and forcing reliable generators to stop producing and lose money. Eventually they will close. Once all coal-gas generators are all gone, every (inevitable) green energy drought will awaken the spectre of extensive blackouts.

On top of all these practical problems of green energy, we have the massive carbon credits scam, where speculators sell green fairy stories to greedy bankers, and real producers are forced to buy these fictitious "products", passing the costs onto real industry and consumers.

Australia is following the green energy lemmings of Europe.

Germany once produced abundant reliable electricity from coal and nuclear power – the backbone for German industry. Then green ants started nibbling at this backbone, replacing it with wind-solar toys. Now Germany has expensive electricity, a grid in danger of collapse and must rely on imported gas from Russia, nuclear power from France or hydro-power from Scandinavia.

UK is also following similar foolish energy policies, even banning exploration of their own oil/gas resources.

Australia is almost alone in the southern oceans, with no near neighbours to buy, beg or borrow electricity from. We cannot afford to follow the green energy lemmings or their billionaire pied pipers.

Biden Blunder *cont. from p.1*

American ban on Russian imports which should never have been necessary for our recently energy-independent country in the first place.

A Wall Street Journal poll has indicated that 79% of Americans favor a ban on Russian hydrocarbon imports in retaliation for their Ukraine invasion even if it further increased U.S. energy prices.

This public expression of high moral principles comes at a time when our country was already experiencing painfully escalating inflation.

An OPEC "quick fix" oil injection timed to help get Democrats through an upcoming 2022 congressional election will only work to extend control by the same failed people and programs that are destroying global energy stability and defense security until it is too late for reversal.

Peaceful members of Arab communities will likely take no comfort as the Biden administration which now also pleads for increased oil production from Iran and Communist Venezuela, is simultaneously pursuing reenactment of the Obama administration's 2015 Joint Comprehensive Plan of Action (JCPOA), also known as the so-called "Iran nuclear deal."

After desperate White House officials met with the Venezuela regime to discuss buying oil from them in exchange for dropping sanctions, then asked also whether the U.S. might even purchase Iranian oil, Transportation Secretary Pete Buttigieg responded that "all options are on the table."

A resurrected JCPOA that the Trump administration ended in 2018 would provide rogue Iran with billions of dollars in exchange for at best only temporarily slowing nuclear development ... more money that Tehran can spend fomenting Middle East terror.

Ominously, this comes at a time when Tehran has essentially declared war on America by launching ballistic missiles near our Iraq consulate in Erbil over the weekend.

Russia, a JCPOA signatory and — paradoxically — also America's designated negotiator, has now walked away from talks following failures to open a loophole in Western sanctions levied against them in response to their Ukraine assault.

Russia's foreign minister Sergey Lavrov had demanded a written guarantee that sanctions "launched by the U.S. will not in any way harm our right to free, fully fledged trade and economic and investment cooperation and military-technical cooperation with Iran."

In any case, it's likely already too late for JCPOA to offer any free world security benefits in return for oil sanctions relief to help reduce self-inflicted skyrocketing U.S. petroleum prices and inflation.

The International Atomic Energy Agency reportedly believes that Iran has already produced about three-quarters of the amount of 90% enriched weapon-grade uranium needed for a nuclear weapon, and is weeks away from completion.

Apart from JCPOA, it's also worth noting that Russia has provided Iran with weapons, including an S-300 long-range surface-to-air missile system, Kilo-class submarines, T-72 tanks, BMP-2 infantry armored vehicles, Mi-17 helicopters, and various anti-tank systems.

From 1995 to 2005, more than 70 percent of Iran's arms imports came from Russia, according to data from the Stockholm International Peace Research Institute.

Whereas following Biden administration pressure, the United Arab Emirates has encouraged fellow OPEC+ alliance members (including Russia) to increase oil production, Saudi Arabia, the de facto leader, has so far resisted.

As noted in the Financial Times, only Saudi Arabia has the ability to significantly increase output, UAE to a lesser degree, and even a coordinated move "[wouldn't] provide enough spare capacity to fill a Russia-sized hole."

Meanwhile, some OPEC members, including Nigeria, Angola and Malaysia, have consistently failed to meet most recent production quotas agreed to last year.

Recognizing that Gulf states have been cautious to tread a neutral line between Moscow and Washington, Abu Dhabi officials are reportedly frustrated regarding what they perceive to be timid Biden administration sanction responses to attacks on the UAE by Iranian-backed rebels in Yemen, and failures to designate Houthis as a terrorist group.

Dr. Mohammed Al-Sulami, president of the International Institute for Iranian Studies, asks: "What if Western countries took steps — not as comprehensive as those taken against Russia, but let's say equivalent to 10% of those measures — would Iran have continued its hostile behavior?"

Al-Sulami adds, "Would it have succeeded in controlling four Arab capitals? Would the Iranian expansionist project in the region have withstood such steps? Would these non-military measures have prompted Tehran to change its behavior and become a normal country?"

U.S. JCPOA sanction relief, after all, is now being considered for the same Tehran that threatens death to Israel and to America in exchange for some temporary help in getting politically inflation-besieged American Democrats through upcoming congressional 2022 election challenges.

In their final analyses, Saudi Arabia and other OPEC+ members must ultimately determine which America serves their best long-term interests.

One of those Americas would return to strong uncompromised energy-independent leadership which supported the Abraham Accords and recognized the importance of "maintaining and strengthening peace in the Middle East and around the world based on mutual understanding and coexistence, as well as respect for human dignity and freedom, including religious freedom."

The other America — a weak vestige of its former self — views climate change as its "greatest existential threat," while making desperate deals with truly dangerous and destabilizing adversaries.

Such delusional priorities were recently expressed by former Obama administration Secretary of State and chief JCPOA architect John Kerry who said he hoped that "President Putin will help us to stay on track with what we need to do for the climate."

This is not the sort of American leadership that any peaceful Middle East or other nations should wish amid growing threats of a nuclear Iran and its ruthlessly expansionist Russian arms trade partner.

Nor is it the sort of leadership we should wish for ourselves.

SCIENCE & ENVIRONMENTAL POLICY PROJECT

The Week That Was March 12, 2022

Quote of the Week:
"*Learning never exhausts the mind.*"
– Leonardo da Vinci

****

Number of the Week:

Down 10.8% From 13,000,000 BPD

to 11,600,000 BPD

****

THIS WEEK:
By Ken Haapala, President Science & Environmental Policy Project (SEPP)

Scope: TWTW will begin by discussing a paper by W. A. van Wijngaarden and W. Happer and a video by van Wijngaarden explaining why, based on physical evidence from the atmosphere, the world has nothing to fear from developing countries in Asia greatly increasing the concentrations of greenhouse gases in the atmosphere, particularly carbon dioxide the gas essential for green plant life on this planet.

TWTW will explain why it is so impressed by the work of van Wijngaarden and Happer as an outstanding example of using proper science to address a complex scientific problem, even though their work has not been published by a leading western scientific journal. As exemplified by Science Magazine since the mid-1990s, published by the American Association for the Advancement of Science (AAAS), western journals are more interested in political conformity than they are in competent advances in physical science. Van Wijngaarden and Happer are highly regarded experts in Atomic, Molecular, and Optical (AMO) physics which includes the study of how certain molecules absorb and emit electromagnetic radiation. Greenhouse gases transmit visible sunlight but absorb various infrared colors. Their work calculates transmission of infrared radiation through the atmosphere to outer space.

TWTW will then present the first two of eight essays by AMO physicist Howard Hayden and will discuss others in later TWTWs. While van Wijngaarden and Happer discuss details of the IR spectra, Hayden looks at the overall results. The 1860s pioneer of spectroscopy, John Tyndall, named the atmospheric gases that prevent land masses from entering a deep freeze at night as greenhouse gases. They are essential for life on land.

TWTW will conclude by discussing how foolish the Biden administration must appear to major oil producers as it tries to replace the importation of oil and petroleum products from Russia. At current prices, oil producers in North America are very capable of expanding production to replace Russian oil, but the administration appears to be so blinded by its false beliefs that it is incapable of recognizing this important industry.

Greatly Exaggerated Effects: In their paper, "Relative Potency of Greenhouse Molecules," van Wijngaarden and W. Happer cut through a lot of nonsense by climate scientists who do not understand the greenhouse effect and how various concentrations of greenhouse gases change the effectiveness of other greenhouse gases. The abstract reads:

The forcings due to changing concentrations of Earth's five most important, naturally occurring greenhouse gases, H2O, CO2, O3, N2O and CH4 as well as CF4 and SF6 were evaluated for the case of a cloud-free atmosphere. The calculation used over 1.5 million lines having strengths as low as 10–27 cm. For a hypothetical, optically thin atmosphere, where there is negligible saturation of the absorption bands, or interference of one type of greenhouse gas with others, the per-molecule forcings are of order 10–22 W for H2O, CO2, O3, N2O and CH4 and of order 10–21 W for CF4 and SF6. For current atmospheric concentrations, the per-molecule forcings of the abundant greenhouse gases H2O and CO2 are suppressed by four orders of magnitude. The forcings of the less abundant greenhouse gases, O3, N2O and CH4, are also suppressed, but much less so. For CF4 and SF6, the suppression is less than an order of magnitude because the concentrations of these gases is very low. For current concentrations, the per-molecule forcings are two to four orders of magnitude greater for O3, N2O, CH4, CF4 and SF6 than those of H2O or CO2. Doubling the current concentrations of CO2, N2O or CH4 increases the forcings by a few per cent. A concentration increase of either CF4 or SF6 by a factor of 100 yields a forcing nearly an order of magnitude smaller than that obtained by doubling CO2. Important insight was obtained using a harmonic oscillator model to estimate the power radiated per molecule. Unlike the most intense bands of the 5 naturally occurring greenhouse gases, the frequency-integrated cross sections of CF4 and SF6 were found to noticeably depend on temperature.

In his November 25, 2020, talk to the Irish Climate Science Foundation, van Wijngaarden discusses his work with William Happer, explaining in a different way why there is no climate crisis and that adding CO2 and methane (CH4) to the atmosphere will not cause one. In that talk van Wijngaarden explains that concentrations of greenhouse gases vary with altitude. Only the concentration of CO2 is constant with altitude. The EPA declaring that the influence of methane on temperatures is X times that of CO2 is absurd. The EPA does not understand the greenhouse effect of different gases.

In the Troposphere, (from the surface to about 5 to 9 miles [8 to 14.5 km]), as altitude increases, the temperature declines at the rate of 6.5 C/km. This is called the lapse rate. Above that, in the stratosphere, the concentration of Ozone (O3) increases, causing slight temperature rises with increasing altitude in the stratosphere. From the top of the stratosphere (about 86 km) to the top of the atmosphere is the Mesosphere, where the temperature goes down slightly.

In discussing methane as described by HITRAN Line Intensities, van Wijngaarden brings up the fact N2O and, primarily, water vapor, interfere with the effectiveness of methane as a greenhouse gas. They must be considered together to get an accurate understanding of their effectiveness.

About 14 minutes into the video, van Wijngaarden discusses how they use the results of weather balloons to double check their work. The balloons can contain spectrometers that can measure infrared intensities at high altitudes. CO2 absorbs in frequencies from about 500 to 750 wavelengths per centimeter. At lower frequencies there is a disagreement between the observations and the calculations. This is an example of the necessity of good researchers always checking model results with experiment (observations, physical evidence).

Van Wijngaarden then explains that near the surface, where there is a great deal of water vapor, significant infrared energy in the water vapor frequencies is absorbed, but at slightly higher altitudes the energy escapes to space. By contrast, for the frequencies at which CO2 absorbs energy, that energy is quickly absorbed by CO2, and only escapes to space when emitted at high altitudes near 86km (50 mi.). At some frequencies, no energy is absorbed by greenhouse gases.

He then explains the difference between the Planck blackbody curve with a transparent atmosphere and the irregular Schwarzschild curve with greenhouse gases. These are discussed by Happer and are important to understanding the essays by Howard Hayden.

Correspondingly, cutting methane to zero or doubling it makes little difference in outgoing infrared radiation. Methane is not an important greenhouse gas, despite EPA's erroneous calculations. Van Wijngaarden's presentation will be discussed further in next week's TWTW.

A Significant Contribution: TWTW is impressed by the approach used by van Wijngaarden and Happer because they address the greenhouse effect as directly as possible and do not go through the convoluted process of understanding the earth's internal climate which has been changing for hundreds of millions of years. They use the appropriate field of physics, AMO, to address the issue. In earlier papers they use the appropriate mathematics, which includes calculus. Developed independently by Isaac Newton and Gottfried Leibniz, calculus gave Newton a dynamic form of mathematics that explained the motion of the planets and gravity. Static calculations were not sufficient.

Further, van Wijngaarden and Happer use the appropriate evidence, the HITRAN database, which is compiled from atmospheric observations, where the greenhouse effect occurs. Since greenhouse gas theory is not fully developed and the greenhouse effect varies with cloudiness, altitude, and latitude, the Schwarzschild curve can be developed only through observations, not theoretical calculations.

Also, van Wijngaarden and Happer test their model (calculations) against independent physical evidence, as explained, in part, by van Wijngaarden about 14 minutes into his presentation and in last week's TWTW. Nothing the UN Intergovernmental Panel on Climate Change (IPCC) and its followers have done approaches the rigor in identifying the changing greenhouse effect that van Wijngaarden and Happer have accomplished. To top things off, forty-two years of comprehensive atmospheric temperature observations by satellites show that the atmosphere is warming slowly, not significantly, contradicting claims of alarming global warming by climate modelers.

Strange Times: The Biden Administration seems to be so obsessed with the false climate crisis, which it proclaimed without any physical evidence, that it ignores that solutions to the problem of cancelling US imports of energy from Russia already exist in North America. Drilling in proven oil fields of the North Slope of Alaska and the oil sands of Canada can easily replace Russian oil. Gas fields of Texas and the Mid-Atlantic states can easily replace any natural gas the US receives from Russia. All the administration needs to do is to permit the development and transportation of these fuels.

Apparently, such a reversal of the policies of the administration are too much to expect. Instead, the administration has sent envoys to the Mid-East and to Venezuela in an effort to replace Russian sources. This has led Jason Kenney, the premier of the Canadian province of Alberta to state: "It's replacing dictator oil with more dictator oil." The climate does not care where the oil originates, and the physical science does not indicate that adding carbon dioxide to the atmosphere will cause a problem. The problem only exists in the imaginary world of climate models and their believers.

Number of the Week: Down 10.8% From 13,000,000 BPD to 11,600,000 BPD. According to the U.S. Energy Information Administration, before COVID US Field Production of Crude Oil stood at 13,000,000 BPD (barrels per day) from January to March 2020. On March 4, 2022, it was 11,600,000 BPD, a decline of 10.8%.

Imports of Crude Oil and Products from Russia peaked in May 2021 at 26,171,000 bbl. per month and fell to 12,569,000 bbl./month in December 2021, totaling 245,194,000 bbl. in 2021.

Imports from Canada peaked in December 2019 at 148,319,000 bbl./month, then fell to 112,554 in June 2020. In December 2021 it was close to its previous peak. Annual imports peaked at 1,617,636 in 2019 and fell to 1,584,269 in 2021. Annual Alaska Field Production of Crude Oil peaked in 1998 at 738,143,000 bbl. and has fallen almost every year since due to the lack of permits. It now stands at 159,623,000 bbl., down to 21.6% of its high. The oil is there, the leases are there, but the permits to drill are not. Washington is strangling the US oil industry.

The Science & Environmental Policy Project began in late 1990 as a research effort by atmospheric physicist S. Fred Singer and a handful of graduate students working out of a small office in downtown Washington, D.C. The Project had two goals: (1) to gather material for a book on global environmental issues, and (2) to conduct a survey of scientists affiliated with the UN Intergovernmental Panel on Climate Change to determine the extent of what was, even then, being touted as scientific "consensus" on global warming.

What the graduate students discovered with their survey convinced Dr. Singer to set his book aside and instead to circulate among senior members of the American Meteorological Society a "Statement by Atmospheric Scientists" on greenhouse warming, which was quickly endorsed by 46 leading climatologists and atmospheric physicists (and eventually by nearly 100). That statement, issued on February 27, 1992, drew widespread media attention and was cited more than 150 times in the press. It was the first inkling journalists had that there was no scientific consensus on the reality of a global warming. Indeed, there was raging debate.

The Science & Environmental Policy Project was incorporated in the state of Virginia in 1992, and established as a nonprofit, 501(c)3 educational organization in late 1993. Today, having expanded from that core of 46 scientists, it draws on an international network of some of the finest minds in science who donate their time to promoting sound, credible, peer-reviewed research as the only basis for the health and environmental policies that affect us all.

You can help in two ways:

1. Download SEPP reports, press releases, and articles and pass them on – to newspaper editors, journalists, educators, civic leaders, and others. Help stop the fearmongering and the distortion of science. This is the most important thing you can do.

2. Support SEPP with your tax-deductible contributions. The environmental pressure groups, which present so much wrong information, have a combined clout of more than $1 billion a year. The Science & Environmental Policy Project has had far-reaching impact on less than one-hundredth of one percent of that figure. It's money well and effectively spent.

Send your contributions to:

And thank you.

America Needs to Focus More on Merit and Less on "Fairness"

"Fairness" is a rabbit hole.

By John Hawkins, Nov 27

Many of the worst people in our society pretend to be obsessed with "fairness." Why? Because they realize how arbitrary "fairness" can be and they're looking to use that to get an advantage over other people. Life is intrinsically, inherently, unalterably "unfair" and it always will be. That's because as much as we obsess over what's "fair" and "unfair," "fairness" can only be achieved in certain limited situations, with limited rulesets, and even then, it's often not fully achievable.

For example, the closest thing to "fair" you can probably think of would be two people playing a video game. They start in the same place, with the same skill sets, and face the same challenges and opportunities. What could be more even than that, right? Except, is it really "even" if one player enjoys playing casually on weekends and the other plays 8 hours a day, every day because he has nothing better to do? Who's going to win every time those two go head-to-head? Other games are "pay to win." So, if you're willing to spend money, you can get better gear, better skills, and more powers that allow you to beat other plays. Don't even get me started on the in-game debates about which characters are "too strong" or "too weak," because those NEVER END.

Well, what about sports? That's a good example of fairness, right? You have preset rules, teams with equal numbers of players, set time limits – I mean, that has to be "fair," right? Well, no. Is it fair that men who claim to be women now get to compete against real women in women's sports? How is it fair that in the UFC, you're allowed to kick someone as hard as you can in the face, but you can't punch someone in the back of the head? What about illegal drugs? Lance Armstrong won 7 Tour-de-France titles, which would be enough to make him the greatest cyclist of all time if he hadn't gotten caught cheating. Of course, you could just as easily say (and would probably be correct from what I've heard) that all the top-level cyclists in Armstrong's era were using drugs, he just got caught. Besides, he had testicular cancer, so did the drugs really give him a big advantage compared to the other cheaters? How far down the rabbit hole do we want to go to figure out what's fair?

Here's a complaint about fairness that Black Lives Matter posted on Twitter:

Are we really going to play this game? If so, what's the "fair" point in history to stop and declare those people are the "rightful" owners of the land?

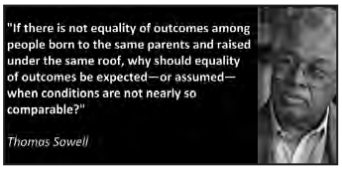
Oftentimes, complaints of unfairness rely upon only looking at one group's claims, while completely ignoring similar complaints from the people supposedly behaving "unfairly."

Is white privilege really better than black privilege, trans privilege, or gay privilege? Do we really live in a patriarchy, or could we make an even better case that we live in a matriarchy? We might say it's "unfair" for our enemies to deliberately target civilians, but they might just as easily reply that we're "cheating" by using planes and missiles instead of fighting up close and personal. The further you get away from the most basic questions of fairness, the more impossible it becomes to sort it all out.

Does that mean we should forget about fairness and live in a world without rules? No. Now here's the "but" you knew was coming.

Because of the nature of fairness, in most situations, if you try to take things beyond some very basic rules, it's going to quickly become unworkable. In a nation of 330 million people with many different backgrounds, ethnicities, economic statuses, mental abilities, physical abilities, desires, and goals, trying to cater to everyone's version of fairness is a recipe for disaster.

