Heroes of the American Republic - *True the Vote's* Catherine Engelbrecht and fraud investigator Gregg Phillips

True the Vote Announces They Now Have Footage of the 2020 Green Bay Drop Boxes

Are Working with Law Enforcement in Wisconsin

By Jim Hoft, May 16, 2022

True the Vote's Catherine Engelbrecht and fraud investigator Gregg Phillips sat down with The Epoch Times this weekend for an update on the ballot trafficking investigations.

Catherine Engelbrecht announced that her organization now have video footage of the ballot boxes from Green Bay, Wisconsin.

Catherine and Gregg claim that Obama-affiliated NGOs spent billions to steal the 2020 elections.

Catherine also said True the Vote is working with at least two local law enforcement

Real threats to biodiversity and humanity

Healthy ecosystems and life on Earth suggest ending wind, solar, biofuel and organic programs

By Paul Driessen

References to climate change almost guarantee funding, even for research topics of little interest beyond academia and eco-activists. Polls reveal that most people worry most about energy and food prices, crime, living standards, Putin's war on Ukraine, and increasing efforts to control their lives.

A recent study by Rutgers University scientists sought to determine how much diversity is required among bee species to sustain wild plant populations. They concluded that ecosystems rely on many bee species to flourish – and "biodiversity is key to sustaining life on Earth," especially with many species "rapidly going extinct due to climate change and human development."

Biden Announces Food Shortages Then Makes it Happen

By Kat Stansell

On March 24, 2022, after the G7 meeting in Brussels, Biden announced that the food shortages around the world would be "real" – of course, because of the Ukraine war, which he so desperately wanted, and those dastardly Russians. Now, he is making it happen. In the last five months, TWENTY food and fertilizer plants and storage facilities across America have been destroyed by fire. The latest incident is a plane, crashing into a General Mills plant in Covington, GA, April 21, 2022. The day before, it was a nut and vegetable processing plant in Dafur, OR, where employees responded to a popping sound as the electrical system caught fire. The week before, a massive fire brought down East Conway Beef and Pork in Conway, NH – as well as a Taylor Farms plant in Salinas CA. A few weeks before that, a huge Walmart

Russia convenes UN Security Council; U.S. embassy removes links on 15 Ukraine biolabs

By WorldTribune Staff, March 11, 2022

Russia informed the UN Security Council on Friday of "the military biological activities of the U.S. on the territory of Ukraine."

In a Security Council session convened at Russia's request, Russia's permanent representative to the UN, Vasily Nebenzia, claimed the U.S. Department of Defense had funded the biolabs in Ukraine, Russia's TASS news agency reported.

"Some documents came into possession of the Russian Defense Ministry. They confirm that a network of at least 30 biological laboratories has been formed in Ukraine, which conducted extremely hazardous biological experiments aimed at amplifying the pathogenic characteristics of the plague, anthrax, tularemia, cholera and other deadly diseases with the help of synthetic biology," Nebenzia said.

"The work has been funded and directly supervised by the Defense Threat Reduction Agency (DTRA) at the Department of Defense, including on behalf of the National Center for Medical Intelligence at the Department of Defense," he added.

On Thursday, Olivia Dalton, spokesperson for the U.S. Mission to the United Nations, had said: "This is exactly the kind of false flag effort we have warned Russia might initiate to justify a biological or chemical weapons attack. We're not going to let Russia gaslight the world or use the U.N. Security Council as a venue for promoting their disinformation."

Ukrainian President Volodymyr Zelensky denied Russia's accusation that Ukraine is preparing to attack with chemical or biological weapons.

"That worries me very much because we have often been convinced that if you want to know Russia's plans, they are what Russia accuses

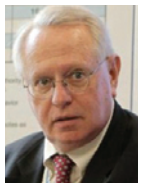
Climate Change is About Control Stupid, Not the Environment



By William L. Kovacs

The apocalyptic talk about climate change is nothing more than a diversion tactic by the government, the radical Left, and its mainstream press. The many laws, trillions in federal appropriations and tax credits, and the unworkable proposals to address climate change will not slow the rise of the oceans or heal the planet. Lobbying for more climate

Steve's Say . . .

Which Future Will The People Choose?

By Steve Welcenbach

Yesterday I experienced the world as it could and may become.

The appointment for my initial consultation/health evaluation at the **Brookfield Health and Wellness Clinic** got moved up from the original date of June 27th. This clinic describes itself as a functional and integrated health and wellness center utilizing cutting edge diagnostic technology in conjunction with naturopathic methodology to assist each individual participant in optimizing their bodily functions.

The whole process blew me away. For starters, the founder, Susan Rohr, an RN and certified ONDAMED practitioner, personally evaluates each new individual seeking to improve their health. Beside being super nice, easy to talk to, open and extremely knowledgeable, her faith in Jesus Christ her Savior and the Lord God Almighty precedes her as an aura. Susan's personal story of her near death experience, her road to recovery and how that led her to devote her life to sharing this knowledge pathway with others in the world needs to be recorded and widely disseminated. And all who have chronic, urgent or "unsolvable" health issues ought to get an appointment to see Susan asap.

Besides a detailed discussion of my past health practices, habits and issues, the evaluation involved a very comfortable lounge-type bed where I got gently cuffed to some sort of electronic system feeding into a computer. It read out a continuous squiggle of 5 lines which danced around sometimes smoothly and other times in drastic upward or down motions. Apparently this technology mimics the **Madbed** technology many medical gurus forecast becoming widely available soon.

Susan explained this phenomenon as best she could for someone completely ignorant of this cutting-edge technology. In short, she could disseminate from those squiggles everything that was happening in my body. Her evaluation rang true. In many instances she cited issues I knew of but didn't share with her. And several things I had no idea were at play in my body. She literally laid bare the soul of my entire body. While intriguing and quite awesome, the information included much I considered disconcerting. I wasn't nearly as healthy as I thought I was! But she exuded confidence she could address each issue she discovered no matter how disconcerting it seemed to me.

Susan also deployed some German technology which assisted her in determining which supplements were right for me, including the myriad of supplement bottles I brought that I already used. Needless to say, my multi vitamin didn't pass and was immediately discarded, but the other 5 bottles passed as OK. In fact, using this guru stick as I called it could tell her how much of each supplement I should be taking. It seemed like magic.

So after all that I got a bagful of new supplement goodies along with a written plan of how and when to take each. Susan's recommended follow up treatment course she promised to deliver to my inbox the following day (which it did.) And she finished off everything with a sincere hug of the warmest variety. What an awesome lady and an awesome system she's developed to help us all!

Now back to the rest of the world.

I heard a Mike Adams podcast speculating that China and Russia may be executing a plan to create a three front war to bring down the United State of America for good. He invoked the possibility that Chinese troops could enter and attack across both the southern and northern borders, as Mexico and Canada both cozied up to the CCP and several intelligence sources say already house tens of thousands of Chinese soldiers. Both Russia and China now boast gold-backed currencies which countries around the world find more attractive that the Fed fiat dollar. His conclusion: Russia and China, while fighting our Deep State, plan to destroy and conquer America in the process. Then they will be in control of the world. From today's vantage point, with the US federal government being a captured operation staffed with treasonous and incompetent jerks, Mike's scenario does not seem far fetched at all.

Who knows who our criminal syndicate government lies in bed with today. We know Biden, his family and a long, long list of US politicians and political insiders are fully owned by Russia, China, or both. We know the Nazi regime in the Ukraine laundered their money, trafficked to them human beings of all ages into all types of enslavement, and allowed bioweapons development for culling the world population. The corrupt UN and conjugate organizations like the WHO and IPCC are agenda-driven mini syndicates themselves. None of these entities offers anything at all to the well-being of mankind.

Yet here we are, a country captured through a stolen election no one can deny, with the military sitting quietly as the imposters destroy our country and therefore the world. Not one item pursued by these criminals helps the American people one iota. Hey military! You pledged to uphold the constitution. Your fealty lies with the American populace. When will you people entrusted with our safety and provided BY US with the best military weaponry and tools available going to step up and defend our country?

Each moment these criminals linger in governmental power, no matter how fake that may be, moves us ever closer to the point of know return. Yes, we must abolish government schools, the FDA, EPA, CIA, FBI and almost the entirety of the federal bureaucracy as well as downsizing state governments to subsistence levels. Parents need to be responsible for their kid's entire

education not expecting their neighbors to pay for it. And corporate medicine must die by their fabricated pandemic and remdesivir of the Fauci protocol as we see happening now before our very eyes. But OUR military needs to help us out. **We own the military.**

We the People must rise up and take our country back. This means overturning the fraudulent election and installing the rightful winners including Donald J. Trump. America needs his proven competent leadership more now than ever before. And it also means arresting and jailing all who participated in pulling off that fraud including the covid nonsense, doctors administering the Fauci protocol, the 2000+ mules and all those NGO workers and their bosses like Stacy Abrams.

If we don't get this thing straightened out very soon, nothing will be left. The impending food and energy starvation manufactured by the NWO criminals will result in mass chaos.

And sadly, the future world conceived by visionaries like Susan Rohr and other people of faith, character and commitment will be aborted by the Satanist cabal before it can be born, another blood sacrifice to Moloch.

WE can't let that happen. We must fight with everything we have. We're worth it!

Our Vision

We aspire to a world in which people, made in the image of God, reconciled to Him by Jesus Christ, and reflecting God's own creativity, work together to enhance the fruitfulness, beauty, and safety of the Earth, enabling more and more of our neighbors to enjoy good health, long life, freedom, justice, and spiritual and material abundance, for the glory of God and the good of our fellow man, thus fulfilling the two Great Commandments to love God and love our neighbor.

Our Mission

We seek to magnify the glory of God in creation, the wisdom of His truth in environmental stewardship, the kindness of His mercy in lifting the needy out of poverty, and the wonders of His grace in the gospel of Jesus Christ.

Our Identity

A coalition of theologians, pastors, ministry leaders, scientists, economists, policy experts, and committed laymen, the Cornwall Alliance is an evangelical voice promoting environmental stewardship and economic development built on Biblical principles.

Schedule a Speaker

Dr. Beisner and many Fellows, Adjuncts, and Contributing Writers are available to speak for churches, seminaries, universities and colleges, schools, and other groups. To schedule a speaker, email Calvin@CornwallAlliance.org.

Climate Colonialists Disrupt African Pipeline, Perpetuate Poverty

By Vijay Jayaraj, May 3, 2022

Climate activists' ill-founded opposition to fossil fuels threatens to stop a major pipeline project in East Africa and stymie economic growth in Uganda and Tanzania — home to some of the world's poorest people.

Uganda is betting big on its fossil fuel reserves. In February, China National Offshore Oil Corporation (CNOOC) and France's TotalEnergies agreed to invest $10 billion to develop two Ugandan oil reserves. But the landlocked country needs the East African Crude Oil Pipeline project (EACOP) to transport its product to a port in Tanzania.

The 895-mile-long pipeline from Uganda's

Lake Alberta region to the seaport of Tanga will be the longest electrically heated crude oil pipeline in the world and will carry 216,000 barrels per day. The project received a green light for construction after the completion of an Environment and Social Impact Assessment.

The Africa Report says that the investment will be huge: "(A)bout $10 billion will be invested in the sector (oil and gas) before first oil is produced in 2025, mainly on the pipeline, refinery, and infrastructure. The government has been commissioning road construction in the region where oil will be produced, in Buliisa and Hoima districts, and an airport is also being constructed in the region." The project is expected to generate around 10,000 jobs even after the construction phase.

The Government of Uganda expects massive employment of its citizens during construction: "This will be through direct employment of about 14,000 people by the companies, indirect employment of about 45,000 people by the contractors, and induced employment of about 105,000 people as a result of the utilization of other services by the oil and gas sector. Of the direct employment, 57 percent are expected to be Ugandans, which is expected to result in an estimated $48.5 million annual payment to Ugandan employees."