You can make a law against shoplifting, but if you try to say, "Well, I'm not going to enforce it against people that are poor or homeless," it's not going to work. You can split off women's and men's sports, but if you then make the definition of being a woman largely arbitrary, it's going to fail. If you want to say that legally and morally, every individual should be allowed to rise and fall on his merit, that may work imperfectly, but it's possible. Demanding that every group have exactly the same amount of success percentage-wise in order for it to be "fair" is not.



So, how should we be dealing with fairness?

As individuals, it's to acknowledge the world as it is and go from there.

The more time you spend listening to news sources that distort reality, choke on the fact that the world is "unfair," and allow yourself to become emotionally overwrought

Looming Embarrassment

continued from page 1

Oversight Committee leaders had planned to really tighten the thumbscrews.

At their October 2021 hearing, committee chair Carolyn Maloney (D-NY) and chief inquisitor Ro Khanna (D-CA) insisted that Big Oil commit to reducing US oil and gas production by 3-4% annually (50-70% total by 2050). Otherwise, they claimed, global temperatures will rise 1.5 degrees Celsius (calculated from the end of the Little Ice Age and beginning of the Industrial Revolution, both around 1850) – which "the science" says would be an "existential threat" to Planet Earth.

"I don't need" an "American apple pie speech" about "meeting the needs of society," Mr. Khanna told ExxonMobil CEO Darren Woods. Will Exxon reduce production? Yes or no? the congressman demanded.

During the February 8, 2022 hearing, the two legislators demanded that oil companies "live up to" the "climate pledges" they have made. Shell and BP, they said, have promised to go net-zero on all their greenhouse gas emissions. However, ExxonMobil and Chevron pledges apply only to emissions associated with drilling and production operations.

That is completely inadequate, Maloney and Khanna argued. Not only do these two American companies not "plan to reduce their oil production by a single drop." Their pledge ignores the "whopping 90%" of emissions that come from consumers burning the fuels they produce. The pledges and legislators also ignore emissions from China, India and other countries, which dwarf US emissions many times over.

The two companies should have diversified into "clean renewable" energy. That's how they can lower people's heating bills and prices at the pump, and climate-killing emissions, the legislators suggested.

Of course, Mr. Khanna added, in a sudden about-face, he supports President Biden's "decisive actions" to help lower gas prices," by asking OPEC, Saudi Arabia and Russia to increase oil production and "calling on all oil companies to temporarily increase production." (Foreign oil doesn't emit greenhouse gases?)

The legislators promised to hold a third hearing on March 8, when they would interrogate oil company executives "under oath," "aggressively investigate" the industry's role in fueling "the climate crisis," and demand that oil companies "stop funding climate disinformation." The March hearing would be Big Oil's "last chance to cooperate" with Congress, Ms. Maloney warned ominously.

Enter Mike Tyson, in the form of skyrocketing energy and food prices – and bullets and missiles flying in Ukraine. The chairwoman abruptly canceled the inquisition mere days before it was to be held. She and her Democrat colleagues clearly didn't want to be humiliated by unfolding events and the grilling they would likely receive from Republicans, witnesses and their constituents. Realities can be troublesome.

Even as post-Covid demand surged in an America and world that still rely on oil, gas and coal for 80% of their energy, Congressional Democrats, the White House, federal agencies and activist groups worked in consort to cancel pipelines, impose leasing and drilling moratoriums, slow-walk permits, and pressure financial institutions to stymie funding for oil and gas operations.

As they choked off production and supplies, oil, natural gas and gasoline prices nearly doubled during Mr. Biden's first year in office. The price of food and nearly all consumer products and services soared in response. Salaries are being hammered by inflation. Consumers (aka voters) voiced their outrage.

Then Russian forces invaded Ukraine, slaughtering civilians and sending millions fleeing to neighboring countries. President Biden continued importing 670,000 barrels of Putin crude oil and refined products every day. Gasoline hit $7 per gallon in some cities the day the hearing was to be held.

Finally, right when the congressional inquisition would have been underway, Mr. Biden finally issued an executive order banning imports of Russian crude oil, refined products and natural gas. Congress signaled it might codify the ban into law. Global oil prices shot to $110 per barrel.

The President could have told his federal regulators to get agency boots off the necks of American exploration, production and pipeline companies – and start expediting permits. He could have told climate activists, banks and financial institutions to pause their war on fossil fuels.

Instead, he's still trying to persuade Saudi Arabia, the United Arab Emirates and Putin ally Venezuela to increase their oil production, to keep prices from skyrocketing further. He's still using Russia to broker a new nuclear deal with Iran, thereby permitting the Islamist regime to sell more oil on the global market!

Amid cries of "Putin Price Hikes," the Biden Administration and congressional Democrats continue to obsess over the "climate crisis" and promote a rapid "transition" to "renewable" energy.

It's an exercise in distraction and magical thinking. Wind and sunshine are certainly clean and renewable. However, harnessing this widely dispersed, weather-dependent energy to meet huge and growing US and global energy needs requires millions of wind turbines, billions of solar panels, billions of battery modules and thousands of miles of new transmission lines that need enormous quantities of metals and minerals, which are absolutely not clean, renewable or sustainable.

Indeed, just Mr. Biden's initial 30,000 megawatts of offshore wind energy would require 110,000 tons of copper – plus massive amounts of cobalt, lithium, nickel, aluminum, steel, rare earth elements and other materials. Getting just the copper would require mining 25 million tons of ore. But federal bureaucrats and judges have already shut down three proposed U.S. copper mines. Again, that's just the copper.

How many tons of metals, minerals, ores and overburden will be required overall for wind turbines, solar panels, battery modules, transformers and transmission lines in an all-electricity Green New Deal economy? How much fossil fuel energy to do all this work? Where will the mining, processing and manufacturing take place? (Alaska, California and Colorado? Or China, Russia and Africa?)

How much environmental destruction, and child and slave labor, will be involved? What will these materials cost, as demand surges? How much land and wildlife will be impacted by the mining, factories, and industrial wind, solar and battery installations as far as the eye can see?

Green New Dealers don't have a clue, and don't care. They also figure they will be exempted from the "inconveniences." We will be the ones paying. We ought to care. The amounts are truly mind-boggling. For clues about the almost unfathomable impacts and costs, look here, here, here, here and here.

Europe and the United States already have minimal leverage (and credibility) over China and Russia on diplomatic matters, territorial ambitions – or open warfare. The vaunted Green New Deal would likely make America almost totally reliant on Chinese and Russian companies for "renewable" energy materials.

Media, academia and federal agencies are already populated by anti-fossil-fuel stalwarts. But making matters worse, Putin cronies have long funded clandestine money laundering operations to finance major disinformation campaigns by US and EU environmentalist groups, to undermine drilling, fracking and pipeline programs. The US Senate "Billionaires' Club" report, Environmental Policy Alliance's "From Russia with Love" analysis, articles by investigative journalists Ron Arnold and Lachlan Markay (here and here), and studies by the US National Intelligence Directorand US House Science Committee provide extensive, disturbing details that Democrats in Congress and the Administration have ignored.

The Ukraine invasion is prompting renewed attention to these nefarious activities benefitting the Sea Change Foundation, Sierra Club, Climate Action Network, NRDC and other groups.

The Maloney-Khanna Oversight Committee should investigate these money laundering and Green New Deal mining, cost and ecological issues – and leave the "climate crisis" and "price-gouging" fantasies to Hollywood horror and conspiracy movies. But don't hold your breath.

Paul Driessen is senior policy advisor for the Committee For A Constructive Tomorrow (www.CFACT.org) and author of Eco-Imperialism: Green Power – Black Death.

Life's Imponderables

By Gary L. Wickert

It was bound to happen. Like most parents, I had successfully fooled my children as long as I possibly could, feigning confidence, using rhetorical questions, and mastering the internet in order to convince them that I had the answers to all of their questions. Whether the issue was algebra homework, the opposite sex (or sexes), or competitive sports, they felt comfortable coming to me, confident that I would have the right answers.

A few years ago, my son – then a senior at Cedarburg High School – came home from school as usual and began doing his physics homework. The question came much like they had in the past, "Dad, how do I answer this question?" I don't remember the exact physics question, but it had something to do with Newton's Third Law and a series of force vs. time graphs. At first I was just silent. I read and re-read the question and the material in the textbook. My face went numb. I could feel his eyes waiting patiently for the answer. The words just wouldn't come and I couldn't think on my feet fast enough. Even the time-honored "Well, just think through the problem slowly and carefully" wouldn't work here. I didn't have a clue, and he knew it. Surprised by my silence, his mouth hung open. Then came my slow reply, "I don't know." The world would never again be the same for either of us. Dad didn't know.

To make matters worse, my youngest son – a sophomore at the time – was in the room at the time and overheard everything. Santa Claus, the Easter Bunny, and now the Omniscient Dad. In an instant, the last of the three most important social myths in life vanished. They knew the truth. Dad doesn't have all the answers. And if he didn't know this, what else might he not know?

The feeling of failure soon gave way to one of liberation, however. I used the experience to let them know that half the fun of knowing something was the journey spent learning it and that I too had to dig in order to discover things I didn't know. The lesson now became that once they realized they didn't know something—the spelling or meaning of a word, the speed of the earth's orbit around the sun, or the number of stars you coud see with the naked eye. The fun was in discovering the answers. It was a journey without end. I had come out of the closet and could now proudly proclaim that I too was puzzled by even some of life's simple imponderables.

There are many things I have no answers for. What happens to your Social Security number when you die? Why is Barbie's hair made of nylon, but Ken's hair is plastic? What exactly makes up the ever-mysterious "new car smell?" Why do pirates love parrots? You're your belt hold up your pants or do your belt loops hold up your belt? There was suddenly a flood of questions to which I had long refused to admit I just didn't have the answers.

Since the doctor always says to take two aspirins, why don't we just double their size? What's the real reason you have to turn off your laptop and iPod for takeoff? Why do the signal-strength bars on my cell phone change when I'm standing still? Where does all the white go when the snow melts? When would I use a No. 1 pencil? Why do we drive in a parkway, but park in a driveway? What color hair do bald men list on their driver license?

My kids are adults now and enjoy the search for truth like few do. They still ask questions in the most unusual places. A stroll down the aisle at Piggly Wiggly reveals a veritable cornucopia of things to scratch your head over. Why do Kellogg's Sugar Frosted Flakes and Kellogg's Corn Flakes both have 110 calories per ounce? Why do hot dogs come in packs of ten but hot dog buns are sold eight to the pack? Why can't they make a cracker package you can open with your hands? What does Campbell's do when they sell alphabet soup to countries that don't use our alphabet? Why does sour-cream have a use-by date? If a Snickers satisfies, why do they make a king size? Why is lemon juice made with artificial flavor, while dishwashing liquid is made with real lemons? Why are peanuts listed as an ingredient in plain M&Ms?

A trip to the zoo will leave the curious among us feeling even dumber than before. Can elephants jump? Why don't we ever see baby pigeons? Do fish drink or sleep? Why don't cats like to swim? Do penguins have knees? Do starfish have faces? Why do dogs have wet noses? Do they enjoy fetching the ball because they think we enjoy throwing it?

Life around the house now provides my boys with more than enough questions to make my wife and I both feel stupid. How do you throw away a garbage can? Why do we wash bath towels? Aren't we clean when we use them? How does soap clean clothes anyway? Does the dirt just slip off? Why do our three labs not like it when you blow in their face, but when they ride in the car they stick their head out the window? Why do hair shampoo instructions say "Lather. Rinse. Repeat"? If you did this, would you ever be able to stop? And if shampoo comes in so many colors, why is the lather on your head always white?

The more I look around, the more I realize how much I don't know. Why are certain parts of our bodies more ticklish than others? Why do fire stations have Dalmatians? What exactly is One Hour Martinizing? 24 hours in a day, 24 beers in a case. Coincidence? Can atheists get insurance for acts of God? Why do they sterilize the needles for lethal injections? What was the best thing before sliced bread? If you try to fail and succeed, have you succeeded or failed?

Sunday sermons provide plenty of introspective questions for my family and the ride home from church is now filled with dizzying questions which I usually can't answer. Will we recognize each other in heaven? Where exactly is hell? Where did God come from? Of course, responding to questions such as these played right into my role as a father, responding that such riddles can only be answered by studying God's Word and attending church faithfully. My boys cried foul upon hearing that answer.

My sons now tell me that watching television is even better at challenging them to make new discoveries than homework. For example, why did The Incredible Hulk's shirt always rip but his pants never did? Why doesn't Tarzan have a beard? If Superman could stop bullets with his chest, why did he always duck if the bad guy threw the gun at him?

My experience with the physics question may have cost me superhero status, but it opened the door to teaching my boys that life is full of opportunities to wonder. Mysteries are everywhere and being inquisitive about the world around us and everything in it makes life interesting and entertaining. Frank Colby once said that, "If a man dies without a question in his heart, what excuse is there for his continuance?" Apparently, I've got plenty of excuses.

COVID's Lesson No One Wants to Believe

By John Anthony

Since COVID arrived in the US in January 2020, American's lives have changed.

Fear spread while science crumbled in the face of masks, lockdowns, social distancing, and gene therapy. Emergency powers stripped our way of life in a manner no conquering nation could.

Lockdowns delayed diagnosis, one-size-fits-all hospital protocols ravaged families, and bodily freedom surrendered to vaccine mandates. Businesses shuttered, murders and depression rose, divisions grew, students fell behind, voter fraud skyrocketed, censorship emerged, and freedom of religion and speech were cast aside like an expired contract.

None of this had to happen.

By March, the Imperial College of London estimated that 2.2 million Americans could die without swift action. Already the push for vaccines was underway. Thirteen times the report mentioned the importance of a vaccine.

Taking swift action

As Americans feared the worst, Dr. Anthony Fauci, Director of the National Institute of Allergy and Infectious Diseases emerged as the face of the pandemic

• Social-distancing and lockdowns were implemented to reduce transmission and school children were told to wear masks to prevent dreaded asymptomatic spread.

• The CDC quickly took a sample of the virus to create a target for PCR tests that became the gold standard for identifying COVID-19 cases and deaths.

• By December 31, 2020, there were 312,000 cases per day and 3327 were dying.

Protecting the public from misinformation

Word spread that the virus was manufactured in a laboratory and partially funded by the NIH.

• Dr. Fauci aggressively defended Covid's natural origins.

• When a hospital study showed hydroxychloroquine might be an early treatment that could save lives, Dr. Fauci quickly quashed the report as "flawed". Other studies showed hydroxychloroquine was a risky drug causing dangerous heart arrhythmias and no benefit against COVID.

• Big tech joined by labeling any pro-HCQ remarks as "False Information" and deleting misleading accounts.

• Later to protect the people, Ivermectin was exposed as a horse de-wormer better suited to farm animals and met the same treatment as HCQ.

Birth of the SARS-2 vaccine

By December 2020 the initial Pfizer-Moderna trials were completed, and the FDA issued Emergency Use Authorization to the first "safe and effective" COVID-19 vaccines.

Dr. Fauci assured Americas when 75% to 80% of the population was vaccinated life could begin to return to normal.

The data begins to flow

As Americans slogged through the illness and closed businesses, studies from around the world began to pour in.

• The vaccines were not ending the pandemic. Nations like Israel and Scotland had record numbers of cases despite having some of the highest vaccination rates in the world

• People were dying post-vaccine, but the CDC assured these events were rare.

Hospitalization and death counts questioned

• During a House hearing the CDC Director admitted hospitals had a monetary incentive to inflate COVID counts.

• At the same July 2, 2020 hearing, the Assistant Secretary to HHS agreed, "Yes, there appear to be some misincentives to over-code."

• Hospitals received $50,000 for every patient admitted with a positive COVID test . Today there are add-on payments for COVID tests, Remdesivir, molnupiravir, ventilators, COVID deaths, and more.

• A devastating study showed of 900,000 patients hospitalized for COVID, showed nearly 2/3 suffered from obesity, hypertension, diabetes, and heart failure having little or nothing to do with COVID.

• In February it was discovered the CDC had withheld large amounts of important data that could help in medical decision-making. They argued the data could be "misinterpreted," was "not ready for prime time," and might lead to "vaccine hesitancy." In truth other countries have released far more thorough data and little of it bodes well for the vaccines.

PCR tests come under scrutiny

• The PCR tests came under scrutiny when a NYT article showed up to 90% of those who test positive with the PCR may not have COVID. Fact-checkers defended the tests, but other studied showed the same.

• An Oxford Study review verified the Time's article when just 26 of 90 patients who tested positive on the PCR, were found to have the COVID virus.

• The final nail in the PCR coffin was when the CDC admitted they never had an actual sample - page 40 ("no quantified virus isolates of the 2019-nV=COV were available for the CDC…") of the virus to create a target for the test to identify. Instead, they contrived one in a lab.

Given the high number of false positives and the fact the PCR was never provided the correct virus to target, it is likely all PCR tests should be disregarded. It is impossible to know the actual number who died from COVID except that it is far below official estimates. But that has not stopped the propaganda.

Rapid spread of disinformation

When the FDA or CDC release doubtful information, the media is quick to promote it as fact. That has had a devastating effect on the public's COVID insights.

• The American Medical Association and American Academy of Pediatrics have fully parroted the agency remarks with virtually no analysis.

New World Order

cont. from page 1

have the impression that the Biden Administration, NATO and the European Union deliberately want to maintain a situation of obvious imbalance, precisely to make impossible any attempt at a peaceful resolution of the Ukrainian crisis, provoking the Russian Federation to trigger a conflict. Herein lies the seriousness of the problem. This is the trap set for both Russia and Ukraine, using both of them to enable the globalist elite to carry out its criminal plan.

It should not surprise us that pluralism and freedom of speech, so praised in countries that claim to be democratic, are daily disavowed by censorship and intolerance towards opinions not aligned with the official narrative. Manipulations of this kind have become the norm during the so-called pandemic, to the detriment of doctors, scientists and dissenting journalists, who have been discredited and ostracized for the mere fact of daring to question the effectiveness of experimental serums. Two years later, the truth about the adverse effects and the unfortunate management of the health emergency has proven them right, but the truth is stubbornly ignored because it does not correspond to what the system wanted and still wants today.

If the world media have so far been able to lie shamelessly on a matter of strict scientific relevance, spreading lies and hiding reality, we should ask ourselves why, in the present situation, they should suddenly rediscover that intellectual honesty and respect for the code of ethics widely denied with COVID.

But if this colossal fraud has been supported and disseminated by the media, it must be recognized that national and international health institutions, governments, magistrates, law enforcement agencies and the Catholic hierarchy itself all share responsibility for the disaster – each in its own sphere by actively supporting or failing to oppose the narrative – a disaster that has affected billions of people in their health, their property, the exercise of their individual rights and even their very lives. Even in this case, it is difficult to imagine that those who have been guilty of such crimes in support of a pandemic that was intended and maliciously amplified could suddenly have a jolt of dignity and show solicitude for their citizens and their homeland when a war threatens their security and their economy.

These, of course, can be the prudent reflections of those who want to remain neutral and look with detachment and almost disinterest at what is happening around them. But if we deepen our knowledge of the facts and document them, relying on authoritative and objective sources, we discover that doubts and perplexities soon become disturbing certainties.

Even if we only want to limit our investigation to the economic aspect, we understand that news agencies, politics and public institutions themselves depend on a small number of financial groups belonging to an oligarchy that, significantly, is united not only by money and power, but by the ideological affiliation that guides its action and interference in the politics of nations and the whole world. This oligarchy shows its tentacles in the UN, NATO, the World Economic Forum, the European Union, and in "philanthropic" institutions such as George Soros' Open Society and the Bill & Melinda Gates Foundation.

All these entities are private and answer to no one but themselves, and at the same time they have the power to influence national governments, including through their own representatives who are made to be elected or appointed to key posts. They admit it themselves, when they are received with all the honors by heads of state and world leaders, respected and feared by these leaders as the true masters of the fate of the world. Thus, those who hold power in the name of the "people" find themselves trampling on the people's will and restricting their rights, in order to be obedient courtiers to masters whom nobody has elected but who nevertheless dictate their political and economic agenda to the nations.

We come then to the Ukraine crisis, which is presented to us as a consequence of Vladimir Putin's expansionist arrogance towards an independent and democratic nation over which he is trying to claim absurd rights. The "warmonger Putin" is said to be massacring the defenseless population, who have courageously arisen to defend the soil of their homeland, the sacred borders of their nation and the violated freedoms of the citizens. The European Union and the United States, "defenders of democracy," are therefore said to be unable not to intervene by means of NATO to restore Ukraine's autonomy, drive out the "invader" and guarantee peace. In the face of the "tyrant's arrogance," it is said that the peoples of the world ought to form a common front, imposing sanctions on the Russian Federation and sending soldiers, weapons and economic aid to "poor" President Zelenskyy, "national hero" and "defender" of his people. As proof of Putin's "violence," the media spread images of bombings, military searches, and destruction, attributing responsibility to Russia. And there's still more: precisely in order to guarantee a "lasting peace," the European Union and NATO are opening wide their arms to welcome Ukraine as members. And in order to prevent "Soviet propaganda", Europe is now blacking out Russia Today and Sputnik, in order to ensure that information is "free and independent."

This is the official narrative, to which everyone conforms. Being at war, dissent immediately becomes desertion, and those who dissent are guilty of treason and deserving of more or less serious sanctions, starting with public execration and ostracism, well experienced with COVID against those who are "un-vaxxed". But the truth, if you want to know it, allows us to see things differently and to judge the facts for what they are and not for how they are presented to us. This is a true and proper unveiling, as indicated by the etymology of the Greek word ἀλήθεια. Or perhaps, with an eschatological gaze, a revelation, an ἀποκάλυψις.

The expansion of NATO

First of all, it is necessary to remember the facts, which do not lie and are not susceptible to alteration. And the facts, however irritating they are to recall to those who try to censor them, tell us that since the fall of the Berlin Wall the United States has extended its sphere of political and military influence to almost all the satellite states of the former Soviet Union, even recently, annexing into NATO Poland, the Czech Republic, and Hungary (1999); Estonia, Latvia, Lithuania, Slovenia, Slovakia, Bulgaria and Romania (2004); Albania and Croatia (2009); Montenegro (2017); and North Macedonia (2020). The North Atlantic Treaty Organization is preparing to expand to Ukraine, Georgia, Bosnia and Herzegovina, and Serbia. Practically speaking, the Russian Federation is under military threat – from weapons and missile bases – just a few kilometers from its borders, while it has no military base in similar proximity to the United States.

To be considering the possible expansion of NATO into Ukraine, without thinking that it will arouse Russia's legitimate protests, is nothing short of puzzling, especially given the fact that in 1991 NATO pledged to the Kremlin not to expand further. Not only that: at the end of 2021, Der Spiegel published drafts of a treaty with the United States and an agreement with NATO on security guarantees (here, here and here). Moscow demanded legal guarantees from its Western partners that would prevent NATO from further eastward expansion by adding Ukraine to the alliance and also from establishing military bases in post-Soviet countries. The proposals also contained a clause on the non-deployment of offensive weapons by NATO near Russia's borders and on the withdrawal of NATO forces in Eastern Europe back to their 1997 positions.

As we can see, NATO has failed to keep its commitments to Russia, or has at least forced the situation at a very delicate moment for geopolitical balances. We should ask ourselves why the United States – or rather the American deep state which regained power after the electoral fraud that brought Joe Biden to the White House – wants to create tensions with Russia and involve its European partners in the conflict, with all the consequences we can imagine.

As General Marco Bertolini, former commander of the Joint Summit Operational Command, has lucidly observed: "The United States did not just win the Cold War but also wanted to humiliate [Russia] by taking everything that in a certain sense fell within its area of influence. [Putin] bore with the Baltic countries, Poland, Romania and Bulgaria [joining NATO]. Faced with Ukraine [joining NATO], which would have taken away any possibility of access to the Black Sea, he reacted" (here). And he adds: "There is a problem of the regime's stability, a situation has arisen with a fairly unlikely prime minister [Zelenskyy], one who comes from the world of entertainment." The general does not fail to recall, in the case of a US attack on Russia, that "the Global Hawks flying over Ukraine depart from Sigonella [Italy]; Italy is an American military base in large part. The risk is there, it is present and real" (here).

Interests arising from the blockade of Russian gas supplies

We should also ask ourselves whether, behind the destabilization of the delicate balance between the European Union and Russia, there are also economic interests, deriving from the need of EU countries to obtain American liquid gas (for which we also need the regasification plants which many nations are deprived of, and for which in any case we will have to pay much more) instead of Russian gas (which is more ecological).

The decision of Italian oil and gas company ENI to suspend investments in Gazprom's Blue Stream pipeline (from Russia to Turkey) also entails the deprivation of an additional source of supply, since it feeds the Trans-Atlantic Pipeline (from Turkey to Italy).

It therefore does not sound like a coincidence if, in August 2021, Zelenskyy declared that he considered the Nord Stream 2 pipeline between Russia and Germany as "a dangerous weapon, not only for Ukraine but for all of Europe" (here): bypassing Ukraine, it deprives Kyiv of about one billion euros per year in revenue from transit tariffs. "We view this project exclusively through the prism of security and consider it a dangerous geopolitical weapon of the Kremlin" the Ukrainian president said, agreeing with the Biden administration. American Undersecretary of State Victoria Nuland said: "If Russia invades Ukraine, Nord Stream 2 will not go forward." And so it has happened, not without serious economic damage to German investments.

The Pentagon's virological laboratories in Ukraine

Still on the subject of American interests in Ukraine, it is worth mentioning the virological laboratories located in Ukraine which are under the control of the Pentagon and where it seems that only US specialists with diplomatic immunity are employed directly under the American Ministry of Defense.

We should also remember the complaint made by Putin regarding the collection of genomic data about the population, which can be used for bacteriological weapons with

When George Soros, Sean Penn, the Entire Media, Republican Establishment & Democrats All Agree – Watch Out!

By John D. Guandolo

As half-baked "intellectuals" in American politics tell Americans "Russia bad, Ukraine good," red flags should go up in the minds of reasonable people that alert them a major propaganda campaign is underway.

From commie-loving actor Sean Penn to the former nazi billionaire George Soros who funds all that is unholy in America, all of us must stand with the Ukrainian people against the "evil Putin."

Republican Establishment leaders like House Minority Leader Kevin McCarthy wear Ukrainian flag pins, but not American flag pins, while telling us we must stand with the Ukrainian people.

The communists who inhabit the democrat party and all of their allies in the traditional media are regurgitating the same message.

Beware America. Keep an eye on the domestic situation and ask yourself why the tyrant leaders in the United States want you to focus on the Ukraine.

As the FBI, DHS, and the entire U.S. government apparatus focus their energy on targeting Patriots while empowering terrorists and anarchists, the Ukraine should be the last thing on our minds.

GOVERNMENT CIRCUS

To Republican Members of Wisconsin's State Assembly and Senate:

By Wisconsin Citizens Demanding Election Integrity, March 10, 2022

As citizens leaders determined to restore honesty and integrity in Wisconsin elections, we have two crucial questions for you:

First: On which side of history do wish to stand?

Second: Will you now personally act to decertify Wisconsin's fraud-ridden 2020 general election results, or will you opt to go down with a quickly sinking ship of corruption?

Decide now. Your seat at the State Capitol and your personal reputation both now hang in the balance. Our patience with stalling and dismissal has evaporated—and we are not alone.

The mechanics and irregularities of Wisconsin's November 2020 General Election should have raised your eyebrow from the start. As months have passed, the known corruption and illegalities plaguing that election have become so pervasive that the only way to ignore them is by willful blindness.

It's been known for well over a year that Assembly Speaker Robin Vos and then-Senate Majority Leader Scott Fitzgerald illegally signed off on the placement of hundreds of statutorily prohibited drop boxes. That these two "leaders" ignored all proper legislative process and decided state elections policy on their own is constitutionally and legally repugnant. That your silence and lack of action ultimately permitted Vos and Fitzgerald to get away with this clear violation of state law is worse.

With Special Counsel Gableman's recent report on widespread voter fraud in Wisconsin nursing homes, the 2020 election results have become morally repugnant as well. That this state's elderly and vulnerable were leveraged for political advantage adds another ugly stain to an already intolerable collection. You have likewise remained strangely silent on this appalling matter.

Your so-called Republican leadership continues to deceive, inveigle, and obfuscate—to insist all is well and bully the tiny handful of legislators who dare disagree. Wisconsin's election procedures are among the best in the nation, leadership claims. November 2020 is water under the bridge, they say. There's nothing to do now but fix any minor problems for next time, they emphatically assert. Yet, companion bills AB 946 and SB 946, advanced by Speaker Vos and his cronies in the Senate, will not only enhance corruption, they have suspiciously bypassed proper legislative procedure and public hearing.

And still, you willingly go along or remain silent.

The lies and evasion end today. Wisconsin legislators should never have certified the November 2020 election results. In the interest not only of preserving free and fair elections in this state but also restoring public confidence in them, we call you to account. We expect a clear signal from each of you, via press conference or press release, by end-of-day on March 17th.

Should you now rightly choose to decertify the November 2020 election results, constitutional experts are waiting to assist you, and we will support you.

However, should you continue to follow your corrupt leadership off an ethical and moral cliff, you will merit every single political consequence that ensues. We will come for your seat. And we will activate our extensive and growing grassroots network to ensure that we get it.

Truth of 2020 Election

continued from page 1

irrefutable.

Much of the data you present was accessible in December of 2020 prior to certification of the election results. This information clearly indicated a strong possibility of incorrect election outcomes, mandating investigation before any results could legitimately be certified. Why this investigation didn't occur before certification and why the results were certified at all require complete answers before our state can move forward with any future elections.

This criminal conspiracy against the voters of Wisconsin constitutes an immediate and ongoing threat to the sovereignty of our state and the liberty of its citizens. Based upon the width and breadth of the voter fraud demonstrated by the data you presented, this conspiracy had to be developed long before the November 2020 election involving hundreds if not thousands of individuals with likely assistance from external sources. All of these individuals involved must be tracked down and prosecuted to the fullest extent of the law. If these external sources prove to be foreign entities, these individuals aiding and abetting this voter fraud scheme committed treason.

Since the release of your report, a troubling cacophony of resistance has arisen from the Wisconsin Legislative leadership. Attempts by certain powerful individuals to minimize the implication of your findings conveys a staunch unwillingness to pursue appropriate action. Your findings indicate conclusively that the enormous amount of election fraud present clearly undermines the accuracy of the certified result, OBLIGATING the Wisconsin Legislature to de-certify the 2020 election results and pursue a widespread effort to uncover all of the elements of this criminal conspiracy and individuals involved. Until such information becomes known, no legitimate certification of the November 2020 election results can occur.

The strange unwillingness of certain members of the legislature to pursue the origins of this conspiracy and individuals involved will not be tolerated by the people of Wisconsin. Our individual rights and personal sovereignty depend upon this injustice being fully uncovered, truth disseminated and voting processes corrected to safeguard election integrity and future accuracy of results. Multiple efforts are being initiated to find answers to this apparent paradox.

Voter fraud of this magnitude eviscerates everything per the US Supreme Court. The de-certification of the Wisconsin 2020 election must immediately move forward and the path to uncovering the whole truth and nothing but the truth vigorously pursued. Our freedoms and Republic depend upon it.

Thank you again for your time and efforts in pursuing truth. Most people in Wisconsin understand the peril of the task you accepted and the arrows from the media and political establishment you humbly accepted. Our gratitude for what you've done on our behalf cannot be conveyed completely by words.

May God Generously Bless you and your family in the coming days and years.

Respectfully Submitted,

Wisconsin Citizens Demanding Election Integrity

Citizen Coalition to Target Seats of Republican Legislators Refusing to Decertify 2020 Election Results

(Madison, WI) Today, charter members of Wisconsin Citizens Demanding Election Integrity (WCDEI) issued an open letter, putting Wisconsin's Republican state legislators on notice that their coalition will work for the removal of those officials who do not now quickly move to decertify November 2020 election results.

Each Republican legislative office will receive an electronic copy of the open letter, which is also being widely distributed via social media. The letter can be viewed at: bit.ly/DecertifyWI

WCDEI has given legislators until end-of-day on March 17th to make their intentions regarding decertification plain to the people of Wisconsin, via either press conference or press release. Any state legislator failing to meet this deadline will be considered in violation of his or her sworn oath and will be prioritized for removal from office. The coalition's large and growing network of citizens will subsequently work to achieve those removals.

"Honest elections are foundational to an open and voluntary society," charter WCDEI member and Sheboygan County resident James Tesauro asserted this morning. "Evidence of the profound election and voter fraud that riddled Wisconsin's November 2020 election has only continued to mount over the past 16 months. If our legislators refuse to see and act on the truth, citizens have a duty to remove and replace them with individuals whose vision, principles, and commitment to a free society are fully intact."

Tesauro is no stranger to principle, having served 10 years in U.S. Army Aviation and attaining the rank of Captain.

"Decertification is the proper constitutional course for Wisconsin legislators to correct the gross error they made in certifying suspect election results that merited deeper investigation from the outset." Tesauro continued."

Kim Simac, another charter WCDEI member and longtime grassroots activist from Vilas County added: "State legislators each swear an oath to represent us, to uphold the laws of the land, and to defend our rights. With regrettably few exceptions, Republican state legislators have instead sat back and given election corruption a pass."

Tesauro and Simac's comments come just days after the release of Special Counsel Gableman's explosive and well-documented report on extensive voter fraud in Wisconsin nursing homes. Most of Wisconsin's Republican legislators have remained strangely silent on Gableman's findings.

"WCDEI's strong and growing coalition of citizens won't tolerate inaction and evasion of duty any longer," Simac concluded. "Time's up."

Wisconsin Citizens Demanding Election Integrity is a statewide volunteer coalition of grassroots leaders and citizen activists invested in ensuring free and fair elections in our state. The coalition includes people from a wide variety of backgrounds and possesses an impressive array of credentials and expertise, allowing cooperative action on multiple fronts. For more information, contact charter member Kim Simac at bk951@frontier.com or 715.891.3207.

Russia Collusion

continued from page 4

Russian energy agenda.28 Senator Cardin's work reiterates that "according to NATO officials, Russian intelligence agencies also reportedly provide covert support to European environmental groups to campaign against fracking for natural gas, thereby keeping the EU more dependent on Russian supplies."29

Additionally, as further evidence of Russian attempts to spread propaganda in the United States, U.S. Department of Justice officials have demanded that the U.S. based affiliate of RT register as a foreign agent under the Foreign Agents Registration Act (FARA).30 FARA requires that agents representing the interests of foreign governments in any political or quasi-political capacity disclose public communications aimed at influencing American political debate or public policy.31 Through local programs all over the world, RT and other news agencies operate as a government-funded arm of Russia in its attempts to destabilize and disrupt democratic institutions and the free market. Under FARA, the American people have the right to evaluate the "statements and activities of [persons acting as foreign agents] in light of their function as foreign agents."32

To that end, the Kremlin is attempting to make, as Senator Cardin's report states, "useful idiots" of unwitting environmental groups and activists in furtherance of its energy influence operations.33

Florida law makes possession of more than 2 voter ballots a felony

By WorldTribune Staff, March 14, 2022

The Florida legislature on March 9 passed a law that will make possession of more than two voter ballots a felony.

The new legislation will make possession of more than two ballots punishable with a fine of up to $50,000 and five years in prison.

The offense was previously a misdemeanor.

Florida Republican Gov. Ron DeSantis has said he will sign the bill into law.

In a November press release that announced his intention to propose the legislation, DeSantis said that the law is aimed at bolstering "election integrity" in the state.

Additional steps DeSantis called on the legislature to take to safeguard elections include:

• Establish an Office of Election Crimes and Security within the Department of State to investigate election crimes and fraud.

• Require timelines for supervisors of elections to clean the voter rolls of ineligible voters.

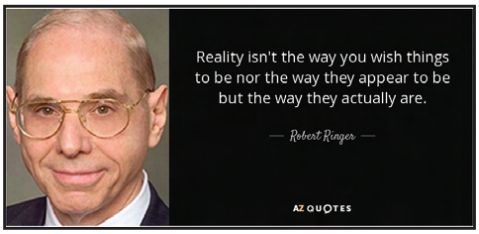
• Prohibit unsecure, haphazard drop box locations in Florida.

DeSantis in 2021 "worked with the Florida Legislature to strengthen voter identification, prohibit the mass mailing of ballots, ban ballot harvesting and prohibit private money (Zuckerbucks) from influencing elections in our state," the press release said.

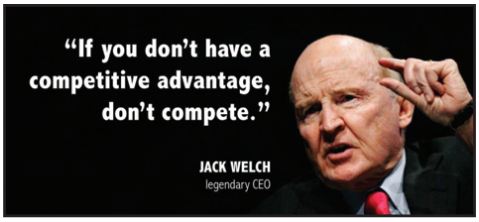
Focus more on Merit

continued from page 7

because you think the world needs to be different, the worse off you will be. Accept the world as it is, take advantage of it when possible, and recognize what you're up against when you try to change it.

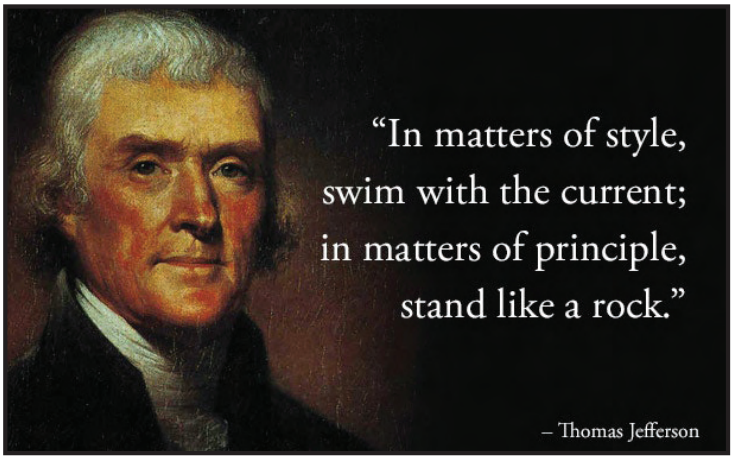


I'm someone who believes in trying to change the world, but I also view people like me as ants and the world as an elephant. Is it possible that enough people like me might bite the elephant's feet and make it move in one direction or another? Absolutely. But a lot of us will probably get stomped in the process and making the elephant take a step or two is a far cry from steering it. So, while I'm trying to change the world, I'm also looking for ways to succeed, prosper, and reach my full potential in the world as it is without abandoning the principles I believe in.



As to the country, we need to get back to first principles when it comes to fairness. We need to aim for equality under the law, try to maximize freedom, reward people based on merit, allow people to fail, and put the good of society ahead of catering to the whims of our weakest and most sensitive members. The further we get away from basic, simple rules of fairness, the more dysfunctional our government, morals, and culture become. In other words, if you have some weird, bank-shot theory about how everything is unfair for people like you because of something that happened 100 years before you were born or think that because you're supposedly some gender that didn't exist five years ago and societal fairness requires that everyone else adapt to you and your stupid pronouns, you're part of the problem.

To function properly, a nation needs basic, clear-cut concepts of fairness that everyone can understand. If you need to read three articles, consult with Twitter, listen to a college lecture, and watch a TikTok to conclude whether something is "fair" or not, you're doing it wrong. That's not about "fairness," it's about one group of people trying to get ahead at the expense of everyone else. The more time we spend rewarding merit and the less time we spend trying to have debates about increasingly obscure standards of "fairness," the better off the country will be.



Press Release: GOP Playing Games With Voters

EAU CLAIRE – Candidate for Lt. Governor released the following statement on actions by the leadership of the GOP:

"Once again the Republican led legislature moves to stifle the voice of Wisconsin Voters. GOP leadership yesterday moved regular order of business to special order of business to keep certain members from introducing resolutions to the body. It is because of political games like these that Wisconsin voters have lost confidence and trust in the Republican Party."

Yesterday's bills include SB934 which would give Electronic Registration Information Center (ERIC) access to voter information and make the organization a reliable source of information. ERIC's founder has been linked to Zuckerberg money that is the focus of 5 Wisconsin cities under investigation currently. SB935 would do away with voting deputies and allow any employee of a care facility to be a voting assistant under a "public health emergency or an incident of infectious disease." During the summer of 2020 there were multiple cities across the US including in Wisconsin who labeled racism a "public health emergency" With the language in this bill, racism could allow for special voting assistants being used to manipulate the vote of our vulnerable elderly population once again.