However, the global war against fossil fuel has now reached Ugandan soil and extremists are determined to stop this lifesaving, economically critical project.

Vanessa Nakate of StopEACOP rants against the pipeline in a recent column in the New York Times, saying the project would bring poverty and destruction to the people of Africa. She also references extreme weather in implying the pipeline will worsen the climate.

During a visit to the ultra-rich Vatican, Vanessa says: "It is evident that there is no future in the fossil fuel industry…. we know the impacts on our food. We know the impacts on our water. We know the impacts on our livelihood…… the climate crisis is already affecting so many people not only in Uganda but the African continent."

But her reasons for opposing the pipeline are scientifically inaccurate and logically senseless.

She points to a forecast by the Intergovernmental Panel on Climate Change (IPCC) that predicts African droughts. But IPCC, by its own admission, has indicated that extreme weather events have no significant correlation with rising global average temperatures. Neither has there been any significant increase in the frequency of extreme cyclones, droughts, rainfall, and fires. Even if droughts and cyclones were to increase, a better socio-economic condition would enable people to adapt more effectively.

Contrary to Vanessa's hyperbole, the world is experiencing near optimum temperatures for global food production and the advancement of human society, much as it did 1,000 years ago during the Medieval Warm Period and 2,000 years ago during the Roman Warm Period. Globally, we now have better access to clean water, better access to nutritious food, people with higher income, and a very rapid increase in life expectancy rates. How are we in a crisis if the climate is aiding the improvement of every metric used to measure the quality of people's lives?

It is shocking how Vanessa ignores the plight of millions of her own people dwelling in persistent poverty and in need of affordable, dependable energy sources like coal, oil, and gas. It is less shocking if we understand the DNA of climate extremists, which has them deny the reality of energy needs and promote unreliable, primitive, and expensive wind turbines that even economic giants like Germany and the U.S. hesitate to adopt completely.

The Many Benefits of Rising Atmospheric CO2 — An Introduction

By Craig D. Idso, April 20, 2022

Atmospheric carbon dioxide: you can't see, hear, smell or taste it. But it's there—all around us—and it's crucial for life. Composed of one carbon and two oxygen atoms, this simple molecule serves as the primary raw material out of which plants construct their tissues, which in turn provide the materials out of which animals construct theirs. Knowledge of the key life-giving and life-sustaining role played by carbon dioxide, or CO2, is so well established, in fact, that humans—and all the rest of the biosphere—are described in the most basic of terms as carbon-based lifeforms. We simply could not and would not exist without it.

Ironically, far too many demonize and falsely label this important atmospheric trace gas a pollutant. Nothing could be further from the truth. Instead of being shunned like the plague, the ongoing rise in CO2 should be welcomed with open arms.

How do I know this?

During the past three decades of my professional career I have performed countless hours of research, conducted multiple experiments, published a series of professional journal articles, written several books, created videos and feature-length documentaries, and authored thousands of commentary articles exploring the effects of CO2 on the biosphere (much of that work can be found at my CO2 Science website, www.co2science.org). In all those activities I have come to know that, far from being a pollutant, this colorless, odorless, tasteless and invisible gas benefits the biosphere in a multitude of ways. And I want to share that knowledge with you!

To accomplish this objective, over the next several months I will be publishing a series of articles describing several key benefits atmospheric CO2 enrichment provides to both humanity and nature. The articles will explore topics such as the effects of CO2 on plant growth and water use efficiency, a CO2-induced greening of the planet, the

It's Climate Catastrophe Du Jour Season, Again!

H. Sterling Burnett, Ph.D., is the Director of the Arthur B. Robinson Center on Climate and Environmental Policy and the managing editor of Environment & Climate News.

By H. Sterling Burnett
Climate Change Weekly #434

Like Pandora's Box, global warming has been blamed for unleashing, or at least worsening, almost every manner of evil in the world—from crime to racism, mental illness to impotency, sports losses to alcoholism, wars to illegal immigration, premature births to incest among polar bears—and beyond.

Almost anything one can imagine that is bad in the world, alarmists have claimed, at one time or another, climate change is making it worse.

Whereas cartoon rascal Bart Simpson regularly proclaims "I didn't do it!"—when, of course, he usually did—climate alarmists shout "Climate change did it!" for almost any troubling trend or harmful event. Despite the lack of evidence linking the two. Or even the existence of a plausible chain of causation that would realistically link a modestly warmer world to the ills for which it is blamed.

As I've documented before, even when limiting the claims to extreme weather events or natural disasters—phenomena a region's climate provably impacts—climate alarmists often blame human-caused warming for producing contradictory or diametrically opposed weather trends or events.

Odd missives and foolish sporadic claims of climateexacerbated ills aside, there are certain types of events climate change is, like clockwork, claimed every year to be causing or worsening. Most of these occur in the spring and summer. Interestingly, each of these weather-related events have occurred with regularity for millennia. With such regularity, in fact, they have "seasons" named after them. In particular, I'm talking about "allergy season," "tornado season," "wildfire season," and "hurricane season."

Each of these "seasons" were proclaimed long before purported human-caused climate change was first raised as a possible concern in the late 1980s. Yet now, every spring, when allergies afflict sufferers, a tornado or hurricane strikes, or a wildfire starts, one can expect dozens of headlines and on-air stories attributing the problem to climate change.

It usually begins with "allergy season." For the past decade or more each spring people have been inundated with stories claiming climate change is causing the allergy season to begin earlier. In fact, this is the one "seasonal" problem which may be fairly linked to climate change. Extended allergy seasons are a result of the earlier onset of spring and lusher plant growth, an important beneficial impact of a warming world. As explored in two recent Climate Realism posts responding to stories published by the Associated Press and in The New Scientist, the longer allergy season is an unfortunate, but manageable, side-effect of the beneficial greening of the earth which is causing trees, plants, grasses, and food crops to grow larger, faster. This greening has contributed to the largest decline in global hunger in history. And the greater plant growth not only removes carbon dioxide from the atmosphere, but the allergycausing pollen emitted is great for pollinators like bees and birds.

Next up is "tornado season," typically running from March to early June. You haven't seen many headlines touting recordsetting tornado numbers or severity this year because, with less than a month to go in the season, it has thus far been a below-average year. As I write, only 508 tornadoes of all intensities have been recorded across the continental United States in 2022, compared to 1,200 in a typical year and more than 1,300 in 2021. Indeed, as reported in Climate at a Glance: Tornadoes, the number of tornadoes has been declining for the past 45 years, with the number of strong tornadoes, F3 or higher, falling dramatically. The United States set a record in 2017–18 for the longest period in recorded history without a tornado death, and it set a record for the longest period in history (306 days) without an EF3 or stronger tornado. Even the U.N. Intergovernmental Panel on Climate Change (IPCC) finds no evidence climate change is making tornadoes more prevalent or more powerful, writing, "[t]here is low confidence in observed trends in small spatial-scale phenomena such as

Continued on page 14

Public More Concerned About Energy Prices Than Supposed Climate Catastrophe

By H. Sterling Burnett, May 5, 2022
Climate Change Weekly #433

The inflation rate in the United States is the highest it has been in more than 40 years. Many people living today have never experienced the drop in buying power they are now. Historically high and rising energy prices are having a ripple effect throughout the economy, significantly increasing the prices of food and other essential goods and services.

As described in previous issues of Climate Change Weekly and two recent papers by Heartland Institute scholars, rising food and fuel prices are a direct result of President Joe Biden's climate and energy policies.

To fight climate change, Biden canceled the Keystone XL pipeline partnership with Canada, imposed a moratorium on new oil and gas leases on federal lands and the U.S. outer continental shelf; cancelled oil and gas leases in the Arctic National Wildlife Refuge, foreclosed drilling on more than half of the National Petroleum Reserve-Alaska, and proposed increasing the federal fees and royalties paid by oil and gas producers. Biden also forced new climate-change restrictions on infrastructure projects like pipelines, while simultaneously making it more difficult and expensive to ship natural gas by rail. He also imposed methane emission restrictions making it harder and more expensive to develop, store, and transport oil and natural gas.

A new survey, conducted by the polling firm Rasmussen on behalf of The Heartland Institute, indicates the public largely understands that high prices and shrinking buying power are the result of the Biden administration's disdain for U.S. oil and gas production and obsession with fighting climate change—and they are ready for a change, both of policy and leadership. (NOTE: The poll will be released publicly on Monday, but Climate Change Weekly readers get a preview.)

Despite nearly three and a half decades of the public being bombarded daily with alarming claims of a pending climate catastrophe, the Rasmussen/Heartland survey finds only 30 percent of voters believe it is "very likely" climate change will be catastrophic for humans, plants, and animals within next century. Unsurprisingly having been raised on the pablum of false climate claims since birth, the youngest cohort of voters are the most concerned about climate change.

While the so-called climate crisis may not be ringing many alarm bells among most voters, the survey shows, high energy prices certainly are. Eighty-two percent of voters say they are either "very" or "somewhat concerned" about rising energy and gas prices under the Biden administration.

In response, 60 percent of those surveyed, a clear majority, strongly favor or somewhat favor, passing laws to "dramatically increase oil and gas drilling in the United States." Indeed, by an 18 percentage point margin, survey participants said President Biden and Congress should focus more on "increasing oil and gas drilling to help reduce energy prices" than "limiting carbon dioxide emissions in an attempt to reduce climate change."

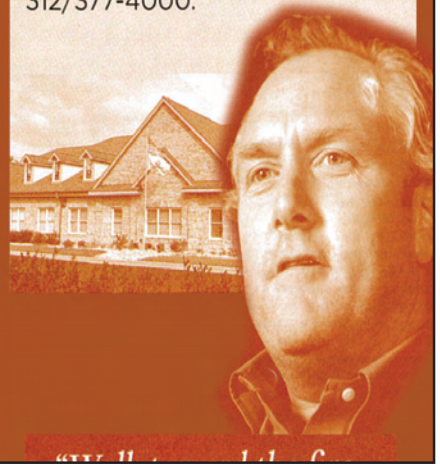
ANDREW BREITBART FREEDOM CENTER AT THE HEARTLAND INSTITUTE

On March 1, 2016, on the fourth anniversary of his death, The Heartland Institute dedicated the public meeting space in its new home in Arlington Heights in honor of Andrew Breitbart.

The Andrew Breitbart Freedom Center is a state-of-the-art meeting facility with seating for 75. Events are scheduled to take place every week in the space, featuring authors of new books, freedom activists and thinkers, and civic and business leaders.

"Andrew Breitbart was a genuine American hero," said Joseph Bast, president of The Heartland Institute, in a video announcing the dedication. "He inspired millions of people to stand up and speak the truth about what is happening in America. We could not be more pleased to have his name forever affixed to The Heartland Institute. We are honored that his family and friends believe this is a suitable addition to his legacy."

For more information about the Andrew Breitbart Freedom Center, please contact Nikki Comerford at ncomerford@heartland.org or 312/377-4000.



How I will Vote, and Why

By Viv Forbes of the Saltbush Club

The Liberals cannot be trusted to control Australia without adult supervision. But to replace them with an ALP/Green/ABC/Teal government would be a disaster. So voters must ensure that Liberals can form the next government, providing they have mature overseers. Voters must ensure there are new sensible people holding the balance of power in Australian parliaments. We need people who understand that:

• The "Man-made Climate Crisis" is a fraud. Natural cycles control the climate.

• "Net Zero Emissions" is a destructive, impossible green dream.

• Hydrogen, Pumped Hydro and Big Batteries are all net-consumers of energy. They can store energy and recycle it, but that round-robin process is always a net consumer of energy.

• Carbon Capture and Storage and "Clean Coal" are con games designed to consume more hydro-carbon energy for no public or environmental benefit. They would enrich big businesses.

• Reliable affordable electricity for industry and homes is best supplied by coal, gas, hydro or nuclear power.