Noticeably absent from sponsorship of any bill was Rep. Timothy Ramthun's name. Currently he has two proposed bills that are sitting without support. One is to eliminate WEC and another is to do away with the fee to Wisconsin voter list. Both proposed bills are what the people of Wisconsin have been demanding, yet due to what seems to be retaliation towards Rep. Ramthun, no one will sign onto these proposed bills.

Once again, we see a Republican led effort to ignore the will of the people and to operate under an agenda held by GOP leadership. Sources have informed me the legislature at the end of this session will adjourn until after the November election. This is unacceptable and it is not representing the people of Wisconsin. By their own actions the GOP is proving to be operating as "we the party" and not in the interests of We the People.

Tracking Across Wisconsin

Eau Claire, Chippewa Falls, Green Bay, Milwaukee, Waukesha, River Falls, Neillsville, back to Green Bay, Antigo, and that was just the past week! I am committed to meeting and hearing from as many people as I can all over the state. Your voice matters and it is time someone gives voice to the people of Wisconsin. I am happy to drive all over the state and country if need be. This is about our freedom and restoring our liberty and I will not stop until we win this fight! I look forward to seeing and meeting you while out on the road!

ELECT
MARCELLO
MAYOR, CITY OF BROOKFIELD

We need Dave because ...
- Current Mayor supports ending State imposed property tax limits. This law prevents uncontrolled tax increases.
- Dave wants to lower taxes and improve communications and services.
- Parents and residents have a right to be heard by their elected officials at city hall and Elmbrook school district.

Dear Voter,
My campaign is founded on experience, and not just words. As a three-term Brookfield Councilman, I have a record of results. I know how Brookfield city government works. Even more importantly, I know how to make it work better for the best interests of every Brookfield resident.

Dave Marcello

PLEASE VOTE

Brookfield needs Dave Marcello because ...
1. He will put the common good of Brookfield residents first.
2. His past experience working with other city leaders is a big plus.
3. He is able to take diverse opinions and ideas and find solutions.
4. Our children's education is key and he has first-hand school board experience.
5. His public and private leadership experience is what this city needs.

I pledge to...
1. Put the common good of Brookfield residents ahead of the elite national companies and individuals.
2. Be fiscally responsible with your tax dollars and with other people's money.
3. Promise you only what is possible; not just what sounds good.
4. Build a culture of unity and service as your mayor.
5. Fix or replace the things that don't work well, and keep in repair those that do.

Spring Primary February 15, 2022
Spring Election April 5, 2022

Paid for by Marcello for Mayor, Joe Marcello Treasurer

The Price of Peaceful Resistance *cont. from page 1*

so obsessed with power that he views peaceful resistance as a terrorists' plot to overthrow "his" government. Trudeau forgets, it is the people's government. By imposing the Emergencies Act, the most powerful weapon in Canada's arsenal, Trudeau, without providing due process, intentionally sets out to destroy the lives of citizens by ensuring they can never work again or support their families.

Martin Luther King employed peaceful resistance for decades against unjust, racist laws, in the U.S to gain equality for minorities. He changed the face of the United States forever. Mahatma Gandhi took a 240-mile, peaceful walk from his village to the sea to secure salt for his people. Now the Freedom Convoy, a group of ordinary people, fed up with years of social restrictions and vaccine mandates, follow in the footsteps of King and Gandhi. Like King and Gandhi, the Freedom Convoy will find perusing freedom against a repressive government is very costly.

The common thread in the three peaceful resistance movements is the opposition to the unjust laws the powerful impose on citizens but not on themselves.

Leaders try to unify a nation, tyrants divide it. Trudeau spills his hate across Canada. Trudeau told parliament the Freedom Convoy is "very often misogynistic, racist, women-haters, science-deniers, the fringe" and that "Conservative Party members [who support the protests] … stand with people who wave swastikas, they can stand with people who wave the Confederate flag." How can a leader of a "free nation" have such disdain for its citizens?

Trudeau's beliefs and actions are opposed by the premiers of Alberta, Saskatchewan, Manitoba, and Quebec.

The philosopher George Santayana noted, "Those who cannot remember the past are condemned to repeat it." Trudeau's use of the Emergencies Act is a repeat performance of the arbitrary actions of the British Empire when it forbade the Indian population to manufacture or sell salt. It forced the poor of India to buy salt at a high cost from British merchants. Salt is essential to the human body's survival since it conducts nerve impulses, contracts and relaxes mussels, and provides for the proper balance of water and minerals.

Gandhi viewed the Salt Laws as an "inexcusable evil" and an example of how rulers arbitrarily impose their will on all aspects of human life. To challenge such laws, Gandhi walked to the sea to harvest salt from the beaches. As he walked, thousands followed. When he arrived at the sea he found a lump of salt-rich mud and announced "I am shaking the foundations of the British Empire." For weeks afterward his supporters boiled water to make salt and others sold it illegally.

Within a month Gandhi was arrested. His peaceful followers, however, ignored police warnings to stop making salt. The police rushed the protesters. The journalist, Webb Miller, described the police as raining: "blows on their heads…Not one of the marchers even raised an arm to fend off the blows. They went down like ten-pins." British authorities arrested 60,000 people.

While Gandhi was imprisoned for defying British law, the British suffered worldwide denunciation and humiliation for its brutal actions. Great Britain eventually had to negotiate with Gandhi. Great Britain eventually lost its empire.

The Canadian police were restrained with the cameras rolling. In the 21st century, government knows very well it does not have to beat people bloody in front of cameras to destroy their lives. The government needs only make laws so unjust and lacking in due process, that people cannot defend themselves.

To prove his power, Prime Minister Trudeau invoked the 1988 Emergencies Act, claiming the protest is an illegal blockade endangering public safety. The Act is to be used in situations that "seriously endangers the lives, health or safety of Canadians." The types of situations it is to address include espionage, foreign influence activities, serious threats of political violence, or acts intended to undermine or overthrow a constitutionally established government. None of these situations apply to peaceful protests whose offense is blocking streets and making noise.

The Emergencies Act allows the government to force banks to freeze the social media accounts that collect money to support the protesters, freeze the bank accounts of the protesters, seize their [300] trucks, revoke their driver's licenses, deny them insurance on their trucks, and imprison some for years. It also authorizes the government to deny citizens the right to assemble and prohibit travel in certain areas of the country. By cutting off the truckers' ability to make a living, Trudeau is executing their ability to live a normal life. Until a few days ago, no Canadian prime minister, in the thirty-four years since its enactment, invoked the Emergencies Act. But now Trudeau finds peaceful resistance to be so extreme as to be a threat to the state.

Before these peaceful resistance protests occurred, few people would associate the right to collect salt and the right to oppose vaccine mandates as causes igniting national struggles. Most leaders of democracy would never consider denying its citizens free access to an essential mineral, needed for life, such as salt. Likewise in a democracy, leaders respect that citizens have a right to free speech and to make personal health decisions based on the advice of their doctor, not political mandates. Yet, in the same English family, Great Britain and Canada, two powerful nations have had leaders so obsessed with having power over people that they imposed their arbitrary will on the most essential aspects of human life.

While the Freedom Convoy is dispersed, the despot remains wielding the brutal Emergencies Act slashing all dissent with a goal of killing freedom. The Freedom Convoy represents a threat to Trudeau, but Trudeau represents a threat to Canadian democracy.

Paraphrasing Oliver Cromwell's 1653 speech to the Rump Parliament: Trudeau – In the name of God, go!

William L. Kovacs has served as senior vice-president for the U.S. Chamber of Commerce, chief-counsel to a congressional committee, a partner in law D.C. law firms, and his book Reform the Kakistocracy is the winner of the 2021 Independent Press Award for Political/Social Change.

CPoW: Fighting Child Abuse in All Forms Across America

RIPON, WI – The Constitution Party of Wisconsin (CPoW) supports Texas Governor Greg Abbott's executive order directing the Texas Department of Family and Protective Services to investigate the use of cross-sex hormones, puberty blockers, and "gender-affirming" medical treatments on children.

A letter penned by Abbott dated February 22, 2022 reads, in part, "Consistent with our correspondence in August 2021, the Office of the Attorney General (OAG) has now confirmed in the enclosed opinion that a number of so-called "sex change" procedures constitute child abuse under existing Texas law. Because the Texas Department of Family and Protective Services (DFPS) is responsible for protecting children from abuse, I hereby direct your agency to conduct a prompt and thorough investigation of any reported instances of these abusive procedures in the State of Texas." The entire letter can be read online by typing in the search words "Greg Abbott Jaime Masters executive order letter" and at documentcloud.org.

The executive order comes from a legal opinion penned by Texas Attorney General Ken Paxton who stated that such transgender procedures constitute child abuse.

The CPoW agrees wholeheartedly (https://www.constitutionpartyofwisconsin.com/full-platform/#family2). While this executive order is a good first step, more needs to be done to stop the promotion of transgenderism and the mistreatment of children in general across America. Our party believes in defending the innocence and the physical, emotional, and mental well-being of children.

In a statement in The Guardian, the ACLU of Texas said, "Trans youth continue to be threatened in Texas by state leadership as part of a politically motivated misinformation campaign that harms children."

The CPoW states that it is those who advocate for gender mutilation and the injecting of chemicals into children's bodies in the name of "health care" that are the ones threatening the welfare of children. Leftists are the ones spreading misinformation about sex and gender through the teaching of gender studies in government run public schools. The CPoW declares that children are simply not emotionally mature enough or mentally developed enough to make life-altering decisions or to know what is best for them. All fifty states have laws on their books to shield children from a wide range of harms and to prosecute and punish adults who do harm to them.

"Organizations like the so-called American Civil Liberties Union who filed suit against Governor Abbott and his executive order have once again demonstrated their uncanny ability to choose the wrong side of any given issue, constitutional or social," said CPoW State Chairman Andrew Zuelke. He added. "The CPoW declares there are only two sexes, two genders, as God has ordained and that is biologically natural. There are not thousands or an infinite amount of genders as the LGBT – aka the Alphabet Soup People (ASP) – falsely claim."

UPI.com ran an article on March 4th titled, "As Texas targets transgender kids, their families scramble to find lawyers."

The CPoW says that these parents should be spending their time asserting their parental authority over their children, not giving in to their children in the name of "tolerance" or wasting time securing lawyers for lawsuits. In this case, the Texas governor and the attorney general are doing more to protect confused transgender children from harm than their actual parents are. Leftists are the ones targeting children, not us.

"Parents are being told by the ASP they must acquiesce to the wishes and decisions of their so-called transgender children and if they don't, they are transphobic. Just who are the adults here, the parents or their children?" Zuelke asks.

The CPoW believes part of being responsible parents involves protecting their children from harm, disciplining and lovingly correcting them whenever necessary, even if it "hurts their children's feelings" in the short term. Parents signing off on gender reassignment surgeries and giving their blessing and consent to the administration of hormone therapy and puberty blockers is not parenting. It is cowardice. It is child abuse and the CPoW condemns all forms of child abuse, be it physical, mental or emotional. We declare that transgenderism is not normal; it is a mental illness that should be addressed with constant, fervent prayer and by counselors who recognize transgenderism as gender dysphoria to be corrected.

The Constitution Party of Wisconsin, a recognized political party, promotes the Biblical principles referred to in the Declaration of Independence and United States Constitution. We promote these principles by guiding our members into positions of civil authority.

CPOW is:

- 100% Pro-Life-We will re-secure the Right to Life.
- 100% Pro-Family-One Man, One Woman marriage.
- 100% Pro-Gun-We reject any form of gun control.
- 100% Pro-Constitution-We will cut the federal government down to Constitutional size.
- 100% Pro-America-We favor American Liberty, America's economy and American energy for the American People.

Individual membership is $30.00 per person per year and Friend of the Party status is $20.00 per year.

New World Order

cont. from page 9

genetic selection (here, here and here). Information about the activity of laboratories in Ukraine is obviously difficult to confirm, but it is understandable that the Russian Federation considered, not without reason, that these laboratories could constitute an additional bacteriological threat to the safety of the population. The U.S. Embassy has removed all files related to the Biological Threat Reduction Program from its website (here).

Maurizio Blondet writes:

Event 201, which simulated the pandemic explosion a year before it happened, was attended (along with the usuals, Bill and Melinda) by the apparently inoffensive John Hopkins University with its blessed Center for Health Security. The humanitarian institution had for a long time a less innocent name: it was called Center for Civilian Biodefence Strategies and did not deal with the health of Americans, but rather with its opposite: the response to military attacks of bio-terrorism. It was practically a civil-military organization. When it held its first conference in February 1999 in Crystal City in Arlington [Virginia], where the Pentagon is located, it brought together 950 doctors, military personnel, federal officials and health officials to participate in a simulation exercise. The aim of the simulation is to counter an imagined "militarized" smallpox attack. It is only the first of the exercises that will blossom in Event 201 and in the Pandemic Imposture (here).

Experiments also emerge on the Ukrainian military (here) and interventions by the American Embassy regarding the Ukrainian Prosecutor Lutsenko in 2016 so that he would not investigate "a billionaire round of funds between G. Soros and B. Obama" (here).

An indirect threat to China's expansionist ambitions on Taiwan

The current Ukrainian crisis entails secondary, but no less serious, consequences on the geopolitical balance between China and Taiwan. Russia and Ukraine are the only producers of palladium and neon, which are indispensable for the production of microchips.

Moscow's possible retaliation has attracted more attention in recent days after market research group Techcet published a report highlighting the dependence of many semiconductor manufacturers on materials of Russian and Ukrainian origin such as neon, palladium and others. According to Techcet's estimates, more than 90% of U.S. supplies of semiconductor neon come from Ukraine, while 35% of U.S. palladium comes from Russia. […] According to the US International Trade Commission, neon prices rose by 600% before Russia's annexation of the Crimean peninsula in 2014, because chip companies relied on some Ukrainian companies […]

If it is true that a Chinese invasion of Formosa would put the global technology supply chain at risk, it is also true that a sudden shortage of raw materials from Russia could stop production, so as to make the island lose the "microchip shield" and induce Beijing to attempt the annexation of Taipei. (SOURCE)

Biden's conflict of interest in Ukraine

Another issue that we tend not to analyze in depth is that related to Burisma, an oil and gas company operating on the Ukrainian market since 2002.

[D]uring the American presidency of Barack Obama (from 2009 to 2017) his right hand man with a "delegation" to handle international politics was Joe Biden, and it is since then that the "protection' offered by the Democrat US leader was given to Ukrainian nationalists, a line that created the irreconcilable disagreement between Kiev and Moscow. […] It was Joe Biden in those years who carried out the policy of bringing Ukraine closer to NATO. He wanted to take away political and economic power from Russia. […] In recent years, Joe Biden's name has also been associated with a scandal over Ukraine that had also shaken his candidacy. […] It was April 2014 when Burisma Holdings, the largest energy company in Ukraine (active in both gas and oil), hired Hunter Biden as a consultant […] with a salary of $50,000 a month. All transparent, except that during those months Joe Biden continued the American policy aimed at regaining possession by Ukraine of those areas of the Donbass that have now become Republics recognized by Russia. The Donetsk area is believed to be rich in unexplored gas fields that have been targeted by Burisma Holdings. An international policy intertwined with the economic one that made the American media turn up their noses in those years (SOURCE).

Democrats claimed that Trump had created a media scandal to harm Biden's campaign, but his accusations turned out to be true. Joe Biden himself, during a meeting at the Rockefeller Council for Foreign Relations, admitted to having intervened on then-President Petro Poroshenko and Prime Minister Arsenij Yatseniuk to prevent investigations into his son Hunter by Procurator General Viktor Shokin. Biden had threatened "to withhold a billion dollars loan guarantee in the United States during a December 2015 trip to Kiev," reports the New York Post. "If [the Procurator General Shokin] is not fired, you will not have the money" (here and here). And the Prosecutor was effectively fired, saving Hunter from further scandal.

Biden's interference in Kyiv politics, in exchange for favors to Burisma and corrupt oligarchs, confirms the current US President's interest in protecting his family and image, fueling disorder in Ukraine and even a war. How can a person who uses his role to take care of his own interests and cover up the crimes of his family members govern honestly and without being subject to blackmail?

The Ukrainian nuclear question

Finally, there is the issue of Ukrainian nuclear weapons. On February 19, 2022, at a conference in Munich, Zelenskyy announced his intention to end the Budapest Memorandum (1994), which prohibits Ukraine from developing, proliferating and using atomic weapons. Among the other clauses of the Memorandum, there is also the one that obliges Russia, the United States and the United Kingdom to refrain from using economic pressure on Ukraine to influence its policy: the pressure of the IMF and the United States to grant economic aid in exchange for reforms consistent with the Great Reset represent a further violation of the agreement.

The Ukrainian Ambassador in Berlin, Andriy Melnyk, argued on Deutschlandfunk radio in 2021 that Ukraine needed to regain nuclear status if the country failed to join NATO. Ukraine's nuclear power plants are operated, rebuilt and maintained by the state-owned enterprise NAEK Energoatom, which completely ended its relationship with Russian companies between 2018 and 2021. Its main

Continue reading on page 15

New World Order

cont. from page 14

partners are companies that can be traced back to the US government. It is easy to understand how the Russian Federation considers the possibility of Ukraine acquiring nuclear weapons as a threat and demands Kyiv's adherence to the non-proliferation pact.

The color revolution in Ukraine and the independence of Crimea, Donetsk and Lugansk

In 2013, after the government of President Viktor Yanukovych decided to suspend the association agreement between Ukraine and the European Union and to forge closer economic relations with Russia, a series of protest demonstrations known as Euromaidan began, which lasted several months and culminated in the revolution that overthrew Yanukovych and led to the installation of a new government. It was an operation sponsored by George Soros, as he candidly told CNN: "I have had a foundation in Ukraine since before it became independent of Russia; this foundation has always been in business and has played a decisive role in today's events" (here, here and here).

This change of government provoked the reaction of Yanukovych's supporters and of a part of the Ukrainian population opposed to the pro-Western shift of Ukraine, which had not been wanted by the population but was obtained by a color revolution, of which there had been general rehearsals in previous years in Georgia, Moldova and Belarus.

Following the clashes of May 2, 2014, in which nationalist paramilitary fringes (including those of Pravyi Sektor) also intervened, there was also the massacre in Odessa. The Western press also spoke of these terrible events in a scandalized way; Amnesty International (here) and the UN denounced these crimes and documented their brutality. But no international court initiated any proceedings against those responsible, as is intended to be done today against the alleged crimes of the Russian army.

Among the many agreements not respected is also the Minsk Protocol, signed on September 5, 2014 by the Trilateral Contact Group on Ukraine, composed of representatives of Ukraine, Russia, the Donetsk People's Republic and the Lugansk People's Republic. Among the points of the agreement was also the removal of armed illegal groups, military equipment, as well as fighters and mercenaries from the territory of Ukraine under the supervision of the OSCE and the disarmament of all illegal groups. Contrary to what was agreed, neo-Nazi paramilitary groups are not only officially recognized by the government, but their members are even given official assignments.

Also in 2014, Crimea, Donetsk and Lugansk declared their independence from Ukraine – in the name of self-determination of peoples recognized by the international community – and declared themselves annexed to the Russian Federation. The Ukrainian government still refuses to recognize the independence of these regions, sanctioned by popular referendum, and leaves the neo-Nazi militias and the regular military forces themselves free to rage against the population, since it considers these entities as terrorist organizations. It is true that the two referendums of November 2, 2014 constitute a stretching of the Minsk Protocol, which provided only for a decentralization of power and a form of special status for the Donetsk and Lugansk regions.

As Professor Franco Cardini recently pointed out, "on February 15, 2022, Russia delivered to the United States a draft of a treaty to end this situation and defend the Russian-speaking populations. Wastepaper. This war began in 2014" (here and here).

And it was a war in the intentions of those who wanted to fight the Russian minority of Donbass: "We will have a job and pensions, and they will not. We will receive bonuses for having children, and they will not. Our children will have schools and kindergartens; their children will stay in the basements. In this way we will win this war," said President Petro Poroshenko in 2015 (here). It will not escape notice that these measures are similar to the discrimination against the so-called "un-vaxxed," who have been deprived of work, pay and education. Eight years of bombing in Donetsk and Lugansk, with hundreds of thousands of victims, 150 dead children, and very serious cases of torture, rape, kidnapping and discrimination (here).