• While the world scrambles to get coal supplies, Australian bureaucrats have delayed coal exploration and development for decades. And we can mine and export uranium, but not use it. These follies must stop.

• All electricity generators should be treated equally – no special taxes or subsidies. They should be obliged to provide their own backup power and their own connections to the grid.

• Electric cars may suit rich city folk (who forget they are powered mainly by coal). But battery-electric engines are an impossible dream for dozers, tractors, harvesters, road trains, aeroplanes and bulk carriers. The supply chains that deliver daily food, fuel and services to the cities rely totally on hydrocarbon energy (diesel, petrol and gas).

• To moderate the effects of droughts and floods we need MORE DAMS NOW.

• We need a regulatory firestorm to clear the legislative litter of green and red tape.

• We have far too many complicated tax laws. We need to slash and simplify taxes everywhere, starting with abolition of payroll tax (the tax on jobs) and capital gains tax (the tax on capital improvements).

• Most politicians since the Whitlam era have helped to create a huge national debt. Unless we reverse this, our currency will be destroyed, opening the door to digital money, electronic rationing and "The Great Green Reset".

• We must abolish federal/state/local duplication, leaving more control with State and Local authorities and with families.

• The federal government should focus on defence, foreign affairs, quarantine and maintenance of free trade between states.

• We need a "back-to-basics" in public education, with less green indoctrination.

• Australia has a shortage of labour, and a surplus of people receiving welfare. Welfare for able-bodied recipients with no dependants should be reduced.

It is time to VOTE FOR REAL CHANGE. However, thoughtless rejection of the Lib/NP government will produce a government which is far worse – a Labor Government dependent on Greens and extreme Greens. We must use the power of preferential voting to break Liberal/Labor/Green Power.

Check out Topher Field on how to use Preferential Voting to get the best candidate elected:

https://www.youtube.com/watch?v=F88gVHaK3CM

https://www.youtube.com/watch?v=ITWXUiK5nHQ

Libs and ALP are both on the nose. It looks unlikely that either of them will hold a majority of seats. But if voters are not disciplined in how they vote, a bunch of deep greens posing as independents will grab enough seats to hold the balance of power. They will naturally support a radical Green/ALP coalition, and Australia will leap out of the frying pan into the fire.

However, with thoughtful and disciplined behaviour at the ballot box (for BOTH Senate and House of Reps) we can stop this green calamity with the help of sensible new politicians.

Our first election job – identify the worst candidates and parties. Preference them last on both House of Reps and Senate ballot papers when you vote.

The most dangerous candidates in this election are The Sneaky Greens – they pose as "independents" but are being supported by climate crazy millionaires and, if elected, will re-appear in their deep green uniforms. Unless you know better, put all "independents", Teal Greens, Climate 200 and Get-Up supported candidates last.

Have a look here to see how they operate and what they plan:

https://www.climate200.com.au/

https://www.getup.org.au/

Just above the Sneaky Greens and "Independents" put the declared Greens and their ALP allies. Then select all Liberals above all of the Green/ALP alliance and "Independents".

Then focus on who should get your top votes. Choose your numbers 1, 2, 3, 4 etc candidates from the Freedom-Friendly-Minor-Parties (FFMP) giving preference to whomever you like from the parties below:

• Campbell Newman, Topher Field and the Liberal Democrats

• Pauline Hanson, George Christensen and the One Nation Candidates

• Clive Palmer, Craig Kelly and United Australia Candidates

• Bob Katter and Katter Australia Party

• Barnaby Joyce, Matt Canavan and National Party Candidates

• Bob Day and Australian Family Party Candidates

Put low numbers against all FFMP candidates so your vote preferences flow on and accumulate. Number every square all the way down to Unknown independents and the climate-crazy Teal "independents".

For the Senate (which has a large complicated white ballot paper) it is safer and easier to number every square above the line, using the same party ranking rules as above.

Australia is facing a crisis. We hold a large rich continent with a small population. It is lightly defended with inadequate weapons. Wars are fought for living space and resources. To our north (and sneaking down to the East) are the teeming millions of Asia.

Australia has huge resources of minerals, energy, timber and food but too much is sterilised in nationalised parks, world heritage areas, or buried under rainbow serpents. We have to import farm labour while we pay Australians not to work. Now our grasslands and farms are being suffocated beneath subsidised green energy paraphernalia while speculators tout capital-destroying dreams like hydrogen. Our education system devalues maths and science, despises educational excellence and offers an expanding array of soft options. Our immigration policy seems to encourage racial tension while our military leaders seem more concerned with diversity and zero emissions than with discipline and skills.

It requires thoughtful dedication to save Australia at this late stage. It will get worse before it gets better. We cannot allow those who created this crisis to control our next chapter. Australia's revival must start with this election.

Responsibility for electoral comment here is taken by Viv Forbes, Ipswich-Boonah Road, Washpool, Qld, Australia. He grew up in the Menzies era, completed National Service, was once a member of the Liberal Party, and has led Senate Teams for two different Freedom-Friendly-Minor-Parties. He is not currently a member of any political party, nor a candidate in the coming federal election. He has studied politics and economics at the University of Queensland and economics at the Foundation for Economic Education in New York.

African Pipeline

continued from p.3

Climate extremists like Vanessa are fostering the continuation of abject poverty in Africa — a continent with the lowest level of electrification and the highest rates of poverty in the world. Vanessa claims that the pipeline is another colonial project subjecting Africans to slavery. But, it is Vanessa and her ilk who are the colonialists and would-be slave masters.

Climate Change is about Control

cont. from p.1

regulation is to enhance the power of the authoritarian state, not protect the environment.

The radical Left has the world obsessing over whether we have 10, 20, or 50 years before the eve of destruction. The hysteria gives the government the excuse it needs for more controls over the energy we use, the products we purchase, the homes we live in, the food we eat, and since the pandemic when we can leave our homes. However, the data supporting the climate studies are rarely released so scientists can test the reproducibility of the studies.

Citizens of the United States already live under a legal framework that contains over 3000 separate criminal offenses in 50 titles of the U.S. Code, 23,000 pages of federal law, over 200,000 regulations, and almost daily Executive Orders that usually limit those actions deemed objectionable to the kakistocracy. Additionally, the government has in reserve 136 emergency laws allowing it to assume control over industrial production, communications and banking, and most aspects of commerce. Most of these emergency laws are effective when the president declares them effective.

"Predictions of apocalyptic events that would result in the extinction of humanity, a collapse of civilization, or the destruction of the planet have been made since at least the beginning of the Common Era." So far, the planet still exists. George Orwell noted - "People can foresee the future only when it coincides with their wishes, and the grossly obvious facts can be ignored when they are unwelcome."

In the case of climate change, those who foresee the future believe that capitalism is a cancer on the earth, humans must go, truth is irrelevant. The Left's Little Red Book on Forming a New Green Republic captures the many statements by the Left espousing these goals. One of its leaders, Prince Phillip, calmly states, "If I were reincarnated, I would wish to be returned to earth as a killer virus to lower human population levels." Perhaps Covid-19 gave him his wish?

The thumbprint of the radical Left is everywhere. In one year, the Biden administration used executive power to shut down the National Petroleum Reserve - Alaska, the Keystone Pipeline, and the EastMed natural gas pipeline that would supply gas to Europe. Without energy, the world crumbles, but that is a tactic the radical Left uses to achieve its agenda.

By shutting down U.S. energy supplies, Biden harms the security and economy of the U.S. The U.S. is forced to rely on terrorist states (Russia, Saudi Arabia, and now Iran and Venezuela), to produce dirty fuels so that we can chug along. Unless there is an ulterior motive, no sane world leader would ever put his nation at the mercy of terrorists.

The radical Left plays the federal regulatory system like a grandmaster pianist. With Citizen Suit provisions incorporated in all environmental laws, the Left routinely blocks industries needing federal permits.

SCIENCE & ENVIRONMENTAL POLICY PROJECT

The Week That Was May 13, 2022

Quote of the Week:

"It is the facts that matter, not the proofs. Physics can progress without the proofs, but we can't go on without the facts."

– Richard Feynman

****

Number of the Week:

2°F every half-hour

****

THIS WEEK:

By Ken Haapala, President Science & Environmental Policy Project (SEPP)

Scope: Ecologist Jim Steele presented new video on the influence of ENSO (El Niño Southern Oscillation) on earth's temperatures, including the Arctic. It amplifies his first video in the series "The Big 5 Natural Causes of Climate Change." The first video was on the Atlantic Multidecadal Oscillation (AMO). These natural variations are largely ignored by the global climate modelers, the UN Intergovernmental Panel on Climate Change (IPCC), and its followers in western governments. As such, the climate models have become more instruments for persuasion, rather than illumination or understanding. Using them for policy is economically destructive.

More than ten years after the successful first effort, Anthony Watts announced another effort to expose the shoddy state of NOAA's instruments for recording surface temperatures. He is asking volunteers to photograph current stations to "find out what has changed, and how many stations have actually closed, gotten better, or gotten worse."

David Burton, who was an expert reviewer for Working Group 1: The Physical Science Basis of IPCC Sixth Assessment Report (AR6, 2021), reports the way the central planners of the IPCC keep the expert reviewers informed. It is an authoritarian system in its fullest.

Last October 31 to November 12, we had the 26th United Nations Climate Change Conference_, held in Glasgow, Scotland, United Kingdom, commonly referred to as COP-26. This May we had the United Nations Convention to Combat Desertification (UNCCD), discussed below. The theme is the same: the world is getting worse due to the use of fossil fuels. The UN-CCD non-science has the same bias as the UN-IPCC, ignore contradicting evidence! Can the UN issue a truly honest report?

An author of many books on energy, Vaclav Smil, offers reasons why we cannot rely on the magical (or delusional) thinking that was exhibited at COP-26. Fossil fuels are needed by humanity. Using current technology, wind and solar power cannot replace them.

Warming the Arctic: In Part 3 of "The Big 5 Natural Causes of Climate Change: How La Niña Warms the World," Ecologist Jim Steele builds on Part 1, Varying Atlantic Water Transport. In the earlier presentation Steele establishes that

"Jonathan Kahl's analysis of Arctic surveys between 1950 and 1990 & published in the pre-eminent journal Nature, found no rise in arctic air temperatures.

But after the 1990 shift of the Arctic Oscillation, which caused sub-freezing winds from Siberia to blow insulating arctic sea ice out of the Arctic, arctic air temperatures suddenly began warming several times faster than the global average temperature.

The loss of insulating sea ice increased the ventilation of stored ocean heat, warming the air but cooling the ocean. That warming offset, and obscured, the 25-year winter cooling trend in both North America and Eurasia, ... Clearly Arctic warming was due to regional climate dynamics, not global.

From Danish sea ice records and modern satellite photos, we see two distinct periods with very similar reductions in the extent of arctic sea ice. One during the 1930s and one since 2000. Those 2 periods of reduced sea ice are separated by an intervening 30-year period of increasing sea ice, suggesting sea ice is modulated by a natural oscillation.

"The Atlantic Multidecadal Oscillation [AMO] represents a natural cyclical dynamic where the northern Atlantic waters alternate between becoming warmer than the southern Atlantic and then become cooler.

"It cycles approximately every 60 years."

After showing graphs of temperature trends of the AMO between 1880 to 2010, Steele explains:

The decades with 0.3 to 0.5 degrees Celsius warmer north Atlantic waters coincide with the decades of reduced Arctic sea ice and rising global temperatures.

The decades between the 1950s to 1990s, when the north Atlantic's temperatures were 0.3 to 0.5 degrees Celsius cooler, Arctic sea ice increased and there was no global warming trend.

As climate scientist Moreno-Chammaro published in 2020, these alternating periods of warmer and cooler north Atlantic temperatures also correlated with changes in the Intertropical Convergence Zone or ITCZ

The ITCZ is a migrating band of rising air, that sailors called the doldrums, which also brings heavy rainfall. Over Asia and Africa, the ITCZ follows the sun to the Tropic of Cancer or Tropic of Capricorn according to each hemisphere's summer solstice.

The ITCZ is also the driver of the earth's Hadley Circulation that constantly transports warmth and moisture from the tropics towards the poles.

Where the north and south trade winds converge defines the ITCZ's position and determines where the rising branch of moist air of the Hadley Circulation will create a rainy season. Because the ITCZ determines the location of tropical rainy seasons, it leaves strong clues to how its location has changed over centuries and millennia.

Around 30 degrees north and south of the equator, the air moving towards the poles at the top of the atmosphere converges with upper atmospheric winds that are moving back toward the equator. This upper air convergence drives air currents downward to create a quasi-permanent high-pressure region at the surface.

Around 60 degrees north and south, the convergence of opposing surface air currents drives air upwards producing a quasi-permanent low-pressure region.

As the ITCZ migrates north and south, so do these inter-connected high- and low-pressure systems.

As illustrated by Zou's 2014 research, during the Little Ice Age as the ITCZ migrated southward, so did its associated pressure systems. Its more southerly location caused warm equatorial currents to be deflected southward by the point of Brazil.

The southward migration of the associated north Atlantic pressure systems also steered warm gulf stream waters more eastward, reducing warm water flows into the Arctic, resulting in cooler temperatures that enabled the greatest Arctic sea ice buildup in 6000 years.

When solar irradiance increased, marking the end of the Little Ice Age, the ITCZ and associated pressure systems all migrated northward.

Now, the more northerly location of the ITCZ guided more warm tropical waters north of the point of Brazil causing more warm water to flow across the equator and feed more warm water into the gulf stream.

Additionally, the northward shifting north Atlantic pressure systems increasingly drove more warm gulf stream waters into the Arctic, which reduced arctic sea ice.

Changes in solar irradiance and sunspot cycles correlate with that migration of the ITCZ. Three sunspot minimums and reduced solar irradiance occurred during the Little Ice Age and correlates with the ITCZ southward migration.

The increasing solar irradiance since the end of the little ice age correlates with the northward migrating ITCZ and our current warming trend.

TWTW reminds readers that "Nature, Not Human Activity, Rules the Climate"showed the importance of solar influence in changing the ITCZ (pp 11-13). This section discusses the Svensmark Hypothesis using the example of proxies of C-14 (indicating solar activity) and O-18 (indicating temperature) from a cave in Oman from about 8300 to 7900 years before the present. These proxies are but one of a number of examples. The correlation is unusually strong.

Steele goes on to explain that as Arctic sea ice thins, its insolation properties are reduced, and the Arctic ventilates much more heat than radiated by humanity adding CO2. Three-meter-thick ice can ventilate about 5 times more heat than humanity adds, one-meter-thick ice about 15 times more heat. After explaining that the climate modelers with NASA-GISS ignore the changing AMO, Steele concludes:

"Changes in natural climate dynamics firmly dispute alarmists' claims of a rapidly approaching CO2 driven climate crisis.

In Part 3, Steele explains how the ENSO (El Niño Southern Oscillation) affects earth's temperatures, including the Arctic. He begins:

"La Niñas promote clear skies over the eastern Pacific increasing solar heating. As a result, the eastern Pacific absorbs over 100 watts per meter squared more solar energy than it releases back to space. A similar but

Number of the Week: 2°F every half-hour

Tuesday, May 10 was a sunny, but chilly, spring morning in the Washington suburbs of Virginia. At 7 am it was 43°F; 8 am 47°F; 9 am 51°F, 10 am 55°F, 11am 61°F. The temperature was rising 4°F every hour or 2°F every half-hour for 8 half-hours. For 43 years, since January 1979, 2.3°F (1.3°C) is the rate at which the atmosphere is warming per century. Yet, Washington has declared a climate crisis? It's doubtful if anyone in Washington can notice a half-hour difference in temperature on a typical spring morning.

No doubt, if the rate of rise of 2.3°F continued every century for 800 years, there would be reason for concern. But there is no physical evidence that carbon dioxide is the primary cause of this increase, and that the 2.3°F will continue for 800 years. Yet, global climate models not only greatly overestimate warming of the atmosphere, but they also fail to allow for a cooling that occurs naturally.

The Science & Environmental Policy Project began in late 1990 as a research effort by atmospheric physicist S. Fred Singer and a handful of graduate students working out of a small office in downtownWashington, D.C.The Project had two goals: (1) to gather material for a book on global environmental issues,and (2) to conduct a survey of scientists affiliated with the UN Intergovernmental Panel on Climate Change to determine the extent of what was, even then, being touted as scientific "consensus" on global warming.

What the graduate students discovered with their survey convinced Dr. Singer to set his book aside and instead to circulate among senior members of the American Meteorological Society a "Statement by Atmospheric Scientists" on greenhouse warming, which was quickly endorsed by 46 leading climatologists and atmospheric physicists (and eventually by nearly 100). That statement, issued on February 27, 1992, drew widespread media attention and was cited more than 150 times in the press. It was the first inkling journalists had that there was no scientific consensus on the reality of a global warming. Indeed, there was raging debate.

The Science & Environmental Policy Project was incorporated in the state of Virginia in 1992, and established as a nonprofit, 501(c)3 educational organization in late 1993. Today, having expanded from that core of 46 scientists, it draws on an international network of some of the finest minds in science who donate their time to promoting sound, credible, peer-reviewed research as the only basis for the health and environmental policies that affect us all.

You can help in two ways:

1. Download SEPP reports, press releases, and articles and pass them on – to newspaper editors, journalists, educators, civic leaders, and others. Help stop the fearmongering and the distortion of science.This is the most important thing you can do.

2. Support SEPP with your tax-deductible contributions. The environmental pressure groups, which present so much wrong information, have a combined clout of more than $1 billion a year.The Science & Environmental Policy Project has had far-reaching impact on less than one-hundredth of one percent of that figure. It's money well and effectively spent.

Send your contributions to:

The Science & Environmental Policy Project

Tel/Fax 703-920-2744

And thank you.

Global Warming May Be Saving Lives

One of the more preposterous claims by climate change alarmists is that a warming planet imperils food production. Obviously, plants and crops grow much more bountifully in warm weather and CO2 increases vegetation. Severe cold weather kills far more people than severe warm weather.

Now we have official confirmation of this from Britain's Office for National Statistics, which has issued a report concluding that over half a million fewer people died in England and Wales over the last 20 years due to a small rise in temperatures, according to recent work by the Office for National Statistics. The number of lives saved were 90% attributable to milder winters and 10% to warmer summers and represented three times the number lost to COVID-19.

https://www.ons.gov.uk/peoplepopulationandcommunity/birthsdeathsandmarriages/deaths/articles/climaterelatedmortalityandhospitaladmissionsenglandandwales/2001to2020#

Table 1: Total change in selected causes of death affected by temperature, estimated counts
England and Wales, 2001 to 2020

	2001 to 2020			Average per year		
	Change in deaths	Minimum	Maximum	Change in deaths	Minimum	Maximum
More warm days	-45,538	-47,820	-43,257	-2,277	-2,391	-2,163
Fewer cold days	-509,556	-537,670	-481,441	-25,478	-26,884	-24,072
Net change	-555,094	-585,490	-524,698	-27,755	-29,275	-26,235

Source: Office for National Statistics – Death registration data for England and Wales

Have you read about this anywhere in the U.S. other than on these pages??? The U.S. media has almost completely ignored the report as did much of the British news services. It's no wonder why: this science finding doesn't comport with the fake doom and gloom "scientific consensus" that the media invented.

Concerned about Energy Prices *cont. from p.4*

Of the various demographic categories surveyed—age, gender, income range, marital status, parental status, and race—only youths 18 to 39 prioritized limiting carbon dioxide emissions over increasing oil and gas production. But even that was a close call with 18-39 year olds favoring carbon cuts over oil and gas increases by 39 to 37 percent, a mere two percentage point difference.

This survey reiterates the fact that when push comes to shove, for most people, energy- andeconomic security trumps climate change when asked which is more important.

The public's ranking is astute. Data indicates climate change is not worsening weather conditions, human health, or the environment, and the best research indicates continued modest warming poses, at most, ephemeral threats to future planetary and human well-being. By contrast, oil and gas are—and for the foreseeable future will remain—vital to maintaining Americans' present standard of living and current lifestyles, and to ensuring our continued economic and national security. In addition, if one is concerned about reducing hunger and poverty around the globe, fossil fuels are also crucial to solving those problems, as well.

President Biden's and congressional Democrats' popularity and poll numbers are already upside down, especially on bread and butter issues like the economy that matter to voters most at the moment. Accordingly, if they want to have any chance of maintaining their majority in Congress in the mid-terms, they should take this poll seriously. For too long, Democrats have been led by the radical rump of the party, acting as if "The Squad" represents the majority of the public's desires on energy and climate issues. They don't now and never have, which this survey confirms.

As proof, another Rasmussen/Heartland survey, released Thursday, found 55 percent of likely voters had a very or somewhat unfavorable opinion of President Joe Biden, compared to just 42 percent holding a very or somewhat favorable opinion of the him. Sixty-one percent of those surveyed said Biden should not run for President again, and likely voters indicated they would vote for either former President Donald Trump or Florida Gov. Ron DeSantis over Joe Biden if a heads up election were held today.

As my colleague Linnea Lueken stated in a recent press release describing the Rasmussen/Heartland survey results, "this poll confirm that Americans have far different priorities than the Biden administration. Americans are worried about being able to afford the fuel that they need to work and live, and they know that our current oil and gas energy infrastructure is insufficient. … Our elected officials should take note." *SOURCES: The Heartland Institute; The Heartland Institute; Rasmussen/Heartland Institute Survey*

Climate Change is about Control *cont. from p.5*

Wielding the power of the citizen suit provisions, the radical Left uses the Clean Water Act to regulate farming and home building since water flows over the land. The Left uses the Clean Air Act to deny permits to almost any activity having air emissions, which includes manufacturing, energy production, and transportation. The National Environmental Protection Act is used to stall permits for years, sometimes decades, merely by alleging a thousand-page environmental impact statement is not sufficiently robust.

In addition to impeding economic development, the radical Left forces government to regulate almost every item in the home, including dishwashers, washing machines, showerheads, toilets, ceiling fans, light bulbs, heating and air conditioning units, stoves, ovens, refrigerators, and conventional cooking products. Seventy-four regulatory standards cover these products. Another 15,000 products, from coffee pots to ink cartridges, are regulated by the Consumer Product Safety Commission.

Now the radical Left wants to ban many common foods, including sugar, chocolate, coffee, meat, palm oil, soybeans, mineral water, plastic bottles, fish, especially salmon, rice and cereal, and any fruits and vegetables that require water.

Another radical Left group identifies the top 10 foods that harm the climate: lamb, beef pork, chicken, turkey, salmon, canned tuna, cheese, eggs, and potatoes.

But for plastic packaging that preserves our food, the radical Left has 25 reasons for banning it. They also want to ban soda straws – but say nothing about billions of pounds of plastic and polysilicon solar panels embedded with toxic metals.

Now the radical Left is demanding the Federal Reserve break up banks if they make loans or investments in operations that harm the earth.

These restrictions rest on a political narrative that our way of life will result in an apocalypse. The apocalypse narrative disguises the government's real agenda - a more authoritarian government.

It's all about authoritarian control, stupid!

The only appropriate summation of this article is to quote David Forman, a radical Left environmental movement founder. Forman states, "Phasing out the human race will solve every problem on earth, social and environmental."

Based on the hypocritical actions of many of the Left's leaders, like Gavin Newsom, Gretchen Whitmer, Lori Lightfoot, AOC, Nancy Pelosi, Stacy Abrams, and hundreds of others, it should be assumed they would be exempt from Forman's phase-out.