On February 18, 2022 the Presidents of Donetsk and Lugansk, Denis Pushilin and Leonid Pasechnik, ordered the evacuation of the civilian population of their provinces into the Russian Federation due to the ongoing clashes between the Donbass People's Militia and the Ukrainian Armed Forces. On February 21, the State Duma (Lower House of the Russian Parliament) unanimously ratified the treaties of friendship, cooperation and mutual assistance introduced by President Putin with the Donetsk and Lugansk People's Republics. At the same time, the Russian President ordered the sending of troops from the Russian Federation to restore peace in the Donbass region.

Here one may wonder why, in a situation of blatant violation of human rights by neo-Nazi military forces and paramilitary apparatuses (who fly flags bearing swastikas and display the effigy of Aldolf Hitler) against the Russian-speaking population of the independent republics, the international community feels obliged to consider the intervention of the Russian Federation worthy of condemnation, and indeed to blame Putin for the violence. Where is the much-vaunted right of the people to self-determination, which was held valid on August 24, 1991 for the proclamation of Ukraine's independence and recognized by the international community? And why are we scandalized today by a Russian intervention in Ukraine, when NATO carried out the same sort of thing in Yugoslavia (1991), Kosovo (1999), Afghanistan (2001), Iraq (2003), and in Libya and Syria (2011), without anyone raising any objections? Not to mention that in the last ten years Israel has repeatedly hit military targets in Syria, Iran and Lebanon to prevent the creation of a hostile armed front on its northern border, and yet no nation has proposed imposing sanctions on Tel Aviv.

It is dismaying to see with what hypocrisy the European Union and the United States – Brussels and Washington – are giving their unconditional support to President Zelenskyy, whose government for eight years now has continued to persecute Russian-speaking Ukrainians with impunity (here), for whom it is even forbidden to speak in their own language, in a nation that includes numerous ethnic groups, of which those who speak Russian represent 17.2%. And it is scandalous that they are silent about the use of civilians as human shields by the Ukrainian army, which places anti-aircraft positions inside population centers, hospitals, schools and kindergartens precisely so that their destruction can cause deaths among the population.

The mainstream media is careful not to show images of Russian soldiers helping civilians reach safe positions (here and here) or organizing humanitarian corridors, which Ukrainian militias fire upon (here and here). Just as it is also silent about the settling of scores, massacres, violence and theft by fringes of the civilian population, to whom Zelenskyy has given weapons: the videos that can be seen on the internet give an idea of the climate of civil war that has been artfully fueled by the Ukrainian Government. To this we may also add the convicts released to be drafted into the Army and also the volunteers of the foreign legion: a mass of fanatics without rules and without training that will contribute to worsening the situation, making it unmanageable.

President Volodymyr Oleksandrovych

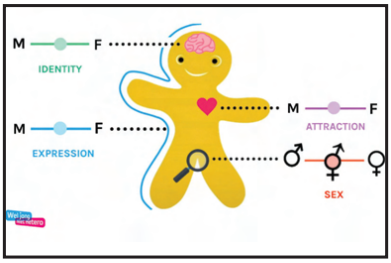
The Genderbread Person may seem innocent, but it teaches kids very dangerous concepts

The Genderbread Person was a concept developed to sell gender ideology to kids

(LifeSiteNews) — You have certainly heard of the Gingerbread Man. You may not have heard of the Genderbread Man. Or — pardon me — Genderbread Person. If your children attend a public school anywhere in North America, however, they likely have. The Genderbread Person was a concept developed to sell gender ideology to kids. As they explain it at genderbread.org:



So, you want to better understand gender, or need help explaining it to someone else? Used by — and contributed to by — countless people around the world and throughout the decades, the genderbread person (and all of the different evolutions of it, and ideas it evolved from) is a wonderful way to start an important conversation. While the versions created by Sam Killermann (many of which are featured on this site), are the most popular, the idea goes far beyond him, and is a creation of the commons.

The entire purpose of the Genderbread Person is simple: To teach kids that "anatomical sex," which is "comprised of things like genitals, chromosomes, and hormones" is not related to "gender identity," which is "your psychological sense of self … who you, in you heard, know yourself to be, based on how much you align (or don't align) with what you understand to be the options for gender." And neither of these have anything to do with "attraction," which can mean anything at all.

To sum up: The Genderbread Person is a teaching tool to inculcate kids into a worldview that tells them they can choose whatever gender they want to be (and there are scores of options); that these genders are functionally irrelevant to their bodies; and that both their "gender" and their body are irrelevant to their sexuality. This is being taught to very young children in schools from the United Kingdom to Canada, from the Royal Marines to the civil service, from Australia to the United States.

The Genderbread Person's latest appearance is in the Hadley Public Schools in Massachusetts. The district's sex-ed curriculum has included a 2018 YouTube video created by a Belgian LGBT group. According to the video:

Sex is biologically determined and has everything to do with what's inside of your pants. It is often assumed that everyone is born

Tucker: The Pentagon is lying about bio labs in Ukraine

This is a rush transcript of "Tucker Carlson Tonight" on March 9, 2022. This copy may not be in its final form and may be updated.

TUCKER CARLSON, FOX NEWS CHANNEL HOST: Good evening and welcome to TUCKER CARLSON TONIGHT.

If you had told us just four days ago that the Biden administration was funding secret bio labs in Ukraine of all places, we would not have believed you. Yes, I don't think we're going to put that on TV. No thanks.

Then if you told us that not only did the administration fund the secret bio labs in Ukraine, but that they then failed to secure the deadly contents of those labs before the Russian invasion, an invasion they knew was coming, an invasion they helped encourage, if you had told us that four days ago, we would have dismissed you as a nut.

It was just too preposterous. We will not want anything to do with a story like that. There's no way it could be true. It's too far out.

In any case, we already knew for a fact that that story was false. How do we know that? Because we read "U.S.A. Today," America's newspaper. Within hours of the Russian invasion, "U.S.A. Today" published a rebuttal to all those crazies who were yammering on about secret Ukrainian bio labs. Here was the headline: "Fact check: False claim of U.S. bio labs in Ukraine tied to Russian disinformation campaign."

So if you look carefully at the story, and we did, because we were interested, you notice that this fact check was sourced to Ukrainian government unnamed officials, and then Biden's State Department officials. So these were not exactly objective sources on the subject. But still, the story seemed definitive. It was totally emphatic quote, "Russia has teamed up with China to further amplify the false claim of U.S. labs in Ukraine."

Okay, "U.S.A. Today" says it is Russian disinformation. Maybe it is, on to the next story. But the fact checks didn't stop. That was weird. We kept seeing the same fact check again and again. It was almost like, despite endless official clarification, some people refused to believe the Biden administration. They preferred Russian propaganda instead.

We assumed they must be QAnon members. We assume that because "Foreign Policy" Magazine told us that.

According to "Foreign Policy," QAnon, whatever that is, was frantically disseminating, quote, "False claims of U.S. bio warfare labs in Ukraine." Those labs obviously didn't exist. It was all just another lie from the Russians who lie for a living.

Then the European Union weighed in, throwing its credibility behind the same claim. "These are conspiracy theories," the E.U. told us. They are lies spread by Putin. An E.U. spokesman then reminded us that, quote, "The credibility of information provided by the Kremlin is in general, very doubtful and low." That was good to know.

Quote, "Russian disinformation has a track record of floating manipulative narratives about biological weapons and alleged secret labs." Yes, we're not going to do a segment about secret labs in Ukraine. The last thing we want to do on this show is traffic in Russian disinformation spread by QAnon, so we took a pass on that story.

And that's where things stood until yesterday, when we had to tune into a hearing of the Senate Foreign Relations Committee. Toria Nuland was testifying so we were interested. Nuland is one of the people who brought us the Iraq War, never apologized for that, and kept getting promoted, because that's how D.C. works.

Victoria Nuland is now Joe Biden's Undersecretary of State in charge of Ukraine, and she knows a lot about Ukraine. In 2014 Toria Nuland engineered a coup in Ukraine in the name of democracy, of course. So she is the highly informed source about Ukraine.

So she was having this colloquy with Senator Marco Rubio of Florida during her testimony. And at one point, Rubio took attack that we were not expecting at all. He asked Nuland if Ukraine had biological weapons. We never imagined Ukraine would have biological weapons. Why would Ukraine have bio weapons?

So it seemed like a pretty strange question. But it wasn't half as shocking as the answer he got. Watch what Toria Nuland said.

(BEGIN VIDEO CLIP)

SEN. MARCO RUBIO (R-FL): Does Ukraine have chemical or biological weapons?

VICTORIA NULAND, U.S. UNDER SECRETARY OF STATE FOR POLITICAL AFFAIRS: Ukraine has biological research facilities, which in fact, we are now quite concerned Russian troops, Russian forces may be seeking to gain control of, so we are working with the Ukrainians on how they can prevent any of those research materials from falling into the hands of Russian forces should they approach.

(END VIDEO CLIP)

CARLSON: Does Ukraine have biological weapons? Oh, Ukraine has biological research facilities. What? You mean secret bio labs like the secret bio labs Ukraine definitely doesn't have? Ukraine has those? Yes, it does.

And not only does Ukraine have secret bio labs, Toria Nuland said, whatever they're doing in those labs is so dangerous and so scary that she is quote, "quite concerned" that the so-called research material inside those bio labs might fall into the hands of Russian forces.

I am not trying to use profanity on the air to describe our reaction. Our jaws dropped. Let's leave it there.

Under oath in an open committee hearing, Toria Nuland just confirmed that the Russian disinformation they've been telling us for days is a lie and a conspiracy theory and crazy and immoral to believe, is in fact, totally and completely true. Whoa.

You don't hear things like that every day in Washington. Talk about a showstopper and a dozen questions instantly jumped to mind. What exactly were they doing in these secret Ukrainian bio labs?

Ukraine is the poorest country in Europe, it's hardly a hotbed of biomedical research. We're assuming these weren't pharmaceutical labs, probably not developing new leukemia drugs.

From your answer, Toria Nuland, we would assume because you all but said it that there is a military application to this research. They were working on bio weapons.

Again, your answer suggests that. Why would we fund something like that in Ukraine? And why didn't you secure the contents of these bio labs before the Russians arrived as you knew they would? And then why did you go out of your way to lie to the American public about all of this?

If the quote "research materials" in these labs were to escape somehow, and you seem very concerned about that, what would be the effect on Ukraine and then on the rest of the world? How can we prepare for the consequences of that, this thing that you're worried about? Shouldn't we be preparing?

Because as it turns out, we've just spent the last two years living with a pathogen to begin in another foreign bio lab funded by the United States government secretly. So this question is on our mind, it seems fair.

Now, that's some of what we would have asked if we were U.S. senators, which we're not, yes, there's a time limit, time limit it be damned, because this is kind of important.

But Rubio did not ask those questions. Instead, he changed the subject and told us once again that Vladimir Putin is bad. Watch.

(BEGIN VIDEO CLIP)

RUBIO: If there's a biological or chemical weapon incident or attack inside of Ukraine, is there any doubt in your mind that 100 percent it would be the Russians that would be behind it?

NULAND: There is no doubt in my mind, Senator, and it is classic Russian technique to blame on the other guy, what they're planning to do themselves.

(END VIDEO CLIP)

CARLSON: Okay, get a pen. It's a classic Russian technique to blame on the other guy, what they are planning to do themselves. That's what Toria Nuland said. We almost laughed out loud.

So what you're saying Toria Nuland? If, for example, you were funding secret bio labs in Ukraine, but wanted to hide that fact from the people who are paying for it, in whose name you're doing it, then you might lie about it by claiming the Russians were lying about it. In other words, you might mount a disinformation campaign by claiming the other guy was mounting a disinformation campaign.

Is that what you're saying, Toria Nuland?

It's pretty funny. What's not funny is that this is all entirely real.

We invited Marco Rubio on the show tonight to tell us what he knows about these bio labs. He declined to come. That invitation remains open.

U.S. Under Secy. Of State Nuland Confirms Bioweapons Labs In Ukraine

OAN Newsroom

UPDATED 1:41 PM PT – Thursday, March 10, 2022

The Biden administration has continued to deny that the U.S. had any involvement with chemical weapons labs in Ukraine, yet the U.S. Under Secretary of State confirmed their existence.

State Department Under Secretary for Political Affairs Victoria J. Nuland speaks during a briefing at the State Department in Washington, Jan. 27, 2022. (AP Photo/ Susan Walsh, Pool)

This comes as China claims it's concerned about an alleged biological weapons development program in Ukraine. On Thursday, China's Foreign Ministry spokesperson Zhao Lijian echoed Russian allegations of a U.S.-run chemical and biological warfare laboratory in Ukraine. He called for its immediate inspection.

"We urge the U.S., once again, to fulfill its international obligations, make comprehensive clarifications on its domestic and foreign biological military activities, accept multilateral verification, and complete the destruction of its stockpile of chemical weapons as soon as possible," Lijian stated.

While the Pentagon has rejected those allegations, Under Secretary of State Victoria Nuland confirmed the existence during a hearing on Capitol Hill just days ago while referring to them as biological research facilities.

"Ukraine has biological research facilities which we are now quite concerned Russian troops, Russian forces, may be seeking to gain control of," she explained. "So we are working with Ukrainians on how they can prevent any of those research materials from falling into the hands of Russian forces should they approach."

Further, a U.S. National Academy of Sciences article reported that in 2005 then-Sen. Barack Obama negotiated the construction of a level three bio-safety lab in Odessa, Ukraine. The Interim Central Reference Lab was geared to handle "especially dangerous pathogens."

Nuland's statement comes as the U.S. claims any allegations of a bio-lab in Ukraine are "misinformation and propaganda." Pentagon spokesman John Kirby even denied the claims, seemingly going against what the Under Secretary of State said just days prior. While speaking to reporters Wednesday, Kirby echoed the White House in calling the claims false.

This came in response to Russia's foreign ministry spokesperson who said they have documents showing Ukraine ordered the destruction of plague, cholera, anthrax and other pathogen samples in an attempt to erase evidence of the military program.

Kirby dismissed the report as Russian "disinformation." Also Wednesday, the State Department claimed Russia is inventing false pretexts in an attempt to justify its own horrific actions in Ukraine.

Reports of Bioweapon Labs in Ukraine

cont. from page 1

while spilling blood, to find biological and chemical weapons throughout the world. We have found your own products. We have found your biological material. As it turns out it was all happening in Ukraine," RT, Russia state-affiliated media reported.

Russia now demands the US to explain bio labs in Ukraine.

Russia accused the U.S. of violations of the 1972 Biological Weapons Convention and has covered it up.

This comes after State Department official Victoria Nuland admitted in her testimony on Tuesday that the US has biolabs in Ukraine.

On Tuesday, the official spokesman for the China Communist Government confronted the United States on its 336 biological labs in 30 countries around the world. According to China, there are 26 US biological labs in Ukraine alone.

Our notes: The GWP has a lot right, but is obviously unaware the Putin has already shelled and destroyed confirmed labs in Ukraine.

Here's Your 'Red Pill' Moment for the Russia-Ukraine War

By Wayne Allyn Root
Posted: Mar 06, 2022 12:01 AM

It's time for your red pill. Something smells rotten in Ukraine. The story is rotten, rancid, hinky; the story just doesn't add up.

President Joe Biden and the media desperately want you to believe Russia is the bad guy and Ukraine is a little angel. They want you to fall in love with underdog Ukraine. They want you to support America getting involved on behalf of Ukraine.

To get your support, they need the media to sell you a bill of goods. But it just doesn't add up. First, Biden is the one who funded Russia's invasion. Biden killed our pipelines, killed coal and banned drilling, which made us dependent on Russian oil -- which made Russia filthy rich and arrogant. Biden paid for this war.

Second, if Russian President Vladimir Putin is the "bad guy," if Russia is evil, why is Biden continuing to buy billions of dollars of oil from Russia every day? Does this make sense?

Unless it's pure "commie theatre."

Connect the dots. Biden is a feeble, feckless old puppet with dementia. George Soros pulls Biden's strings. Soros is on the side of Ukraine. Soros recently said the whole world must support Ukraine. It's been reported Soros funded Volodymyr Zelenskyy and then installed him as president of Ukraine -- one of the most corrupt nations on the earth.

Keep in mind, evil billionaire Soros is obsessed with hatred for America. He desperately wants to destroy our country. Soros has funded the invasion of our borders. He helps pay for illegal aliens (many of them criminals, MS-13 gang members and murderers) to enter America.

Soros also funded and elected all the horrible, communist district attorneys across America. Soros' DAs are hellbent on destroying America. They have turned our big cities into killing zones where murderers run free without even posting bail while law-abiding citizens are stripped of guns and persecuted for defending themselves.

Soros has paid for the destruction of America. Soros is one of the most evil enemies in our history. If Soros funded the leaders of Ukraine and put them in power, this has to be a trap. Ukraine must be a "bad guy."

Now we come to the mainstream fake news media.

Has the media ever told the truth in the seven years since former President Donald Trump came down that escalator? It's been nonstop lies, fraud and propaganda. The media tells you any lie that advances the cause of Democrats, Soros and the destruction of America.

Now after seven years of lies and propaganda, suddenly you trust the media? You believe this one time they're telling the truth? This one time they have America's best interests at heart? Even though (pure coincidence) Soros is on the same side as the media. They're all one big happy family on the side of Ukraine.

I'll tell what I think.

No. 1: I think this war is a WMD: a weapon of mass distraction to get your mind off the disasters Biden has created at home, including open borders, massive inflation, vaccine mandates crippling the economy, the worst crime wave in history, the worst retreat in U.S. military history from Afghanistan and $6-per-gallon gas.

No. 2: This is pure "wag-the-dog" theatre to save Biden from the worst polls in modern history. Instead of hating Biden, they want you to hate Putin.

No. 3: This is all part of Soros and Klaus Schwab's "Great Reset." They want to make us all obedient serfs and slaves. They need World War III as a distraction while they destroy America and capitalism and take your freedoms away.

Here's my conclusion. I'm not "for" Russia. I'll never be a fan of Putin. He's out for only himself and a new dominant Russian empire. I'm not telling you to take Russia's side. They are "bad guys."

But I know if Soros is behind Ukraine, then Ukraine is also a "bad guy." If Soros wants us involved, I know this war is not in America's best interest. I know the media is feeding us a load of lies and propaganda -- under Soros' direction.

Like Trump, I have only one dog in this hunt. I'm ONLY for "America First." This war is nonsense. It doesn't involve us. We should not be sending billions of dollars in aid or sending billions in military weapons to Ukraine. I don't want this to turn into WWIII. I don't want my kids or your kids dying over Ukraine. We need to stay a million miles away from this conflict.

This isn't war, it's commie theatre. It's a WMD: weapon of mass distraction. Don't believe a thing you read or see coming from the fake news media.

Take your red pill and just say "NO" to this wag-the-dog moment.

Genderbread Person *cont. from page 15*

either male or female.

The video explains that children have any number of options, including genderqueer, non-binary, bigender, genderfluid, agenda, genderneutral, pandgender, or third gender. In short: "Only you can decide which word fits you best." You can identify how you feel, and when you feel differently, you can identify differently. In the meantime, it is the duty of society and those around you to play along with your feelings and treat you the way you identify, including (but not limited to) granting you access to the bathroom, locker room, and sports teams of your choice, as well as referring to you by your chosen pronouns.

This, of course, all leads straight into the transgender medical industry, with kids being turned into lifelong medical patients with puberty blockers, breast binders, and sex-change surgeries which often include "top surgery" — double mastectomies — or "bottom surgery" — castration and the attempt to create a crude imitation of the genitals of the desired sex. Once children or teens embark on this path, the damage is usually irreversible, and the effects — even if they attempt to "de-transition" later on — are permanent. The Genderbread Person may seem innocent, but the concepts being taught are very, very dangerous.

It gets more confusing. The video tells kids that "being heterosexual means someone is attracted to someone of the opposite gender on the traditional gender binary. By their definition, a man being attracted to a man who identifies as a woman would be heterosexual rather than homosexual."