William L . Kovacs is the author of Reform the Kakistocracy, the winner of the 2021 Independent Press Award for Political/Social Change. His second book, The Left's Little Red Book on Forming a New Green Republic, quotes the Left on how it intends to control society by using climate change to eliminate capitalism, people, and truth. Mr. Kovacs has served as senior vice-president for the US Chamber of Commerce, chief counsel to a congressional committee, and a partner in law DC law firms.

Build More Dams

By Viv Forbes

Since the days of Joseph in ancient Egypt, droughts have periodically rationed water and food supplies for humans and wildlife. Sensible peoples store water, but it is about 40 years since Australians built a big dam – young Aussie engineers have no damn experience.

Even beavers build dams and weirs to provide long-term wetlands and food supplies along rivers. Dams also moderate floods downstream.

Foolish children and Green politicians think that floods are caused by carbon dioxide, but farmers know that it is La Nina that brings flooding rains to Eastern Australia.

Right now, La Nina flood-water is pouring down rivers like the Herbert, Burdekin, Pioneer, Fitzroy, Dawson, Mary, Maroochy, Condamine, Bremer, Brisbane, Richmond, Clarence, Macleay, Goulburn, Snowy and the mighty Murray-Darling. And our few dams and weirs are now spilling too much water.

But climate cycles will change and El Nino droughts like "Federation" and "Millennium" will come again.

When that happens, we will again find rivers dry, wetlands parched, crops desiccated and water rationed because we did not store enough La Nina water.

Rising Atmospheric CO2 *cont. from p.3*

monetary benefits of rising CO2 on crop yields, and much, much more. Look for the postings at a rate of about two per month.

Sadly, most of the population remains woefully unaware of the many positive impacts of CO2 on the biosphere. This is no surprise, considering the constant and steady stream of misinformation our society endures from sources dedicated to demeaning and defaming CO2. What is more, world governments, non-governmental organizations, international agencies, societal think tanks, and even respectable scientific organizations attempting to assess the potential consequences of increasing atmospheric CO2 concentrations have spent hundreds of millions of dollars writing and promoting large reports about it.

Yet, these endeavors have failed miserably because they have neglected to evaluate or even acknowledge the manifold real and measurable benefits of the ongoing rise in the air's CO2 content. As a result, many important and positive impacts of atmospheric CO2 enrichment remain underappreciated and largely ignored in the debate over what to do, or not do, about anthropogenic CO2 emissions. And that omission does not bode well for policy decisions.

I hope you will join me on this informative journey as we explore the many benefits of CO2 and I hope you will share what you read and learn with others. Societal change occurs as individuals become informed one by one. Together we can help make that happen!

This piece originally appeared at MasterResource.org and has been republished here with permission. This article is the first post in a series. You can read the second article here.

America After Roe V. Wade

By Gary L. Wickert

Following the leak of the Supreme Court draft opinion written by Justice Samuel Alito which portends an overturning of the almost-50-year-old Roe v. Wade abortion decision, both pro-life and pro-abortion activists raced to the Supreme Court. There were posters, coat hangers, prayers, chants of "pack the court" and "abolish the court", weeping, and more. But few of the protesters fully understand what a post-Roe America would really look like. Even fewer grasp the significance of the unheard-of leak of an unpublished opinion by someone within the workings of the Supreme Court. It is the latest in a protracted line of efforts to tear down the institutions of the United States of America.

Abortion has been with mankind since ancient Egypt. Abortifacients (herbs that produce miscarriage) and procedures similar to today's dismemberment abortions were in use by the Greeks, Romans, Egyptians, and Jews. Debates over the moral and religious ramifications of abortion have always been with us; and always will be. Greeks and Romans practiced abortion under the assumption that a fetus was more "plant-like" than human. Persians—on the other hand—saw the unborn as equal individual human beings.

The word "abortion" is not mentioned in the Bible, but there are many verses which speak to the issue. Exodus 21:22-25 reads:

"If people are fighting and hit a pregnant woman and she gives birth prematurely but there is no serious injury, the offender must be fined whatever the woman's husband demands and the court allows. 23 But if there is serious injury, you are to take life for life, eye for eye, tooth for tooth, hand for hand, foot for foot, burn for burn, wound for wound, bruise for bruise."

The distinction made here between the fetus and the mother is vital. In Jeremiah 1:5 God says: "Before I formed you in the womb, I knew you; before you were born, I sanctified you; and I ordained you a prophet to the nations." Jeremiah clearly brings to our attention the sovereignty and control of God and the importance to the Almighty of an unborn person.

I am pro-life. When I ran for the Wisconsin Assembly I was endorsed by Pro-Life Wisconsin. Roe v. Wade is as unsound of a constitutional decision as the Court has ever issued; fabricating a "right of privacy" out of thin air. From a constitutional perspective—politics notwithstanding—it should be overturned. At the same time, it is important to know what will replace it. Roe has served as a check and balance on abortion rights following years of individual states' therapeutic abortion statutes which were inconsistent, confusing, dangerous, and ever-changing. If overturned, Roe will be replaced by a void that individual states will quickly fill. Overturning it will not result in a ban on abortions. States like California, Oregon, Massachusetts and others would become abortion safe havens, legislating to allow abortion up to and, sadly, including the day of birth...or worse. If Roe is nullified, the biggest impediment to abortions after the first trimester will be nullified along with it. Instead of one decision blanketing a nation, we will be left with 51 different Roe v. Wade-type decisions from the high courts of each state and D.C., constantly changing and being challenged. Prior to 1973, we had a patchwork system where women in certain cities, like New York, had much better ability to be able to get to a licensed provider and to afford a provider than women who lived in rural areas.

Today we have more options than we did in 1973. The most common type of medical abortion is medication—a pregnancy termination protocol that involves taking two different drugs, Mifepristone and Misoprostol, that can be safely used up to the first 70 days (10 weeks) of pregnancy. Some states will outlaw such protocols, but with about as much success as laws prohibiting the use of marijuana.

There are 12 states that have passed "trigger law." These laws ban abortion after 6 weeks, 15 weeks or altogether and go into effect as soon as the Supreme Court reverses Roe v. Wade. states where the legislatures are sympathetic to abortion rights are also enacting laws to expand and protect such rights and to counter the movement in states limiting abortions. Sixteen states plus the District of Columbia protect the right to abortion through state law and other states, like New Mexico are likely to pass similar laws soon. California passed a major law protecting the privacy of women wanting abortions and addressing racial and economic inequities in access by providing abortion coverage under Medicaid. Oregon passed a law providing financial aid to abortion providers. Washington state passed a law prohibiting legal action against those who seek abortion and those who help them.

The Maryland legislature recently passed a law which would appropriate money to train medical professionals, such as nurse practitioners, nurse midwives, and physician assistants, to perform abortions. Expect other states to follow in Maryland's footsteps and increase their capacity to conduct abortions. (The state's Republican Governor Larry Hogan, vetoed the bill but it was overturned by the legislature.)

Supporters and detractors of a possible overturning of Roe v. Wade should know that Congress could simply step in and pass a law codifying the protections of Roe and guaranteeing that abortion would remain legal throughout the country. Federal funding for abortions is in the pipeline after years of the Hyde Amendment prohibiting same. Sadly, we will likely see successive parties in control of Congress legalizing and then limiting the right to abortion as the pendulum control of Congress swings back and forth. Those claiming that Roe v. Wade should be overturned because it has led to endless division and political fighting should know that overturning the 1973 decision will not end these things. In fact, it may make them worse.

Know also that blowing up the non-existent "right of privacy" could affect other decisions based on that right, such as the landmark privacy decision in Carpenter v. United States, ruling that the government must get a warrant before accessing a person's sensitive cellphone location data. There may well be an effort (supported by some Republicans) to amend the Constitution specifically to include the right to privacy which the Court fabricated in 1973. These are issues and possibilities that we have not contemplated for 50 years.

Overturning Roe is appropriate from a constitutional standpoint. It is not a constitutionally-sound ruling and has weakened our Constitution ever since it was decided. It is time for the American people to decide these significant issues, rather than a group of appointed jurists. However, throwing the issue to Congress is not a panacea. Currently, 48% of Americans say abortion should be legal only under certain circumstances, 32% say it should be legal under any circumstances, and 19% feel it should be illegal in all circumstances. If history teaches us anything, it is that abortion will never be outlawed completely in America. There are sixteen countries where abortion is prohibited altogether, a list that includes Egypt, Iraq, the Philippines, Laos, Senegal, Nicaragua, and other third-world countries. However, twenty-six states are certain or likely to ban abortion if Roe is overturned.

The protesters at the Supreme Court recently should know ahead of time what will replace the 50-year-old ruling and that it will open new battlegrounds. Conservatives are about to take the first step toward retaking our country from those attempting to destroy it. I fear overturning Roe will motivate America-haters like never before. I pray that doesn't happen. When you allow critical race theory to attack our country, when you threaten to pack the Supreme Court, when you attack our history and tear down our statues, and when you lawlessly attack our institutions, this sort of Supreme Court leak is the predictable result. Nothing in America is sacred to far too many people. We take a lot for granted here and America itself hangs in the balance. Let's pray for the strength to never take America itself for granted; or we could find ourselves throwing out the proverbial baby with the bathwater.

This Abortionist Travels From State to State to Kill as Many Babies in Abortions as Possible

By Micaiah Bilger, Apr 27, 2022

Shelly Tien is one of about 50 traveling abortionists in the U.S. who rushes from state to state aborting unborn babies and then leaving their mothers to suffer the consequences on their own.

But Tien and other abortionists often are portrayed as heroes in popular culture for their unnecessary, life-destroying work.

This week, Reuters published a profile of Tien, who works full-time at a Planned Parenthood in Jacksonville, Florida, but also travels to Alabama and Oklahoma to abort unborn babies.

Tien told the news outlet that she does abortions because she believes in the saying "Medicine = science + love."

But her abortion practice is not based on science, medicine or love for her patients. Almost all of the nearly 1 million abortions in the U.S. every year are medically unnecessary and completely elective, and each kills a patient – a unique, living human child in the womb. Many mothers are harmed by abortion, too, sometimes physically and often emotionally after they realize that their child's life was destroyed.

According to the report, Tien aborted 18 unborn babies in one day in March: six surgical abortions and 12 with abortion drugs.

Abortions: 63 million in 49 years; Not in the Constitution

By Bill Juneau, of WorldTribune.com

As the law stands today in the United States, a pregnant woman is entitled to obtain an abortion at her request, at any time and for any reason. So permissive is the existing federal law that a woman can call for and receive an abortion and the killing of her kicking fetus as she is being wheeled into the delivery room from her hospital bed.

Ending the life of the fetus in those final moments before the head leaves the womb is considered "murder" by millions, but under current federal law, late term abortions are legal and proper.

In 1973, the U.S. Supreme Court in Roe v. Wade, concluded that abortions are no longer forbidden, and henceforth will be allowed with Constitutional protection. The Constitution is deemed to recognize a woman's "right to choose" what happens to her own body.

Lost in the hysteria is the fact that the current debate about the existence of Roe v Wade is not really about outlawing abortion, it is more of a legalistic ruling about whether abortion should be a constitutional right or a state protected right. For right to lifers, the overthrow of the decision is unlikely to provide complete satisfaction.

The Roe decision has always been divisive in the United States. One side celebrated freedom for a woman to get pregnant, and the ability to abort the

Abp. Viganò: Roe v. Wade leak was Deep State 'propaganda operation' to 'radicalize' abortion debate, influence justices

(LifeSiteNews) – In recent days, the media has leaked the news that, according to a draft obtained from the Supreme Court of the United States, the justices of the Court are about to declare that the Roe v. Wade decision of January 22, 1973, is unconstitutional and must be overruled.

First of all, a widespread misunderstanding needs to be clarified: this potential decision of the Supreme Court does not address the moral legitimacy of abortion, but rather whether the 1973 decision conforms to the Constitution of the United States with respect to the sovereignty of the individual states. It is not therefore addressing an ethical or moral question with regard to the legitimacy of abortion, but rather a question of jurisdiction of the Supreme Court under the Constitution.

The vulnus [wound] that the Roe v. Wade decision inflicted on the sovereignty of the states of the Union is a constitutional matter, and the justices will have to make a ruling on it as such.

It is significant that this aspect of the decision has been deliberately not spoken about by the media, emphasizing instead the specific content of the decision and making it an ideological banner. It is also clear that this propaganda operation, maliciously conducted by the Deep State, has the purpose of radicalizing the debate that the news will stir up in public opinion, with the intention of influencing the motivations of the decision, which has yet to be finalized by the justices. It does not escape anyone's notice that the premature leak of the draft of the decision has provoked violent protest demonstrations organized by pro-abortion groups and Antifa, while at the same time scandalous provocations and sacrilegious attacks on Catholic churches during services are multiplying. The courageous witness of the Catholic laity ought to be encouraged and supported by the Shepherds of the Church, precisely in the name of that freedom of worship and preaching that is an inalienable right of the Church of Christ, as well as an inalienable constitutional right of all Americans under the First Amendment.

Thus, while Americans have yet to fully comprehend the scandals that are emerging about the criminal management of the pseudo-pandemic and the imposition of an experimental treatment that irreversibly modifies the human genome with still unknown long-term damage and serious side effects that have been culpably concealed by pharmaceutical multinationals and control agencies; while Special Counsel John Durham is preparing to conclude the investigation into Russiagate which will soon see Obama, Hillary Clinton, and Biden – whose accomplices include members of the highest levels of the Italian government at the time – investigated for their role in the suppression of Trump's presidential campaign (and hopefully condemned for high treason and attacking the institutions of government); while Joe Biden desperately seeks to cover up the cases of corruption involving his son Hunter in Ukraine, which disturbingly include his involvement in the biolaboratories located there in which research on the "gain of function" was carried out on the SARS-CoV-2 virus, altering its pathogenesis and its transmissibility; while the White House desperately seeks to blame the problems in the U.S. economy of inflation and the rising price of raw materials on the Russian-Ukrainian crisis; while NATO acts as an arms salesman in the service of the American lobby and tries to impede the peace negotiations between Putin and Zelensky at all costs – behold, the operation is ready with which to distract public opinion and radicalize the clash between pro-life and "pro-choice," after having successfully experimented with the same method of mass manipulation during the pandemic farce and even earlier with the George Floyd case and the exasperation provoked by the "Black Lives Matter" movement.

If the Supreme Court is to be reproached for anything, it is for having wanted to impose legalized abortion on the states of the Union in 1973, even where it was rightly prohibited: this abuse of power was tolerated because it was cloaked in the ideological prejudice of the Democratic Party that gave rise to a massacre of the innocents that cries out to Heaven for justice. The Roe v. Wade decision was an operation of deliberate partiality that violated not only the natural law and the law of God but also the very principles enshrined in the United States Constitution. If the justices are to heal this vulnus, they will limit themselves to applying the law that they have sworn to defend, something which their predecessors fifty years ago either did not know how to do or did not wish to.

And if it is true that on May 11 the United States Senate demonstrated that it is not aligned with the proponents of abortion (by its vote to block the "Women's Health Protection Act"), one cannot fail to notice the scandal given by self-styled "Catholic" politicians, first of all Joe Biden and Nancy Pelosi, who trample down without scruples the morality that instead they ought to commit themselves to defending in the social and legislative sphere.

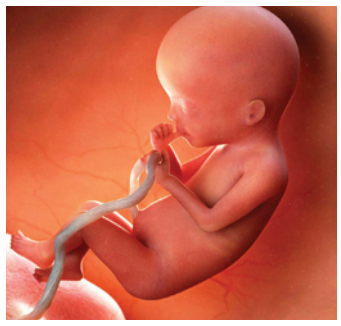
The Holy See and the United States Conference of Catholic Bishops ought to reaffirm, along with a firm condemnation of abortion, that American Catholics cannot and must not vote for elected representatives whose positions are not consistent with the Magisterium of the Church, and who as such are excommunicated. The embarrassing silence of the Hierarchy reveals itself as a confirmation of the sense of inferiority of those who ought to be wisely leading the people entrusted to their care, who instead are following them off the edge of a cliff along with the politicians whom the bishops supported in the last electoral campaign. Hearing Joe Biden advocate for abortion as a "fundamental right" – disguised under the hypocritical euphemism of "women's health protection" – proves the loss of any sense of the meaning of Catholic social commitment, for which not only the Hierarchy is responsible but also the entire system of Catholic education that looks to it for guidance. What sort of teaching is being given in Catholic high schools and universities if their graduates can declare that they support abortion without understanding its moral gravity? How can it be said that the killing of an innocent creature can be decided by the very mother who instead ought to protect the life of her child more than her own? Is this the "civilization" that Americans want to support and propagate? Are these the values that they want to pass on to future generations?

I am certain that Americans will not allow themselves either to be sidetracked by these operations of mass distraction or to be provoked by the pro-abortion protests that have been deliberately incited in order to foment clashes and violent reactions. Let us not forget that those who propagandize the killing of children are equally supportive of euthanasia, LGBTQ ideology, gender theory, the Great Reset, the pandemic farce, and the use of the Russian-Ukrainian crisis to weaken the nations of Europe and cover up the crimes of the Deep State.

Let us pray therefore that She whom we venerate as Sede Sapientiæ, the Seat of Wisdom, may illumine the minds of the justices of the Supreme Court and inspire them with a sense of justice so that they may recognize the sacredness and inviolability of the life of the unborn child. And may the Woman foretold in Genesis crush the head of the Serpent who is the first inspirer of the horrendous crime of abortion.

Just a 'clump of cells'? Amazing footage shows baby at 20 weeks gestation

By WorldTribune, May 8, 2022



Pro-life activists say high-definition footage which shows a preborn baby's activity at the 20-week gestation period crushes the pro-abortion cabal's narrative that the preborn are merely a "clump of cells" nearly until the moment of birth.

The footage shows a baby with detailed features, moving around in the womb, stretching its legs, and even showing a budding personality, Frankie Stockes reported for National File on May 6.

The high-definition sonogram footage shows the preborn wiggling around the womb and even fully extending its legs.

"At one point it even turns its head as if it is facing a camera and striking a quick pose," Stockes noted.

"At 20 weeks gestation, the bodily features of a preborn child begin to rapidly take shape, and they even experience hiccups and begin developing taste buds. A mother's food choices at this point in the pregnancy can begin to influence the culinary tastes of their child later in life. The baby becomes incredibly active in the womb at 20 weeks, bouncing around and delivering kicks throughout the day. The baby is even developing fingerprints at this point and can also experience pain," Stockes wrote.

The pro-abortion movement has long fought to stop protections for the preborn at 20 weeks gestation, arguing they are just a "clump of cells." Planned Parenthood "even compares the thought of such restrictions to murder, claiming they will kill women en masse," Stockes wrote.

Since the 1973 Roe decision that legalized abortion nationwide, over 63 million preborn American children have been killed.

Abortionist Travels

cont. from page 8

media network for the latest pro-life news free from Facebook's censorship!

In one case, a 22-year-old woman told Tien that she wanted her abortion to be kept secret from her baby's father because she was worried he would try to convince her to keep their child, according to the report. The only reason she gave in the report for wanting an abortion was because the man was not financially stable.

"I felt as if he was going to try to make me change my mind," the woman said, Reuters reports. "I don't want to change my mind."

Rather than encourage the woman to discuss the matter with the baby's father or provide information about the many financial resources available to families in need, Tien praised the woman for being "very strong," according to the report.

"Women are very strong," she told the woman while giving her abortion pills. "Women do this every day."

Afterward, Tien rushed off to catch a flight for her next abortion job in another state – leaving the woman and others without her follow-up services if they suffer complications later.

Tien is one of many. According to the National Abortion Federation, the U.S. has about 50 traveling abortionists who go from state to state doing abortions. Without them, some states would be abortion-free.

Here's more from Reuters:

Abortion clinics in at least six states – including those in Oklahoma and Alabama where Tien works – rely entirely on out-of-state doctors to provide abortions.

Safety concerns and the stigma around abortion keep many local doctors in conservative states from performing abortions, said Zack Gingrich-Gaylord, a spokesperson for Trust Women Oklahoma.

This is a common claim from abortion activists, but the pro-life movement is dedicated to peaceful, non-violent actions to restore unborn babies' right to life. The truth is that most doctors cannot in good conscience end the lives of their unborn patients in elective, unnecessary abortions, because they recognize that real medicine serves the needs of all patients, born and unborn.

Tien, however, said she is committed to doing abortions. When asked about the possibility of Roe v. Wade being overturned, she told Reuters that she plans to continue her abortion work "always."

"My plan is to always do abortions," she told the news outlet. "I'll do it legally, and I'll follow whatever state restrictions and regulations are in place. What that actually will look like, I'm not entirely sure."

If the U.S. Supreme Court overturns Roe, the Guttmacher Institute estimates 26 states "are certain or likely to ban abortions." Researchers estimate abortion numbers would drop by about 120,000 in the first year and potentially even more in subsequent years if the high court allows states to ban abortions again.

Meanwhile, pro-life advocates are working to expand support services for pregnant and parenting families in need so that every mother and father and every child have the resources to thrive.

GOVERNMENT CIRCUS

What is Really Needed

We Don't Need More Laws, We Need Accountability!

Wisconsin doesn't need more laws to force people to follow the current law. We need those who broke the law to be held accountable! From those in government to the private sector, they must answer for their actions. We must get back to the rule of law and stand with the people of Wisconsin!

Medical freedom and accountability are big issues this November. We must have the freedom to choose what is best for ourselves and our own health. The government has no business or authority to choose for us. This is clearly laid out in our state and federal constitutions. The state legislature can continue to write statute after statute, however if there is no consequences for the violation of our current law, what is the point to writing more laws? Why are we writing more laws to force people to follow the laws we currently have in place? I realize since March of 2020, everything is upside down backwards and inside out, but when are we as conservatives and Wisconsinites going to stand up and say "ENOUGH!"?

In Wisconsin we have a great constitution and several laws that protect this right. As Lt. Governor I will work with the Governor and Attorney General to see those who are responsible for these violations are held accountable! I have already begun to lay the ground work to start bringing accountability to those who have harmed the people of Wisconsin. I have qualified experts ready to testify and give evidence to the crimes portrayed upon the people of Wisconsin. If we allow those who broke the law to not have consequences for their actions there is no amount of laws written that will ever prevent the transgressions from the past two years from happening again.

It is time we take back our freedom and stop the cycle of politicians that lie, cheat and steal from us all. We need someone who has not sat back and waited for the government to stop these unlawful actions. We need someone who is not looking to be elected because of the title or office held, but is looking to be elected to regain the freedom of every Wisconsinite. I am that candidate. I will not seek another office after winning. If I lose my bid, I will not run for office again. This isn't a fight for an office, this is a fight for freedom. We must restore liberty in 2022, and beat Tony Evers. Then we must have accountability restored, and have elected servants who will tirelessly uphold and defend the constitution like I have the past two years.

Please consider volunteering for my team. You can sign up at www.yudesforltgovernor.com I also ask that you would consider supporting the campaign by donating. You can donate either by clicking on the "Contributions" button or by following this link: https://mailchi.mp/2b0c6847a0cf/donor-request

I also need your help gathering signatures to be on the ballot for the primary August 9th. Please follow the link to get signature forms. We need 2,000 signatures by May 25th. With your help, I know we can do it! Please go to https://bit.ly/3KYlvfX for signature form. Forms must have the following to qualify as a valid signature:

1. Individual must not have signed for another Lt Governor candidate
2. Legible handwriting for printed name and address
3. The municipality where the person votes. Example address is Eau Claire but vote in town of Seymore
4. Correct date

Please email signed forms back to info@yudesforltgovernor.com or mail the completed forms to address on the form. Thank you for your support! Together we will restore liberty and give government back to the people!