Mary Ellen Siegler of the Massachusetts Family Institute told the New Boston Post that this form of indoctrination is unacceptable:

The Hadley school district is acting unethically by using videos like this to teach unscientific and harmful transgender identity lessons. These lessons not only seek to reform reality by challenging the basics of the biological binary, but they trample parental rights and authority by undermining what parents teach their children about sex and gender. Instead of indoctrinating students with dangerous ideas that set them up for mental, emotional, and physical harm and that disrespect the sacred parent / child relationship, Hadley school officials need to focus on teaching reading, writing, and math.

Not surprisingly, Hadley Public Schools superintendent Anne Mackenzie could not be reached by the New Boston Post for comment. In other jurisdictions, the Genderbread Person has been pulled from schools under protest from parents. Mothers and fathers with children in the Hadley Public Schools should follow suit.

Jonathon Van Maren is a public speaker, writer, and pro-life activist. His commentary has been translated into more than eight languages and published widely online as well as print newspapers such as the Jewish Independent, the National Post, the Hamilton Spectator and others. He has received an award for combating anti-Semitism in print from the Jewish organization B'nai Brith. His commentary has been featured on CTV Primetime, Global News, EWTN, and the CBC as well as dozens of radio stations and news outlets in Canada and the United States.

He speaks on a wide variety of cultural topics across North America at universities, high schools, churches, and other functions. Some of these topics include abortion, pornography, the Sexual Revolution, and euthanasia. Jonathon holds a Bachelor of Arts Degree in history from Simon Fraser University, and is the communications director for the Canadian Centre for Bio-Ethical Reform.

Jonathon's first book, The Culture War, was released in 2016.

Power Not Poverty

The past was green and fuzzy - the future is black and ominous."
- Richard Sebrof

By Viv Forbes

The green fairy-tale is over.

Even the green cheer squad in the bureaucracy and the media can sense the change. The sudden end was signalled by rolling columns of Russian tanks, quickly followed by surging prices for oil, gas, coal, wheat and barley.

For decades, one-worlders and greedy industrialists have sung the green songs – lauding wind/solar energy, worshipping hydrogen, and condemning coal, oil, gas and nuclear. Their doomsday chorus was taken up by tweeting teenagers and trendy adults in the green leafy suburbs – most of them supported in soft-chair jobs in media, bureaucracy and big woke corporations.

John Kerry (a rich climate-obsessed American aristocrat) worries that the Ukraine war "could have a profound negative impact on the climate". He is more concerned about beneficial emissions of life-supporting CO2 than about lethal bullets, missiles, and starvation.

Russia, China and India have focussed on developing and using their best energy resources, but Australia (following the Pied Pipers of Europe) has a bi-partisan policy to keep spreading the climate virus and subsidising more expensive green toys imported from China.

But, at long last, sanity is surfacing - Nigel Farage (the UK Brexiteer) has rung the full-time bell on climate alarmism with his new slogan against net zero madness –

"Vote Power not Poverty".

Just one late snow storm in Berlin, a food riot in Cairo or a blackout in New York will start the green rout.

The world is becoming a cold, hungry and dangerous place. Food is not produced in green forests, electricity is not generated in big batteries, green hydrogen is a net consumer of energy, and we will not fight the next war with battery-powered tanks, wind-powered frigates or an air force burning bio-fuels.

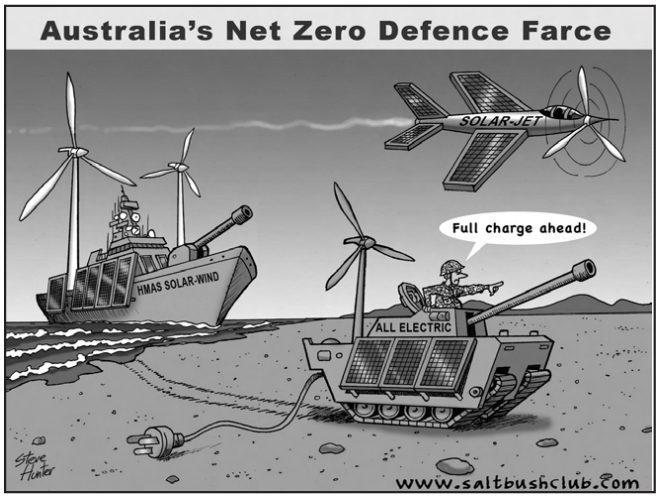
Just two years ago, Biden promised: "we are going to get rid of fossil fuels."

It's time to drag green dreamers and climate alarmists into the real world where food, fuels, metals, electricity and defensive weapons are produced. This must start by cleaning the green horse manure from the "Net Zero" stables.

Putin's tanks and missiles have started this process. Europeans now face the truth that coal, oil, nuclear and gas provide most of the power for their homes, factories, industry, transportation and agriculture. Without them, big cities will die.

We need more Hydrocarbon Power, more Nuclear Power, and less Un-reliables.

The world has changed. We can no longer afford "Net Negative Energy" or "Building Back Worse".



Trump "Reckoning"

cont. from page 1

Putin's resolve to cleanse the corrupt nation of bioweapon labs and child trafficking rings that appeared across the Ukrainian countryside at once after it declared independence from the USSR on 24 August 1991. Within months of the dissolution of the USSR, Western money squirted into Ukraine like water from a high-pressure hose. Millions of dollars from the U.S., Germany, and Israel poured into the private coffer of then-president of Ukraine Leonid Kravchuk who happily accepted American cash in exchange for allowing foreign powers to build bioweapon labs on foreign soil.

On Saturday evening, shortly after Trump concluded a "Save America" rally in Florence, he told his inner circle that the United States would soon experience a "very big reckoning" similar to what is occurring in Ukraine.

"Trump said it was almost time for the reckoning, a time the nation will be made aware of what's really going on and the actions he has taken to once and for all wage war against the Deep State cabal, both in the U.S. and abroad. While it may seem hard to believe, he's been working alongside Putin and Xi Jinping to rid the world of not only the bioweapon labs but the infestation of child pedo rings that have literally swamped the world. China says that the U.S. has set up biolabs in Taiwan, too, and that's one reason they've shown interest in retaking it," our source said.

President Trump, he added, told his circle he has irrefutable proof Vladimir Putin had indeed blown to smithereens 11 Fauci-funded bioweapon labs in central Ukraine.

"Trust me, we'll soon have an unbelievable reckoning here the likes of which no one has ever seen. It will be unbelievable, and the haters and loosers in the Lamestream Media will deny it, but the truth will be made public," Trump reportedly said. "Don't believe Fake News. I've never gone anywhere. I'm not coming back. I've been here all along."

"Soon, very soon, the country will know the truth about what's going in Russia and Ukraine, it will be tremendous, and the truth about 9/11 and so much more. Those tremendous frauds are nasty hells of catastrophe," Trump continued.

Amazing things will soon replace the despair and despondency so many Americans have faced, our source said.

Austria suspends mandatory Covid vaccination law

EU's first such rule dropped just a month after it took effect, as minister says it can no longer be justified

Austria has cancelled it's mandatory vaccine program just a few days before it was about to break international law by forcing it on population.

This is a great win for the White Hats.

Austrian government now needs to face the charges they must surely have coming to them?!?

Austria is suspending a law making Covid-19 vaccinations mandatory for all adults, just a month after the legislation took effect in an EU first.

The country of 9 million people was among few in the world to make coronavirus jabs compulsory for all adults. The law took effect in February and called for fines of up to €3,600 (£3,000) from mid-March for those who did not comply.

But the minister Karoline Edtstadler said the law's "encroachment of fundamental rights" could no longer be justified by the danger posed.

"After consultations with the health minister, we have decided that we will of course follow what the [expert] commission has said," Edtstadler said after a cabinet meeting. "We see no need to actually implement this compulsory vaccination due to the [Omicron] variant that we are predominantly experiencing here."

The highly contagious variant is widely believed to be less severe than previous forms of the virus, and so far Austrian hospitals have been able to cope with a surge in cases.

Calls to review the law have become increasingly loud, especially as Austria has dropped almost all coronavirus restrictions in recent weeks.

As of Tuesday, Austria had recorded almost 3m coronavirus cases and more than 15,000 deaths since the beginning of the pandemic in 2020.

Last year's mask and jab tyrants now demand 'respect'?

Commentary by Joe Schaeffer, 247 Real News

The "screw your freedom" contingent is now demanding respect for the blue-blanketed Linuses among us who continue to insist upon masking up as the coronavirus social curb regime slowly fades to black.

Whereas individuals should have the right to indulge their personal insecurities so long as it does not affect others, two years of brutal social tyranny in the name of "public health" have made it clear that this is not how it works. Government and coercive private business muscle allowed people who fully acceded to having their lives be ruled by illogical fear to impose their compulsions on the rest of us.

And so it is more than merely annoying that the same folks who openly mocked the rights of those who wanted to make an informed decision not to wrap a swath of plasticized fibers around their face are today assuming the role of delicate wounded birds, begging for understanding as they continue to perform their bizarre and socially hostile mask theater while clinging to their steadfast belief that they are our moral betters.

The Seattle Times wrote in a March 7 editorial:

As Fred Hutchinson Cancer Research Center clinical research professor of vaccines and infectious diseases Dr. Joshua Schiffer said, the region is entering a "natural experiment" about whether ending the mask mandate will affect community spread. Self-determination just became a larger factor in the experiment.

Schiffer said he'll continue wearing his mask, which is a well-informed decision that deserves respect. The end of the state mandate gives every resident and visitor the freedom to make a similar assessment of personal risk and act accordingly in public spaces. That situation should be accepted without confrontation. The workplaces and public spaces that continue to require masks and vaccinations as conditions of entry should have their policies respected for the same reasons.

This would be the same Seattle Times that wrote a charming Dec. 29, 2001 editorial titled "Employers must mandate vaccines":

So, what can be done? It's past time to admit that no amount of information, no recognition of the damage the virus can cause, will convince those who are able to be vaccinated but who have so far declined to do the right thing. This leaves vaccine mandates by employers as one of the few effective tools remaining to increase the vaccination rate.

When the choice is between hitting the road or taking the shot, a lot of people become more amenable to protecting public health.

My how the tone has changed in a little over a year. The San Francisco Chronicle on March 7 interviewed Dr. Bob Wachter, chair of the University of California San Francisco's Department of Medicine. Wachter is another one of those countless credentialed expertists who have run roughshod over this nation for the past 24-odd months. His day in the sun may be waning, yet he still sees himself as a personal fountain of wisdom from which we peasants must drink deeply. The topic? "Should you still wear a mask":

Some of the nicest feedback I get from my Twitter feeds is that many people have told me that they trust my decision-making process, and so make their decisions based on

Continue reading on page 19

COVID'S Lesson

cont. from page 8

• The Trusted News Initiative, despite its name counters media releases that question the official COVID government narrative.

• James Smith, the former CEO of Thomson Reuters and current Chairman of the Thomson Reuters Foundation, also sits on Pfizer's Board of Directors, has partnered with the Trusted News Initiative and provides Factchecking services for Facebook and Twitter.

• Google has a reputation for favoring left-leaning media. During COVID the search giant makes it all but impossible to find information exposing the CDC and FDA falsehoods.

• Fact-checkers and narrative followers label any information contradicting the FDA or CDC as rightwing, or disinformation.

Pfizer vaccine data made public

Released trial data showed the vaccine was never "safe or effective."

• On page 23 of the FDA's Summary explaining why they gave full authorization to the Pfizer Comirnaty, it reveals that 24% more people (21 versus 17) died from all causes in the vaccine group than in the placebo group. Pfizer stated the deaths were "unrelated to the vaccine" but provided no evidence. We will never know why the people died because in a few months, Pfizer abruptly terminated what was to have been a 2 year study by giving the vaccine to the placebo group.

• It took a court order forcing the FDA to release documents showing that within 90 days of the vaccine rollout, 42,086 adverse events (page 7) were reported of which 75% occurred in women. 1223 individuals had already died from the vaccine.

• A Swedish laboratory study shows that within hours the mRNA vaccine can enter the cell nucleus of your liver and convert to DNA. The CDC claims this can never happen. More study is needed.

• Pathologist's report of 15 patients who died following the vaccine shows 14 died from the mRNA jab.

• A European study of 68 countries and 2947 US counties shows higher vaccination rates do not reduce the incidence of COVID cases.

Whistleblower

• In January 2021 Brooke Jackson sued Pfizer and two companies the pharmaceutical firm contracted with to work on the trials, Ventavia Research Group and ICON PLC. Jackson caught the lab falsifying data, unblinding patients, and a host of violations in the Pfizer vaccine trials she reported to the British Medical Journal.

• Rather than being recognized for her discoveries, Jackson was terminated within days of notifying the FDA of the falsifications.

A sea of misleading information

• Despite telling Congress the COVID virus did not come from a laboratory, emails show that Dr. Fauci had lied. On Feb 1, 2020 Fauci already knew the virus was likely from a lab.

• Knowing there were serious questions about the vaccine's safety and effectiveness, the FDA still initiated a massive outreach campaign that paid major media outlets to promote the vaccine. Thousands of articles and videos flooded the internet claiming the benefits of the vaccines even though they were failing to stop the spread and were suspected of having serious side effects.

• The anti-hydroxychloroquine studies touted by the administration either used conclusions that misrepresented the study or were altogether fraudulent. One study head admitted to giving a potentially lethal dose of 2400 mg to patients.

• By May 2020, the Imperial College data predicting 2.2 million American deaths was exposed as statistically unreliable and a "buggy mess."

• Despite Pfizer's claims to the opposite, laboratory studies in Sweden prove the vaccine does enter your liver and convert your body's DNA.

The Lesson

The United States Government has proven it cannot be trusted. It is the enemy of the American people.

From the beginning of the pandemic the government has withheld information, misled Congress, and lied to the public. By colluding with the media and biased fact-checkers they have extended a fabricated narrative that spreads fear and compliance.

Why the drive to vaccinate everyone with a therapy that was a failure before the initial trials ended? The goal was never to return to normal but to create a nation of people so fearful they accepted the abnormal.

That 'abnormal' is a global vision the powerful in Washington hold of a managed nirvana where the future is controlled. Where people are malleable and go about their day ignoring government complexities. Where necessities are provided by Washington so you will own nothing and be happier.

This is Communism with granite counter tops and stainless-steel appliances.

It has worked well. Physicians are afraid to tell patients the truth of vaccines for fear of losing their licenses. Parents rejecting radical school boards face being labeled terrorists and investigated by the Homeland Security. 25% of parents have already subjected their children to a potentially toxic jab for a disease that is nearly 100% harmless in that age group.

The hard lesson is the United States has waged war against all Americans and fear and compliance are its weapons.

In January 2020, the American way of life we took for granted ended. We are no longer a government of, by, and for the people, but one that is the enemy of the people.

But it needn't stay that way.

Each of us is a megaphone to shout the truth. Pick a topic and become expert at it. Whether it is vaccines, homeschooling, COVID deaths, or property rights. Partner with others to learn and share what you know.

• Boldly speak up.

• Boycott establishments that require Covid Passes.

• Support small businesses.

• Never comply.

• Never fear being labeled a racist, a right-winger, or conspiracy theorist.

Transparency and truth are the two qualities elites cannot survive. That's why all stops will be pulled to ridicule and silence you.

Telling the truth will be painful. That is a reminder of how far we have fallen as a nation; but of how tough we are willing to stand to win our country back.

'Abomination': No 'independent press' and 'no oversight' of ongoing gene editing

By WorldTribune Staff, March 14, 2022

Science experiments are increasingly confirming that the mRNA Covid vaccines "have far-reaching and disturbing permanent genetic effects," a columnist wrote.

The many Big Media fact-checkers who claim that mRNA injections cannot change human DNA "are wrong," Igor Chudov wrote for The Covid World on March 13, adding that it is "no longer a conspiracy theory" that Moderna "was secretly working behind the scenes to modify human genes."

Chudov previously reported that the mRNA Covid vaccines "unexpectedly reverse transcribing into human DNA and creating strange DNA genetic codes in human cells, including the code of a p130 tumor gene, as well as a permanent DNA code to produce spike protein."

This counters the so-called fact-checkers who insist the "Covid vaccines make harmless spike protein that goes away in 2-3 days."

"Since then, I came across new information about Moderna going full speed with commercializing mRNA technology that alters and purposely edits human DNA," Chudov wrote.

According to a Nov. 2, 2021 report in Fierce Biotech: "We finally know who Moderna has been courting behind the scenes to make the big jump into gene editing. The famed biotech has signed a research partnership with CRISPR gene editing company Metagenomi."

Chudov noted that the Fierce Biotech article "inadvertently confirmed" some of the allegations he had made in previous articles.

Specifically:

• Moderna has been working actively on modifying human DNA in the past — DNA modification was work in progress, not a "known impossibility."

• Therefore Moderna knew that mRNA technology is capable of altering human DNA.

• Moderna knew full well that its mRNA nanoparticles target the human liver.

What is Moderna seeking in its deal with Metagenomi?

"It appears to be two things," Chudov wrote:

• A "system that allows for precise integration of large DNA fragments into genomes". As we know, Moderna's mRNA Covid vax does create DNA segments, however they might not be properly integrated into our 23 chromosomes and thus could express themselves in an uncontrolled manner.

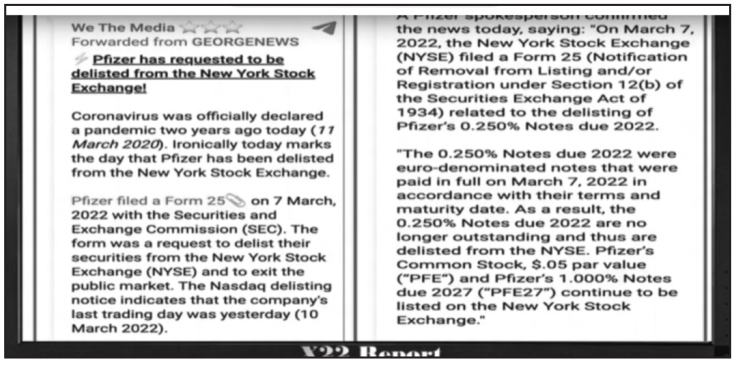
• Additionally, while Moderna excelled at creating nanoparticles that preferentially settle in liver, ovaries, testes, etc and create long living Spike-producing DNA, it does not have core competence in deciding what specific gene edits can be commercialized: "Metagenomi's discovery platform finds DNA from natural samples that can be sequenced to create new tools for gene editing."

So, what could go wrong?

"We have essentially no oversight of gene editing," Chudov wrote. "Moderna is conducting potentially very dangerous 'gene editing' experiments in total secrecy. The fact of 'total secrecy' surrounding experimentation on most basic human code is by itself an abomination and likely unethical, if not outright criminal."

Additionally, Chudov noted, "we have no independent press that reaches the general population that is capable of any kind of skepticism or questioning towards the 'sacred cows of Covid," that is, Pfizer and Moderna. These billion dollar corporations throw their ad purchases, lawyers, lobbyists etc and shamelessly hire regulators coming out of the revolving door or government."

A number of these genetic changes "have far reaching and not at all obvious consequences," Chudov wrote. "Genes do not operate like on/off switches. They epigenetically express themselves depending on conditions, just as computer code with IF or WHILE statements is also executed conditionally. Thus, changing one gene may have completely unintended consequences down the line, decades or generations later, same as with software codes."



CDC: Nearly 9,000 Covid vax injuries in kids ages 5 to 11; 1.5 million total adverse event reports

By WorldTribune Staff, March 7, 2022

Newly released data from the CDC's Vaccine Adverse Event Reporting System (VAERS) shows that 8,817 Covid vaccine injuries were reported for children ages 5 to 11.

Included in the 8,817 reports were 200 rated as serious. There were 4 reported deaths, 17 reports of myocarditis and pericarditis (heart inflammation), and 32 reports of blood clotting disorders.

Children survive Covid at close to a 100 percent rate.

The most recent death involved an 8-year-old boy from Mississippi who died 7 days after his second dose of the Pfizer vaccine. The boy was found blue and lifeless at home and was taken to the hospital with a full code in process. A pulse was detected several times, but the boy ultimately died in the ICU. It was reported to the doctor who filed the report that the boy died from multisystem inflammatory syndrome. He did not have Covid.

The VAERS data shows a total of 1,151,450 reports of adverse events following Covid vaccines were submitted between Dec. 14, 2020, and Feb. 25, 2022.

The data included a total of 24,827 reports of deaths and 200,331 reports of serious injuries.