KYLE YUDES

Abortions: 63 Million in 49 Years *cont. from page 8*

developing baby at anytime, if so desired. Other millions believe that life begins at conception, and that abortion amounts to murder. In the following 49 years, 63 million abortions were performed in America, but not without public outcries and the bombing of abortion clinics.

Some states have enacted legislation setting time, place and manner checks on the performance of abortions, but other states like Illinois, New York, Maine, Vermont, Virginia and Rhode Island have ignored meaningful restrictions. The lack of restrictions allow these states to provide abortion "safe havens," for mothers wanting termination of their pregnancy without any slowing of the procedure.

The controversy and dissent over abortions has simmered for decades, occasionally boiling over as it is now, with the nine justices of the Supreme Court revisiting the Roe v. Wade opinion which had always been the target of scholarly legal criticism.

Just days ago, the controversy erupted with a new explosion of headlines and on-air comments and chatter on social networks after a draft opinion of the case under analysis was leaked and given to the media.

Though not representing the final disposition of the matter, the draft shot down the Roe v. Wade decision as "egregiously wrong from the start." The 87-page draft also contained a lengthy analysis as to why abortions have no genesis in the Constitution and it ordered that the question of abortions be addressed in the future by individual states.

The draft opinion, which apparently had

Step 1: 2000 Mules — Step 2: Pull the Ripcord

By J.D. Rucker, May. 8, 2022

The release of 2000 Mules, the documentary about massive, widespread voter fraud during the 2020 presidential election, has already made waves across the country. But if you thought the team of Dinesh D'Souza and True the Vote were done, think again. 2000 Mules was just the beginning.

According to their website, True the Vote is releasing the information used to make the movie, including information about the people responsible. According to The Gateway Pundit:

The movie discusses the Democrat-linked stash houses but does not mention any names or locations.

Last night Catherine Engelbrecht and Gregg Phillips announced they will be releasing ALL of the addresses of the ballot stash houses. Look for the Democrats to squirm.

In the movie credits the investigative team lays out what comes next. If you click on the QR code at the end of the movie you will see what is coming next.

As I tweeted after seeing the movie, "Any "conservative" who says we should move on from the 2020 election is asking us to abandon our oath to defend the Constitution. Until there is justice, there is no moving on."

We have a nation to save. That doesn't mean pretending like the 2020 election theft never happened. It means holding people accountable for their desecration of the Constitution.

To view the video visit www.thelibertydaily.com.

True The Vote Announces *cont. from page 1*

agencies in the state.

Catherine Engelbrecht: On balance, we are going to look back at this and a lot of what happened was the result of Americans in their spirit knowing something is going so wrong. Where do we start looking? And there wasn't clarity and passionate people were trying to figure this out… Where we find ourselves now is Americans are awake and they're increasingly awake. Hopefully what we are putting together they are going to be able to see and feel and have that belief that will encourage them. Their guts are right. This is happening. It's happening at a national scale…

…We just got Green Bay video. Or Brown County Wisconsin a week ago. So, it's coming…

Gregg Phillips listed four points that will make a difference in cleaning up US elections.

Gregg Phillips: I think there's going to be some very sophisticated technologies that are going to be employed from teams like ours and others that are going to come around and really make a big difference… Those four pillars.

• If they clean up the voter rolls. Do a meaningful job cleaning up the voter rolls.
• If they'll stop all this mail-in balloting.
• If they'll get rid of the drop boxes.
• And make these serious crimes. Make people pay for this stuff

Those four things will go a long way for cleaning up the problems that we're seeing.

And then Catherine Engelbrecht announced True the Vote was working with

Catherine Engelbrecht: Wisconsin… They're making great strides and investigations are ongoing. We arae now working with two local law enforcement agencies so we're excited about that.

Michigan, we're just starting to scratch the surface of Michigan.

This is good news for Wisconsin patriots who are concerned about free elections in the state.

EXCLUSIVE: Not a Single Voting System Testing Lab Used in the 2020 Election Was Accredited According to the Law at That Time – One Lab Never Was Accredited (Part II)

By Joe Hoft, May 16, 2022

We reported on the fact that no Voter System Testing Laboratories (VSTLs) used in the 2020 Election were accredited at the time of the election based on the law. One of these labs used to this day in some states has NEVER been accredited by the EAC based on the law.

We first addressed this issue when the Maricopa County leadership wanted a 'certified auditor' to perform an audit of their operations after the 2020 Election in Arizona. The County selected two firms and TGP pointed out that the two firms selected were not properly certified at the time. This was despite statements by Maricopa officials. Only hours after our report, the Election Assistance Commission (EAC) suspiciously certified the two firms we identified.

Yesterday we shared that the EAC Voting System Test Laboratory (VSTL) Accreditation Program Manual says the Chair of the Commission must sign off on the VSTL's accreditation and the accreditation shall not exceed 2 years.

Looking back at the accreditation process for the Voting System Test Labs (VSTL) used in Maricopa County noted a year ago, the two VSTLs selected were not accredited when selected by the county (Pro V&V and SLI) to perform audits of the county's 2020 Results.

Today, per the EAC's website, these are the only two accredited VSTLs.

The TGP shared this in our article on Sunday.

There is at least one other VSTL used as the accredited VSTL for the voting systems. This VSTL has actually never been accredited according to the law.

In the state of Missouri in at least one jurisdiction (St. Charles County), where there is a VSTL that has never been accredited that is claimed to have certified voting systems in the state.

Wyle Laboratories was accredited in May of 2010 for a two-year term effective through April 2012. There is no evidence that Wyle Labs was accredited at any time after that.

Then in 2014 Wyle Labs was purchased by National Technical Systems (NTS). A letter was sent to the EAC notifying them of the purchase. But remember at this time Wylen was no longer accredited for certifying voting systems and hadn't been since 2012.

Ten Things You Can Do Right Now to Save America

By Joseph L. Bast

If you attend meetings of patriots you have surely heard this lament: "There's nothing we can do about it." The left has taken over all the major institutions in society – the media, schools, government, businesses, even entire religious denominations. Elected Republicans often talk like patriots but vote like socialists.

It's easy to give up. And pessimism leads to infighting. Grover Norquist, the intrepid leader of Americans for Tax Reform, said it is easier to shoot people in your own fox hole than it is to stick your head up above the sandbags and shoot at the real enemy!

But the claim that "there's nothing we can do about it" is flat-out wrong. There are dozens of things every person reading this can do. Some patriots reading this do some of these things, sometimes, but very few do all of them, all the time. Is that asking too much? You never hit a target if you don't first aim for it.

Here are ten things everyone can do, starting today. In future columns I'll identify 30 more things you can do, ten at a time. And by the time I reach number 40, I suspect readers will have suggested 20 or 30 more things I hadn't thought of.

1.Sign up for emails from NEW Patriots, Fox Valley Initiative, Wolf River Area Patriots, or some other Tea Party groups in your area.

2.Attend the meetings of NEW Patriots, Fox Valley Initiative, Wolf River Area Patriots, and other Tea Party groups.

3.Vote in every election. Encourage others to vote and offer to drive them to the polls.

4.Find out who your elected officials are, their voting records, and contact information.

5.Contact your elected officials, often, by email, phone, and letter.

6.Write letters to the editor to local newspapers. Keep them short and polite. Aim to write one every month.

7.Put up lawn signs and put a bumper sticker on your car.

8.Sign nomination petitions and help collect signatures from friends and neighbors.

9.Volunteer to help candidates or your local and county GOP organizations.

10. Contribute to candidates who have been endorsed by other conservatives.

You can find all the information and contacts you need to do every one of these things, for free, on a single website, called the Wisconsin Patriots Toolbox. It has a calendar of conservative events, information on how to register to vote and find out who your elected officials and how to contact them, and much more.

So now you have no more excuses. Go out and be a Super Patriot!

Visit the Wisconsin Patriots Toolbox at https://wipatriotstoolbox.com. Find out who your elected officials are and how they vote. Pick up the phone and call one of them today.

After Roe: A Conservative Action Plan for the U.S. Supreme Court

By Joseph L. Bast

Now that the U.S. Supreme Court is about to reverse Roe v. Wade, liberals are worried about what decisions the post-Trump Supreme Court might reverse next. They are right to be worried. Conservatives are eagerly discussing other decisions that should be reversed.

According to a recent article posted on Revolver, an online source of news and analysis,

"For decades, groups like the Federalist Society have fought to nominate and confirm judges who will roll back the excesses of those decades. And for decades, despite a consistent majority of Republican appointees, the Supreme Court has punted.

"Now, bolstered by President Trump's three appointees to the court, the tide may have finally turned. A five-justice majority is finally willing to say that one of the major rulings from a half-century ago was always wrong, should never have been created, and should be sent to the ash heap of history."

The essay then describes seven past Supreme Court decisions that are ripe for reversal. Doing so would expand individual liberty and stop the seemingly relentless advance of socialism in America.

A book published in 2008 titled The Dirty Dozen: How Twelve Supreme Court Cases Radically Expanded Government and Eroded Freedom, by Robert A. Levy and William Mellor, provided a longer list of bad decisions going back to the 1930s that ought to be overturned. The decisions criticized in the book are:

• Wickard v. Filburn (1942), which expanded federal power over intrastate production pursuant to the Commerce Clause;

• Helvering v. Davis (1937), which held that Social Security was constitutionally permissible as an exercise of the federal power to spend for the general welfare and did not contravene the Tenth Amendment;

• Home Building & Loan Association v. Blaisdell (1934), which held that Minnesota's suspension of creditors' remedies was not in violation of the United States Constitution;

• Whitman v. American Trucking Association, Inc. (2001), which held that Congress could delegate legislative power to the Environmental Protection Agency;

• McConnell v. Federal Election Commission (2003), which upheld the constitutionality of most of the Bipartisan Campaign Reform Act of 2002 (BCRA), often referred to as the McCain–Feingold Act;

• United States v. Miller (1939), which allowed federal regulation of sawed-off shotguns;

• Korematsu v. United States (1944), which upheld Japanese-American internment;

• Bennis v. Michigan (1996), which held that the "innocent owner defense" is not constitutionally mandated by the Fourteenth Amendment's Due Process clause in cases of civil forfeiture;

• Kelo v. City of New London (2005), which upheld the use of eminent domain to transfer land from one private owner to another to further economic development;

• Penn Central Transport Co. v. New York (1978), which upheld the denial of compensation for regulatory takings;

• United States v. Caroline Products (1938), which upheld federal regulation of goods traded in interstate commerce; and

• Grutter v. Bollinger (2003), which upheld the affirmative action admissions policy of the University of Michigan Law School.

One of these decisions already has been overturned: United States v. Miller was overturned in 2018 by the District of Columbia v. Heller decision, a landmark case that affirmed the individual right to keep and bear arms for self-defense.

As the authors of The Dirty Dozen say in a preface to a 2010 edition of the book, "that's one case down and eleven to go."

Rep. Janel Brandtjen Exposes 2020 Election Fraud at Event in New London

By Joseph L. Bast

Wolf River Area Patriots hosted a meeting in New London on April 26 that drew a big crowd, nearly 80 people attended. The meeting took place in the "Washington Center" — a huge old high school that has been converted into an assisted living facility. People were selling lawn signs that said "Trump 2024" and "Worst Governor Evers."

Chris Martinson, newly elected president of the New London school board, thanked the Tea Party for his election, said there is now a 5 to 2 conservative majority on the board, and they are battling to keep transgender training and Critical Race Theory out of classrooms and trying to bring back tech instruction (e.g., small engine repair).