Excluding "foreign reports" to VAERS, 774,373 adverse events, including 11,312 deaths and 74,257 serious injuries, were reported in the U.S. in the same time frame.

Of the 11,312 U.S. deaths reported as of Feb. 25, 18 percent occurred within 24 hours of vaccination, 22 percent occurred within 48 hours of vaccination and 60 percent occurred in people who experienced an onset of symptoms within 48 hours of being vaccinated.

Meanwhile, a study released on Feb. 28 showed the effectiveness of Pfizer's Covid vaccine in 5- to 11-year-olds was only 12 percent after a seven-week period of observation. Yet, the authors of the study still recommended the vaccine for that age group, stating it was protective against severe disease.

mask and jab tyrants

cont. from page 18

what I'm doing, which is a heavy responsibility, and one I take quite seriously.

Megalomaniac much? Wachter has a rather large platform on Twitter, with over 259,000 followers. It goes without saying that he loves vaccines, but he really, really loves Paxlovid, Pfizer's oral antiviral drug that is prescribed for patients who test positive for COVID. Carefully read the doctor's responses as to the appropriateness of masks today and it is obvious that he is still staking a claim to having a say over the everyday lives of the people of this nation. He can't enforce it via brute power anymore, so it is dressed up as sage medical guidance:

I am now comfortable eating indoors in restaurants. I also am fine getting together in small to mid-sized groups (up to 10 or so) of people who I'm pretty confident are vaccinated. (For example, I've resumed, maskless, my eight-person poker game.) I haven't worn a mask outdoors since early in the pandemic. But in larger indoor groups or in places where it seems unnecessary to accept any risk of catching COVID, I'll still wear a mask. So I wear one when I'm shopping, and would wear one if I went to a movie or indoor sporting event. I'm still required to wear one in the hospital. Flying: I keep it on for as much of the flight as I can, and try to remove it (briefly) to eat when others around me have their masks on.

Again, it is crucial to note what is going on here. He is the umpire:

> I am not critical of people who choose not to mask in large crowds or while shopping — particularly if they're low risk and if community transmission rates are low. But to me, it's reasonable to mask in those kinds of situations.

Gee, thanks doc. That sure is a relief to hear. The French-speaking Canadian province of Quebec orchestrated one of the most rigid coronavirus social curb regimens in North America. Today, the very same health departments that imposed curfews on residents only three months ago now call for respect for the masked. The Toronto Globe and Mail reports:

Masking, [Quebec interim public health director Dr. Luc Boileau] said, would become a "personal choice in the context of a progression to a normal life," but he added that "if there are people who feel more comfortable wearing a mask, of course they will be able to."

Let us reiterate: This is the same health department that refused to allow supposedly free citizens to leave their homes at night just weeks ago. It's important to see the passive tyranny subtly at work with this new soft approach. New York City has finally ended its horrific mask mandate on school children but teachers are being allowed to bully their young students into continuing to wear them anyway based on this same corrosive mindset embodied by the self-righteous examples above. The New York Post reported March 7:

Teachers at a top Manhattan high school pressured students to stay masked on Monday — all with the blessing of their principal, The Post has learned.

Plastic is NOT a Threat

cont. from page 1

Plastic bags, cups, and plates save the need for more paper. It saves the tress the greens are so concerned about. Plastic tables and chairs and lamps also save the demand for wood. Plastic bumpers on cars elimiinate the need for chrome, a natural mineral the greens worried about a couple of decades ago – plastic provided the saving solution. And the use of plastic in cars makes them lighter and therefore more fuel efficient. Plastic makes heart transplants possible. Plastic is used in a wide variety of medical devises, without which people would either die or be denied happy, useful lives. There is no natural wood, paper, or glass substitute.

It's interesting to note that the decade-old American obsession with bottled water resulted from environmentalist scares over possible chemicals in municipal tap water. Green radicals like the National Resources Defense Council (NRDC) spewed horror stories of tap water full of rocket fuel, arsenic, germs, feces, lead, and pesticides. Plastic bottles provided the solution. Now the pendulum has swung and we're all supposed to forget the earlier scaremongering over tap water and obey the new scare over water bottles. Crisis to crisis – whatever keeps up the green fundraising and power-building. It's also interesting to note that one of the biggest promoters of the return to tap water is the National Conference of Mayors. Many cities are now taxing each bottle used. A classic move – right out of the government handbook. Vilify it and then tax it.

So the mantra goes, plastic bottles and products are filling the landfills. Says one ad (by a water filter company with an ulterior motive to compete with plastic water bottles), America uses enough plastic water bottles to ring the earth several times in a year. Plastic bottles don't degrade, they say, so they will be in the ground forever. The collectively acceptable answer, of course, is that we simply must ban them and any other use of plastic, if possible.

One corporation using the anti-plastic propaganda is the Whole Foods super market chain which forces its suppliers to provide "sustainable" and recyclable packaging for their products or they will be banned from the store's shelves. The chain also does not use plastic carrier bags. Instead, it uses either paper bags or encourages customers to bring in their own reusable cloth bags. Whole Foods is a large enough force in the grocery market that such policies force other chains to follow suit. That, of course, is its political strategy.

Whole Foods CEO, John Mackey, is a full-fledged promoter of Sustainable Development as a political policy. He talks of corporations "doing good," through a policy of "Conscious Capitalism." I love the use of those words, "responsible;" "good," "conscious." Says who? Rather than a businessman, Mackey is ultimately promoting his own political agenda on the buying public. That isn't free enterprise; it's a form of activism designed to covertly enforce behavior modification techniques on the buying public.

In addition, Mackey's drive to "do good" has a lot of unintended consequences. First, he has helped to perpetrate lies and prejudices to encourage lawmakers to ban valuable products. That causes job loss in that industry. Second, he is taking away the right of choice from those who don't accept his position. Third, all so-called sustainable policies lead to one specific conclusion – higher prices for consumers. Fourth, his actions may well lead to endangering the health of many consumers. For example, removing plastic bottles for shampoos and conditioners and replacing them with glass bottles will be a hazard in the bathroom when they inevitably fall on the floor.

Finally there is a growing hypocrisy from the do-good faction. Some governments, such as in Fairfax County, Virginia are now charging 5 cents tax for every plastic bag, with the intention of returning us to the paper bags that were banned in the name of environmental protection for trees. The difference now is that the government will get to fill its coffers from the unnecessary regulations it imposed.

Of course, when political power is at stake, consumers are simply pawns to be manipulated. In San Francisco, where the city government banned the use of plastic bags, one resident wrote, "I remember when it began to rain last year while I was carrying my groceries home in a paper bag. As I chased my cans down the street, I cursed our idiot mayor and whoever among his stooges had decided to ban rainproof plastic bags in San Francisco. Paper is certainly biodegradable, for the process started even as I was carrying the bag home." Where was her freedom of choice?

When one is driven by political correctness or globally-acceptable truth, one has a hard time looking past the "allowable" thought patterns to ask obvious questions. Are plastic bottles really a threat to landfills? Is there another way to dispose of plastic other than throwing it in landfills? Is there any other reason landfills are filling up, and is there a solution? There are answers to these questions, but they will surely make the greens choke on their tofu as they read them.

The fact is, according to a 2010 report by Angela Logomasini of the Competitive Enterprise Institute, plastic bottles are not filling up landfills. They represent less than one percent of landfill waste. She goes on to agree that they don't degrade, "but nothing does."

In addition, we have an artificial shortage of landfills because environmental regulations prevent new ones. We have no lack of land in America and could open numerous new land fills to meet growing needs. Angela Logomasini agrees that we have plenty of landfill space and adds, "one large landfill 44 miles by 44 miles could manage 1,000 years of our waste. Simple enough, but completely politically in-correct in today's attack on logic. It's much more acceptable to regulate and ban valuable products. That has become the American way.

Those old landfills, once full, could be used for other uses. By researching the subject I found a list of 10 former landfills around the nation that were converted to parks, golf courses, playgrounds, soccer fields, and shopping centers. One in Virginia Beach, VA, was converted into a full-blown city park called Mount Trashmore. We're supposed to envision landfills as a no man's land of devastation and waste forevermore (hence the need to block the creation of new ones). But, again, it's not true.

Finally, there are at least two possible scientific solutions to the disposal of plastic — first, heat. Plastic products are produced and shaped through the use of heat. It melts at a very low temperature. Instead of throwing massive amounts of money into propaganda to destroy the plastics industry, those concerned over the disposing of plastic could develop and purchase heat-generating machines (without smokestacks) and place them at every landfill. Then, melt the plastic into reusable liquid. Well, perhaps that's not as much fun as bullying us with anti-plastic police forces.

In 2020, scientists working at the University of Portsmouth developed and even better solution. According to their findings, Polyethylene Terephthalate (PET) is the most common thermoplastic, used to make single-use drink bottles, clothing, and carpets. Usually, PET takes hundreds of years to break down in the environment, the leading attack against plastic. However, scientists have re-engineered a plastic-eating enzyme called PETase into an enzyme cocktail. Incredibly, this new PETase process can shorten those hundreds of years of plastic breakdown into a matter of days. That will revolutionize plastic recycling and eliminate the environmental danger.

However, as many now understand, little in these attacks against industrial revolution products have anything to do with science or truth. The roots of the environmental movement's agenda lay in the determination to destroy free markets. The use of fear of ecological Armageddon creates political power and massive funding for them. So, actually solving the problem means losing the power and the money. That's why no headlines have promoted solutions beyond banning the products.

Instead, there is now a steady march by the stores, which have always provided the bags (whether paper or plastic) for free, to embrace government regulations that will ban the bags. Providing those bags for free to every customer is a considerable cost for the store. Now, however, with the government's new tax, in the name of environmental protection, they are succeeding in getting consumers to purchase their own "reusable" bags which the store now sells to you for a profit. It's a new profit center built on environmental guilt. "Conscious Capitalism," indeed. Partnerships between government and private corporations, for the sake of political power, is more accurately called fascism, and truth and liberty always lose in that game.

Tom DeWeese is one of the nation's leading advocates of individual liberty, free enterprise, private property rights, personal privacy, back-to-basics education and American sovereignty and independence.

A native of Ohio, he's been a candidate for the Ohio Legislature, served as editor of two newspapers, and has owned several businesses since the age of 23. In 1989 Tom led the only privately-funded election-observation team to the Panamanian elections. In 2006 Tom was invited to Cambridge University to debate the issue of the United Nations before the Cambridge Union, a 200 year old debating society. Today he serves as Founder and President of the American Policy Center and editor of The DeWeese Report.

For 40 years Tom DeWeese has been a businessman, grassroots activist, writer and publisher. As such, he has always advocated a firm belief in man's need to keep moving forward while protecting our Constitutionally-guaranteed rights.

mask and jab tyrants

cont. from page 19

Beacon High School principal Brady Smith apparently sought to undermine the mayor's ending of the school mask mandate by telling parents that teachers could ask their students to wear masks.

"While teachers cannot mandate a mask in their classroom, they may request that students wear one as many of us have vulnerable loved ones at home," Smith wrote in a letter obtained by The Post.

A student described how the squeeze play worked:

A freshman told The Post that he had giddily shed his mask — until he was pressured into keeping it on by an instructor.

"My English teacher said 'It's preferred in my class to keep wearing the mask' so I put it back on," he said. "You know what that means."

The wounded birds use their fragility as a weapon against others:

Another male senior who asked not to be identified said his teacher also discouraged taking off masks.

"One of my teachers asked us to keep wearing them last night," he said. "It was his message to all of us on Google Classroom. They use it to post assignments, class assignments. He said his family members had co-morbidity and some other teachers had new babies and they want us to keep wearing masks."

This is the acute danger that comes with ceding one speck of moral authority to the maniacs who only a short time ago were demanding that Americans be fired from their jobs and not allowed to buy bread at the supermarket unless they bent the knee to the mask-and-jab tyranny.

Yes, of course, the lunatics among us who will go on donning their masks for no scientifically justifiable reason should not be kicked around for doing so. But neither should they be granted the tiniest sliver of public moral standing.

We've seen where that road ends.

These people grievously harmed tens of millions of their fellow Americans to indulge their fears. Leaving them alone and respecting their delusions are two very different things.

Milo: My new purpose is to protect the unborn and help men struggling with same-sex attraction

By Evan Stambaugh

Independence, Ohio (LifeSiteNews) — The headline speaker at the Bringing America Back to Life Convention last Friday was Milo Yiannopoulos, an author and former Breitbart columnist who renounced his homosexual lifestyle, repented, and returned to the Catholic Church last year.

Through no fault of his own, Milo's first-ever appearance at the convention did not proceed according to plan. A weather-induced flight delay in New York put him behind schedule, and upon landing in Cleveland he rode in the back of a squad car to make it to the hotel ballroom as quickly as he could.

Speaking with no notes after leaving his luggage behind, Milo gave an impromptu account of his turning away from homosexuality and the challenges he's now facing.

The conservative provocateur specifically raised his struggles with anhedonia, defined as the inability to feel pleasure, and implied that it is much more difficult to deal with than celibacy.

"When I was unknowingly choosing to live that [homosexual] life, I was condemned to loneliness, addictions, and a variety of other things," Milo said in reference to the "endless pursuit of dopamine and pleasure" which colored that life.

"I have permanently fried the reward circuits in my brain … Once you fry those circuits, they don't come back without decades of recalibration," he added.

Milo also articulated his new twofold mission after returning to the Catholic faith: to establish a Florida-based clinic to help gay men leave the homosexual lifestyle, and to protect the lives of the unborn.

"I've never changed on the gay thing, but I guess I've stopped being a hypocrite," he said. "Without Christ, I am fairly sure that I would be dead."

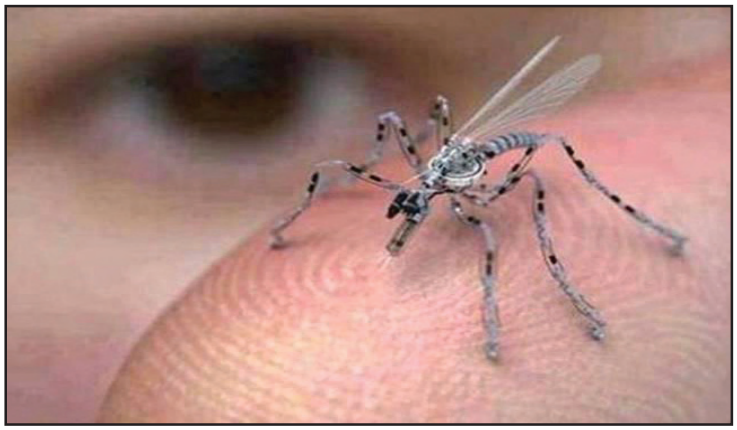
This Is Not A Mosquito!! Look closely...Incredible



Is this a mosquito? No. It's an insect spy drone for urban areas, already in production, funded by the US Government. It can be remotely controlled and is equipped with a camera and a microphone. It can land on you, and it may have the potential to take a

DNA sample or leave RFID tracking nanotechnology on your skin. It can fly through an open window, or it can attach to your clothing until you take it in your home.

Given their propensity to request macro-sized drones for surveillance, one is left with little doubt that police and military may look into these gadgets next.

And now you know why our government has requested the law be changed to allow drone surveillance in the United States...

(And to think we were worried about West Nile virus!)

New World Order

cont. from page 15

Zelenskyy

As has been pointed out by many parties, the candidacy and election of Ukrainian President Zelenskyy corresponds to that recent cliché, inaugurated in recent years, of a comic actor or entertainment personality being lent to politics. Do not believe that being without a suitable cursus honorum is an obstacle to the rising to the top of institutions; on the contrary: the more a person is apparently a stranger to the world of political parties, the more it is to be assumed that his success is determined by those who hold power. Zelenskyy's performances in drag are perfectly consistent with the LGBTQ ideology that is considered by its European sponsors as an indispensable requirement of the "reform" agenda that every country ought to embrace, along with gender equality, abortion and the green economy. No wonder Zelenskyy, a member of the WEF (here), was able to benefit from the support of Schwab and his allies to come to power and ensure that the Great Reset would also be carried out in Ukraine.

The 57-part television series that Zelenskyy produced and starred in, demonstrates that the media planned his candidacy for President of Ukraine and his election campaign. In the fiction show The Servant of the People he played the part of a high school teacher who unexpectedly became President of the Republic and fought against the corruption of politics. It is no coincidence that the series, which was absolutely mediocre, still won the WorldFest Remi Award (USA, 2016), came among the top four finalists in the category of comedy films at the Seoul International Drama Awards (South Korea) and was awarded the Intermedia Globe Silver award in the entertainment TV series category at the World Media Film Festival in Hamburg.

The media stir obtained by Zelenskyy with the television series brought him over 10 million followers on Instagram and created the premise for the establishment of the homonymous Servant of the People political party, of which Ivan Bakanov, General Manager and shareholder (along with Zelenskyy himself and the oligarch Kolomoisky) of Kvartal 95 Studio, and the owner of the TV 1+1 television network, is also a member. Zelenskyy's image is an artificial product, a media fiction, an operation of manipulation of consensus that has managed to create the political character in the Ukrainian collective imagination that in reality, and not in fiction, has conquered power.

"Just one month before the 2019 elections that saw him win, Zelenskyy sold the company [Kvartal 95 Studio] to a friend, still finding a way to get the proceeds of the business he had officially renounced to his family. That friend was Serhiy Shefir, who was later appointed Councilor to the Presidency. […] The sale of the shares took place for the benefit of Maltex Multicapital Corp., a company owned by Shefir and registered in the British Virgin Islands" (here).

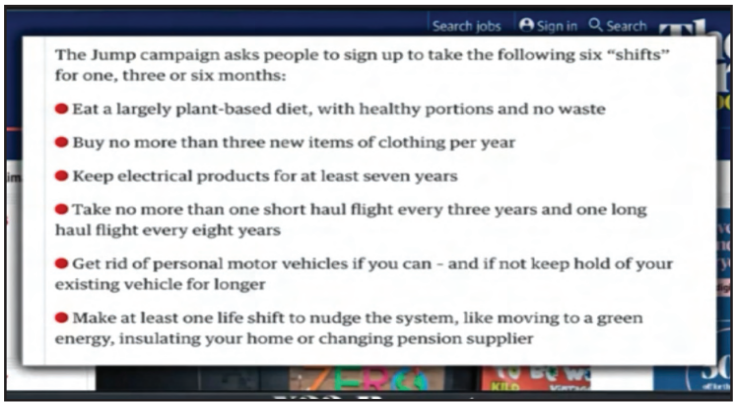
The current Ukrainian President promoted his election campaign with a commercial that was disturbing, to say the least (here), in which, holding two machine guns, he fired on members of Parliament, pointed out as corrupt or subservient to Russia.

The fight against corruption trumpeted by the Ukrainian President in the role of "servant of the people" does not correspond, however, to the picture that emerges of him from the so-called Pandora papers, in which 40 million dollars appear to have been paid to him on the eve of the elections by the Jewish billionaire Kolomoisky[1] through offshore accounts (here, here and here).[2] In his homeland, many accuse him of having taken power away from the pro-Russian oligarchs not to give it to the Ukrainian people, but rather to strengthen his own interest group and at the same time remove his political adversaries:

He liquidated the ministers of the old guard, first of all the powerful Minister of the Interior, [Arsen] Avakov. He rudely retired the president of the Constitutional Court who was acting as a check on his laws. He closed seven opposition TV channels. He arrested and accused of treason Viktor Medvedcuk, a pro-Russian sympathizer but above all the leader of the Platform of Opposition – For Life party, the second party of the Ukrainian Parliament after his Servant of the People party. He is also placing on trial for treason former President Poroshenko, who was suspicious of everyone except for those who got along with the Russians or their friends. The mayor of Kiev, the popular former world boxing champion Vitaly Klitchko, has already been subjected to several searches and seizures. In short, Zelenskyy seems to want to make a clean sweep of anyone who is not aligned with his politics (here).

On April 21, 2019, Zelenskyy was elected President of Ukraine with 73.22% of the votes, and on May 20 he was sworn in. On May 22, 2019 he appointed Ivan Bakanov, Director General of Kvartal 95, as First Deputy Head of the Security Services of Ukraine and Head of the Main Directorate for the Fight against Corruption and Organized Crime of the Central Directorate of the Security Service of Ukraine. Along with Bakanov, it is worth mentioning Mykhailo Fedorov, Vice President and Minister of Digital Transformation, a member of the World Economic Forum (here). Zelenskyy himself has admitted to having as his inspiration the Prime Minister of Canada Justin Trudeau.

The future according to the New World Elites



Who buys into this nonsense?

'They're using Ukrainians as human shields' to 'build back better': Remnant's Michael Matt

There 'is so much more going on in this, that we're not being allowed to hear.'

By Kennedy Hall

(LifeSiteNews) – Remnant newspaper chief Michael Matt said in a Saturday edition of his show, The Underground with Michael Matt, that globalists and oligarchs are using the conflict in Ukraine as an opportunity to further the agenda of the Great Reset.

"They're using Ukrainians as human shields," he said, in order to "build back better."

"They need dead Ukrainians, do you understand that?" he asked rhetorically. "They need the image of dead babies in the streets of Kiev for this to work."

Matt made it clear in the broadcast that he was not an "apologist for (Vladimir) Putin," but he stressed that there "is so much more going on in this that we're not being allowed to hear."

Matt said that the politicians and oligarchs supporting the Ukrainians "do not care about the Ukrainians."

The video flashed to a moment in 2014 when then-spokesperson for Hilary Clinton's State Department – Jen Psaki – was asked about U.S. officials who had been caught discussing a coup d'etat in Ukraine.

Matt intimated in the video that the last eight years of conflict in Ukraine, which have precipitated the war, were largely the fault of Western powers who stoked revolution and regime change in Ukraine.

He went on to make parallels between the advent of COVID in 2020 when everyone who dissented from the narrative "wanted to kill grandma," and he mentioned the George Floyd affair, which was used by globalists to push a "defund the police" movement.

"Do you know how much they cared about George Floyd at that time?" he asked the audience. "Just about as much as they cared about our grandmas – they didn't, they don't."

"It's all media emotional manipulation, they're good at it, and that's what they're doing."

With the threat that the U.S. may enter the war, he called out President Joe Biden for refusing to talk with Putin.

One Nation Under God

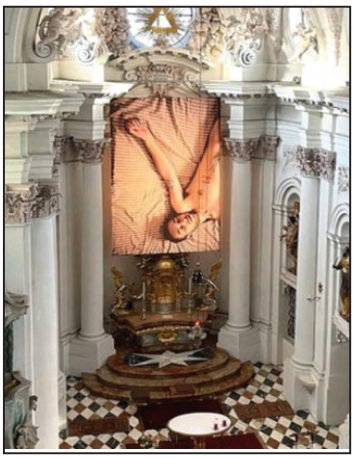
Austrian bishop hangs banner of nude trans activist over main altar for Lent

(LifeSiteNews) – The Catholic bishop of Innsbruck, Austria, inaugurated a "Lenten" decoration of the main altar of the historic University church of Saint John Nepomuk, a baroque jewel from the early 18th century. The "decoration" shows an enlarged partial inverted photograph of a naked young man with scars and tattoos lying on a bed and has been placed as an altarpiece above the tabernacle of the former main altar of the church. The piece of contemporary art by Carmen Brucic was specially chosen by Bishop Hermann Glettler, and bears the title: "Tired."

Bishop Glettler has campaigned for the blessing of same-sex couples in the past (more on that later).

In itself, the more-than-life-size picture (4.5 by 3 meters) is completely incongruous over an altar because it has no religious meaning. But the picture of this nude young man lying on his back in an exhausted attitude, barely missing the display of his genitalia, is doubly scandalous. Besides its obvious indecency in such a setting, it portrays a prominent figure of the "queer" scene in Tbilisi, thus openly glorifying a "gay" activist from Georgia whose image will remain over the tabernacle holding the Real Presence of Our Lord in the Eucharist until the end of Lent.

The said young man, David Apakidze, 23, is half Georgian, half Ukrainian – a somewhat obvious way of presenting the photo installation as a reflection on the current Russian invasion



of Ukraine. But he is better known as an activist of the Bassiani club where Georgian homosexuals, drag queens and other self-proclaimed promoters of sexual deviancy had found a "safe space" for techno music, rave parties, and "LGBTQ" performances. The club was founded in 2014 and hosted performances that can only be qualified as hellish. In May 2018, the club was raided by police and closed. Many later joined a public protest dubbed "rave-o-lution days" with crowds dancing non-stop in the streets to techno music. The club was reopened but closed again for many months due to COVID restrictions.

At this time, Apakidze became a member of the "queer Georgian art collective" dedicated to "destroying toxic social norms."

"Tbilisi-based queer art collective Fungus thrive amid hostility. By creating unapologetically bold art and a supportive community, the group of 20 artists are carving out a safe space for queer youth in a society seeking to marginalize them. 'Fungus thrives in damp and dark places,' the group's manifesto reads. 'It plays a vital role in the ecology of the biosphere. By decomposing any organic matter, it creates rich soil. A counterculture prospers similarly," explained The Calvert journal, an online magazine "exploring the contemporary culture and creativity of the New East: Eastern Europe and the Balkans.

"Fungus," "a very left-wing, liberal base" was formed to hold a queer art show alongside the Tbilisi Mercedes-Benz fashion week one year ago. The plan was stalled by COVID restrictions but the group went on to organize many events linked to the "Rave Revolution."

This is where Carmen Brucic, the Tyrolean photographer who was approached by Bishop Glettler to contribute to his "tired? lost? displaced?" art show that consists in the display of three "installations" in as many churches in Innsbruck this Lent. The bishop appears to have appreciated an exhibition she set up at the Tbilisi Photo Festival in Georgia in the summer of 2021: under the title "Private Stages," it portrayed five activists of the "Rave Revolution." Apakidze was one of them.

Brucic chose to shoot her pictures of the young man in all his "fragility," lying naked on a bed, adopting different poses. The photo chosen by Bishop Glettler focuses on Apakidze's inclined face, chest and outstretched arm in a way that apes an inverted Crucifixion, showing the activist's pierced nipple and multiple tattoos and scars on his inner arms due to self-harm.

Contemporary art always asks for discussion because what the "discourse" about installations are part and parcel of every opus. In this case, it was Bishop Glettler who got the ball rolling by proclaiming that "the photo of the young man in the picture is from characterized by suffering and aggression against oneself." The photo is "an expression of exhaustion and resistance," he said, adding that "it is an ambivalence that was interesting to us. The arm forms a kind of 'V' as for 'victory.' In this respect, it is a very strong fasting and Easter symbol!"

The bishop cannot have ignored Carmen Brucic's other work, dark and tortured, abounding in images of death, waste, and de-structured human figures. Nor can he have missed the short video showing the artist's work for the Tbilisi Festival, with its images of transexual men and the full series of the homo-erotic shots of Apakidze.

Apakidze's own Instagram account shows many equivocal pictures of trans men, tortured faces, homosexuals kissing, and altogether weird and disturbing young people who have no idea of their own dignity. It includes the photograph of a contemporary art exhibit labeled "Abortion Pills" set up – according to the "artist" – as "a corner of the icons of the Virgin Mary, which is an advertising campaign for abortion pills."

"Abortion is a sacral act in which a woman reclaims the right to reproduce," Apakidze further comments.

This man's picture is now hiding the baroque altarpiece of an Austrian church, with the dubious blessing of the local bishop who not only inaugurated the work together with Carmen Brucic last Tuesday, but who claims full responsibility for choosing and organizing what must be a blasphemous installation, given the context.

Hermann Glettler is not unknown to LifeSite readers. In January 2019, he announced that he would "host a set of seminars for divorced and 'remarried' couples, at the end of which the couples will be allowed to receive Holy Communion and a 'celebration of reconciliation and of blessing,'" reported Maike Hickson at the time. These "seminars" were based on Amoris Laetitia, stated the website of the Austrian bishops' conference.

"Even if a second Church marriage is not possible," explained Glettler, "we want to assure all couples that they have their place at the center of the Church."

"We rejoice that people, after experiences of failure in life, take courage again and dare to enter new relationships," the diocese added.

Two months later, Glettler allowed a "Jesus Clock" made from an upside down corpus with broken arms to be installed in the Spitalskirche in Innsbruck throughout Lent; he also allowed an artist to set up scaffolding featuring an inscription that read: "So long as God has a beard, I will be a feminist."

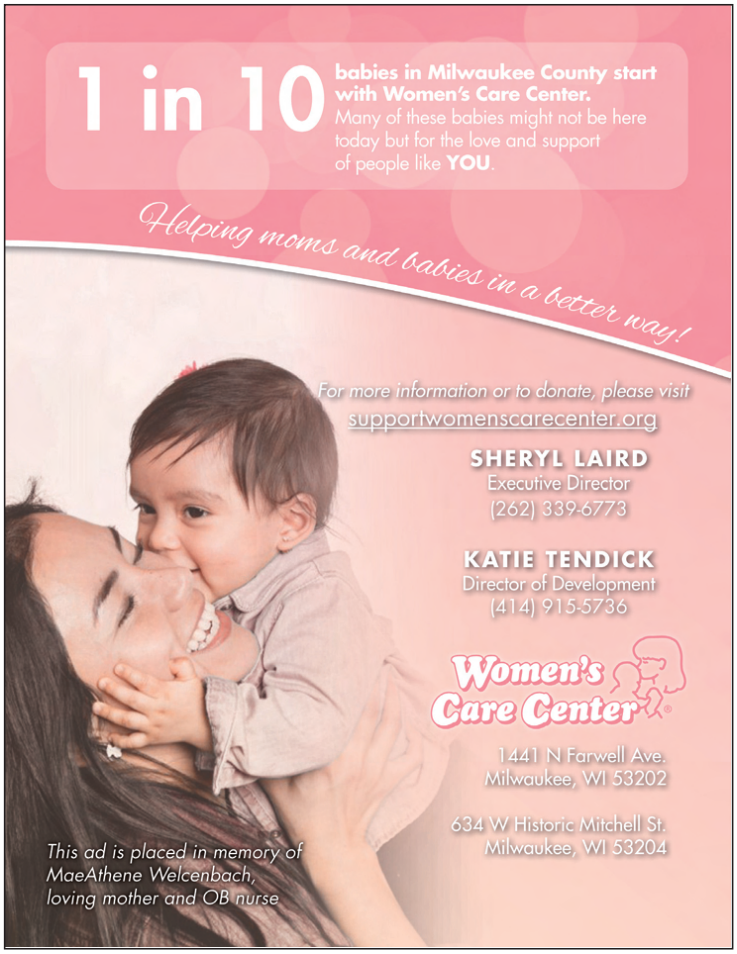
In 2020, he said that the Church's doctrine that women cannot be ordained as priests is an "inequality" that is "difficult to justify."

In March 2021, Bishop Glettler reacted negatively to the Congregation for the Doctrine of the Faith's rejection of blessings for same-sex couples, instead encouraging the Church to welcome them: "As a church, we would like to offer all people who are gay, lesbian, or insecure about their sexuality a welcome and a spiritual home in the church – and not only at the point when they are celibate," he told Kathpress in an interview. He called the CDF statement (that was approved by Pope Francis) a "disappointment for all who have hoped for a clearer sign of acceptance of homosexual couples."

He added that the statement was a sort of "insult" and a signal telling them: "The way in which you are living is not right." He suggested that family members of such pairs should bless them instead, putting an end to the discussion about the banning of Church blessings.

Hermann Glettler, a member of the supposedly mainstream traditional "community of the Emmanuel" was named as bishop of Innsbruck in 2017 by Pope Francis, having already made a name for himself as a promoter and personal producer of contemporary art. In 2017, he staged an exhibition of his private art collection in Graz, Austria. His personal website includes a film of a music performance at the Glettler Privat exhibition which featured a defaced image of a statue of the Sacred Heart, a pile-up of kitsch statues of Our Lady of Fatima, and another statue of the Virgin of Fatima next to a primitive fertility statuette of a black woman.

To LifeSite's knowledge, Bishop Glettler has not been sanctioned for any of this, nor has he been publicly disavowed by the Catholic hierarchy.



VOICE OF JERUSALEM

Biden's Betrayal has Just Begun

By Caroline Glick

Tuesday the Washington Examiner reported that Iranian Revolutionary Guard Corps, (IRGC) officers are actively plotting to murder former U.S. National Security Advisor John Bolton. According to the report, late last year, Bolton joined former Secretary of State Mike Pompeo as a former senior official who receives Secret Service protection due to "continuing, credible and specific" threats on their lives emanating from the IRGC.

The paper revealed that despite the fact that the U.S. Justice Department knows the identity of the IRGC officers leading efforts to murder Bolton, and has the evidence to indict them, the Justice Department is refusing to issue indictments "for fear that it could derail [the administration's] drive for a nuclear deal with Iran, currently nearing completion in negotiations in Vienna, Austria."

Under U.S. law, it is an act of war for a foreign power to attempt the assassination of U.S. citizens in the United States. So by rights, at a minimum, the Biden administration should be expected to pursue Bolton's would be assassins with the full force of law. But in a testament to the obsessive-compulsive nature of the administration's pursuit of a deal with Iran, not only are President Joe Biden and his administration not retaliating for this act of war. They are giving the Iranian regime a free pass to wage war against America, on its sovereign territory.

The Biden administration's decision to let Iran's efforts to murder U.S. citizens and former senior U.S. officials slide is in keeping with its policy of genuflection towards the mullahs. And of course, this genuflective policy is most graphically and dangerously expressed in the deal the administration has negotiated with Iran in Vienna. The deal, which relates to Iran's illicit nuclear weapons program and to U.S. economic sanctions on the regime is expected to be formally concluded within days.

Last week, former State Department official and Iran sanctions expert Gabriel Noronha posted details of the far-reaching concessions the Biden administration has already made to the Iranians in Vienna. Noronha wrote on his Twitter feed that he received the details of U.S. concessions from members of the U.S. delegation and members of a European delegation to the talks. Noronha's sources are former colleagues whom he refers to "career" officers rather than political appointees. As he put it, they "are so concerned with the concessions being made by [U.S. Delegation head] Rob Malley in Vienna that they've allowed me to publish some details of the coming deal in the hopes that Congress will act to stop the capitulation."

It should be noted that Noronha's colleagues' concerns are not theirs alone. Three members of the U.S. delegation, led by Malley's deputy Richard Nephew quit the talks a few weeks ago due to their conviction that Malley's capitulation to the Iranians endangers the United States.

Noronha's former colleagues who remain on the U.S. delegation and on one European delegation told him that acting with the full support of Biden and Blinken, Malley has already agreed to all of Iran's demands for the removal of sanctions against Iranian terror commanders and Iranian institutions and individuals involved in Iran's missile programs, its weapons of mass destructions programs and its terror operations. Malley, who is known for his radical positions favoring Iran and implacably hostile to Israel is not merely leading the negotiations in Vienna. Operating with the full support of Joe Biden and Secretary of State Anthony Blinken, Malley is responsible for all of the administration's Middle East policies.

Noronha's colleagues characterize the all-but-completed deal with Iran as a complete U.S. surrender to Iran's demands. Their claims were borne out this week by a statement from Russian Ambassador Mikhail Ulyanov. As Russian President Vladimir Putin deployed forces by the tens of thousands to Russia's borders with Ukraine in the lead up to last month's invasion, Malley appointed Ulyanov, who heads Russia's delegation in Vienna to serve as one of two mediators between the American and Iranian delegations. Ulyanov's services were necessary because the Iranians refuse to sit in a room with Americans.

According to Malley's sources, Ulyanov has "essentially run" the nuclear talks – at Malley's behest. And as Ulyanov said this week, "Iran got much more than it could expect. Much more."

Malley reportedly has agreed to remove the IRGC from the State Department's list of foreign terrorist organizations in addition to withdrawing sanctions on Iranian terror masters and missile and WMD proliferators. He has also capitulated on nuclear safeguards. As Noronha detailed, the deal that Malley has negotiated includes weaker and shorter-term restrictions on Iran's nuclear operations than Malley and his colleagues negotiated in the 2015 nuclear deal.

The moment the deal is concluded, and without Congressional oversight, Iran will automatically receive $90 billion in sanctions relief. Iran will receive at least $50-55 billion in subsequent years from oil and gas sales since the new deal ends all sanctions on Iran's energy sector.

The strategic implications of these cash injections are clear. As it did after it received a cash infusion of tens of billions of dollars with the implementation of the 2015 deal, so today, Iran will use its windfall to fund its proxies and its wars against Israel and the Sunni Arab states. In real terms, $90 billion in Ayatollah Ali Khamenei's pocket translates into thousands more drones and precision guided missiles in the hands of Hezbollah in Lebanon, Hamas in Gaza, the Houthis in Yemen, the Shiite militias in Iraq and the Assad regime in Syria. It means more terror cells in Europe, North and South America.

The larger strategic significance of the nuclear deal is that Iran will expand its regional hegemony through its IRGC forces and its terror proxies while operating under a UN Security Council and U.S. government sanctioned nuclear umbrella. Israel will find itself on the wrong side of the UN Security Council and – depending on who sits in the White House – on the wrong side of the U.S. government if and when it is compelled to militarily strike Iran's nuclear installations to prevent the theocracy sworn to its annihilation from acquiring the means to destroy it.

The Biden administration justifies its pro-Iranian and anti-Israel/Sunni Arab policy by claiming it is a means to disengage the U.S. from the Middle East at a time that Washington is keen to concentrate its resources and attention on Asia and the rising threat of China. While on its face, this justification seems reasonable, it stands on a rotten foundation.

During his term in office, then president Donald Trump sought to minimize U.S. presence in the Middle East in order to focus U.S. efforts and resources in Asia to contend with the rising threat from China. To achieve this goal, Trump empowered America's allies – Israel and the Sunni Arab states led by Saudi Arabia. He provided political, diplomatic, logistical and when necessary, military support to ensure the success of their efforts to combat Iranian aggression against them.

Trump's concept, which was successfully diminishing both the level of violence in the region and the U.S.'s direct involvement in the Middle East, was that since America's allies share the U.S.'s interests in the Middle East, the more able they are to defend their own interests, the less the U.S. will have to invest in protecting its interests in the region.

Trump created institutional frameworks for cooperation between U.S. allies both by forging the Abraham Accords which effectively ended the Arab conflict with Israel, and by integrating Israel into Central Command and so fostering operational military cooperation between Israel and the U.S.'s Arab allies under the aegis of the U.S. military.

Biden's policies are the polar opposite of Trump's policies both conceptually and substantively. Biden's policies represent a reinstatement and escalation of Barack Obama's policies for Iran and the wider Middle East. In contrast to Trump, Obama, Biden and their advisors believe that the U.S.'s Middle Eastern allies – Israel and the Sunni Arab Gulf states – maliciously worked for decades to entangle the United States in the wars of the Middle East. To disentangle America from the region and its pernicious "allies" the Obama-Biden doctrine posits the U.S. must realign itself away from its allies and weaken them, and towards Iran, which it must empower.

This brings us to Israel, and what its government must do in the face of the administration's betrayal. Since supporting Iran and undermining Israel are the founding principles of Biden's Middle East policies, they are not subject to change. Israel cannot influence them. It doesn't matter how many times Prime Minister Naftali Bennett and Foreign Minister Yair Lapid gush about Israel's "true friends," Biden and Blinken. They have chosen a path that is impermeable to reason and argument.

Rather than expend efforts to woo an implacably hostile administration – through futile mediation of other people's wars and committing Israel to a policy of "no surprises" in its handling of Iran's Biden-supported-nuclear program, Israel's leaders must prepare for what awaits us.

We are about to be scapegoated.

In 2014-2015, in their efforts to sell their original cataclysmic nuclear deal with Iran, Obama and his advisors ran a campaign to demonize Israel and its supporters in Congress specifically and in U.S. public life more generally. Now that Biden has agreed to an even more dangerous nuclear deal, Israel can expect for the demonization campaign that awaits it to dwarf its predecessor. In fact, as we see with the administration's efforts to scapegoat Israel directly, through its media partners and through the Ukrainian leadership for not being sufficiently anti-Russian, the campaign has already begun.

The Saudis and the Emirates Clearly already recognize the sucker's game that Biden and his team are playing. Wednesday the Wall Street Journal reported that Crown Prince Mohamed bin Salman of Saudi Arabia and Crown Prince Muhammed bin Zayed of the UAE both refused to accept phone calls from Biden this week. Israel's leaders should follow them in accepting reality and acting accordingly before the situation deteriorates still further.