WI State Rep. Janel Brandtjen talked about the 2020 stolen election and showed a clip from "Rigged: The Zuckerberg-funded Plot to Defeat Donald Trump." The documentary film is about 40 minutes long and features several Wisconsinites including Rep. Brandtjen and Justice Michael Gableman.

Brandtjen was terrific. Smart, brassy, self-confident, and well-rehearsed. Anyone who thinks the 2020 election in Wisconsin was "the most secure in history" hasn't met Rep. Brandtjen.

She said four things were unique about the 2020 election: illegal drop boxes (130,000 votes), no special voting deputies in nursing homes (many of which reported 100% voter turnout), 47,000 first-time "indefinitely confined" voters (no ID required), and $10 million in private dollars from Mark Zuckerberg, 85% of it used illegally for get-out-the-vote efforts in five

AP 'Fact Check': It's Not 'Grooming' to Sexualize Young Kids Away from Parents

By Neil Munro, April 15, 2022

Progressives are defending their in-school manipulation of kids' sexual development by smearing the worried parents as conspiracy theorists.

The smear helps progressives to keep the large bloc of non-political, non-confrontational parents from recognizing the long-term damage caused by the progressives' K-12 sexual re-education camps.

The switch-and-smear defense is spotlighted by an Associated Press fact check, posted April 13.

The AP article distorted the public's strong support for Florida's new law, which seeks to block teachers from pushing pro-transgender and other sexual claims on kids before the fourth grade.

Constitution Party of Wisconsin to Host Annual Event July 9th

The Constitution Party of Wisconsin (CPoW) will hold its convention at the DoubleTree hotel at 150 S. Nicolet Road in Appleton from 10 am to 7 pm. This year's theme of "Recapturing Our Liberties – Rising to Our Responsibilities" addresses everything from the voter fraud of 2020 to the increasing lack of accountability from our nation's so-called leaders.

Committed speakers so far will include –

Ron Heuer, Founder of the Wisconsin Voter Alliance https://wisconsinvoteralliance.com/ speaking on "Honesty & Elections."

Matthew Trewhella, Pastor of Mercy Seat Christian Church, head of Missionaries to the Preborn, author of "The Doctrine of the Lesser Magistrate: A Proper Response to Tyranny." https://defytyrants.com/

Robert DesJarlais, Township of Mishicot Supervisor, speaking on "Constitution & 2nd Amendment Sanctuaries."

Mark Gabriel, former Calumet County Supervisor, speaking on "Wisconsin Election Law Problems" and his experiences as a polling inspector in Appleton.

This event is open to the public and party membership is not required to attend; we always welcome fellow patriots to join us!

Breakfast, lunch and dinner meals are included in the registration fee of only $55 by June 30th. Walk-ins and those registering July 1 and after pay just $5 more. Let us know in advance of any dietary restriction you may have. Children 12 and under eat free (note the age of attendees on the registration form).

There are many ways to receive a copy of the convention schedule of events and a registration form. Download the forms at constitutionpartyofwisconsin.com. You can call us 608-561-7996, or e-mail us at chairman@constitutionpartyofwisconsin.com. We can also snail mail you convention forms. Regardless, your personal contact information will never be sold or shared to outside groups.

Hotel Reservations – DoubleTree is offering room discount rates of $103 + tax for any of the three days of July 7th through the 10th. Call the hotel at 920-735-9955 to book your room. This rate will be found under Group Name: Constitution Party of Wisconsin with Group Code: C-Con

"All convention attendees are encouraged to participate in our popular live auction," said CPoW Chairman Andrew Zuelke. "The convention is a great opportunity for guests to meet with party leaders from all over Wisconsin and learn more about our ballot-qualified alternative to the two, big-box, big-government Democrat and Republican Parties."

We hope to see you at the Convention as we work to regain our Constitutional Liberties!

Andrew Zuelke Signature Collecting for State Treasurer. Can you help us?

By Andrew Zuelke

Friends and fellow patriots,

I am running for State Treasurer. Can you help me with some signatures to get me on the ballot once again? Can you fill a sheet with the signatures of family, neighbors, friends? Can you mail me your own signature (to the address at the top of the sheet)? We have until June 1st and our efforts are well underway. You can call us to request signature sheets or download them at www.constitutionpartyofwisconsin.com/2022/04/28/help-us-get-andrew-zuelke-on-the-wi-ballot-for-state-treasurer/

"*In 2018, the people voted to defeat the constitutional proposal to eliminate this elected office. Now members of our state legislature are at it again. Rather than make this office stronger, add duties to it, and keep the office elected as I campaigned to do four years ago, our "leaders" in Madison now want to make this and other statewide offices appointed ones to consolidate power under their two-party control and give you less say in your state government. This is wrong! Help me get on the ballot to send our leaders one message - We the People want more choices on our ballots, not fewer!*"

Thank you for whatever you are able to do to help me secure ballot access under the name CONSTITUTION. Thank you for your support of life, liberty and property in Wisconsin and across America."

The Constitution Party of Wisconsin

America is **NOT** a democracy!

In 1787, when leaving the Constitution Convention, delegate Benjamin Franklin was asked by a Mrs. Powell, *"Well, Doctor, what have you given us, a republic or a monarchy?"* Without hesitation, Franklin answered, *"A republic, if you can keep it."*

When the Framers were having heated debates at Independence Hall about the wording of the amendments and what form of government they wanted, they chose a republic. The Framers knew what democracy was – that is why they did **NOT** want it. They loved the new nation they fought for too much to curse it with a democratic form of government. Here are some of their cautionary words –

Alexander Hamilton – *"...our real disease; which is democracy..."*

John Adams – *"Remember, democracy never lasts long. It soon wastes, exhausts and murders itself. There is never a democracy that did not commit suicide."*

James Madison – The Father of the Constitution, wrote in Federalist Paper No. 10 that pure democracies *"...have ever been spectacles of turbulence and contention; have ever been incompatible with personal security or the rights of property; and have in general been as short in their lives as they have been violent in their deaths."*

Climate Catastrophe

cont. from page 4

tornadoes."

"Wildfire season" started earlier than usual this year in the desert Southwest. Never ones to let a crisis go to waste, numerous media outlets blamed the early start of the fire season to human-caused climate change, warning it was a harbinger of worse things to come. For instance, on consecutive days in early May, Yahoo News published an article titled, "Climate change is why New Mexico's wildfire season started early this year," and Market Watch published one titled, "The Southwest is on fire—climate change is one reason why those wildfires are earlier and more intense." Both stories and others published recently imply climate change is causing earlier, more intense wildfires in the desert Southwest. Climate Realism responded with data showing these claims are untrue.

Data from New Mexico show this year's wildfires are hardly unique. From 1996 to 2013, New Mexico experienced 12 wildfires greater than 40 km2 during April in seven different years and nine wildfires started in March in three separate years. In addition, one of Arizona's largest wildfires in recent decades, the 1996 Lone Fire, began in April.

Data from U.S. National Interagency Fire Center show wildfires in the United States burn approximately 1/4th to 1/5th the amount of acreage annually they did in the 1930s. What is true of the United States is true for the world in general. For instance, a study published in the peerreviewed Journal of Geophysical Research analyzing global wildfires back to 1901 reported "a notable declining rate of burned area globally." In addition, NASA satellites have documented a global long-term decline in wildfires. NASA reports satellites have measured a 25 percent decrease in global acreage burned since 2003.

The scientist interviewed in the Market Watch story, Molly Hunter, associate research professor in environment and natural resources at the University of Arizona in Tucson, lists a number of reasons accounting for this year's early wildfire start, none of which have anything to do with climate change. Hunter says:

This year we also have a lot of fuel to burn. Last summer, in 2021, the Southwest had an exceptional monsoon season that left green hillsides and lots of vegetation. By now the grasses and forbs that established during the monsoon have dried out, leaving a lot of biomass that can carry a fire. Often in the Southwest, our biggest fire years come when we have a wet period followed by a dry period, like the La Niña conditions we're experiencing now.

Two additional factors cited by Hunter as contributing to Western wildfires in recent years are the spread of invasive grasses—like buffelgrass, red brome, and cheatgrass, which spread quickly and dry out early, providing large amounts of fuel for severe

Our Mission...

At the heart of CFACT, our goal is to enhance the fruitfulness of the earth and all of its inhabitants. CFACT accomplishes this through four main strategies:

Prospering Lives. CFACT works to help people find better ways to provide for food, water, energy and other essential human services.

Promoting Progress. CFACT advocates the use of safe, affordable technologies and the pursuit of economic policies that reduce pollution and waste, and maximize the use of resources.

Protecting the Earth. CFACT helps protect the earth through wise stewardship of the land and its wildlife.

Providing Education. CFACT educates various sectors of the public about important facts and practical solutions regarding environmental concerns.

Biden's 30x30 land grab must be stopped!

By Craig Rucker

I've written frequently about the danger inherent in the steady shift away from individual choice to government control of pretty much every aspect of our lives.

The Green-Left is making a big push to take away our property rights and the ability of people to safely use private and public lands no matter how environmentally responsible.

A week after he was sworn in, President Biden signed the "30x30" plan, which is designed to place 30% of our land and water under federal control by 2030. We posted details about an important conference I just attended on this subject to CFACT.org:

To push back against President Biden's 30×30 land preservation initiative, some 225 county executives, state legislators, farmers, and ranchers gathered in Lincoln, Nebraska to take part in a conference spearheaded by the American Stewards for Liberty.

The aim of the gathering, which took place from April 21-22 and was co-sponsored by CFACT, was to educate, network, and begin crafting a plan of action to resist what some are calling the largest attack on property rights in American history...

During my remarks at the conference, I noted that:

The origins of 30×30 didn't come from Biden, but are actually based on ideas that have been around for many years and can be traced back to misguided UN-related initiatives like the Wildlands Project, Agenda 21 and the Biodiversity Treaty.

I then went on to talk about how the Green Left has adopted a dangerous "conservation biology" perspective — one that shuns man's involvement in caring and stewarding for wilderness and instead champions a hands off, preservationist approach that leads to catastrophic wildfires, extinctions, and degradation of habitat. This is not wise land use.

I was joined on stage by property rights champions Nebraska Governor Pete Ricketts, North Dakota Senator Kevin Cramer, Colorado Representative Lauren Boebert, and Trump's Secretary of Interior David Bernhardt.

CFACT is heavily engaged in raising public awareness of this misguided 30x30 plan. 30x30 must be stopped and we intend to roll back the damage that has already been done.

Woke energy policies threaten world peace

By Craig Rucker

"Peace through strength" is an essential element of what we used to call the "Reagan Doctrine."

It hearkens back to Washington's admonition that "to be prepared for war is one of the most effectual ways of preserving peace."

Today woke "investors" are using energy policy to stand that wisdom on its head.

Managers of vast funds are meddling with energy policy for the worse under the mantras of "net zero" (emissions) and "ESG" (environmental, social and governance).

"Since Russia attacked Ukraine two months ago, Western governments have been learning the hard way about the critical importance of energy to their national security. Germany's 20-year, trillion-dollar 'Energiewende' (Energy Transformation) has made its economy totally dependent on supplies of Russian natural gas and paralyzed its response to Russian aggression..."

Yet in the face of Putin's naked aggression:

"The steering group of the Net-Zero Asset Owner Alliance, whose members manage over $10.4 trillion of assets, issued a statement urging Western governments not to sacrifice climate goals for energy security..."

Despite the war in Ukraine, there has been no let-up in investor pressure on oil and gas companies to scale down their operations.

The anti-energy crowd's mantras are music to the ears of the world's autocrats.

No one on the Green-Left seems able to answer the question: How exactly will shipping energy from tyrants like Putin, rather than producing it at home, lower the temperature of the Earth? By how much?

The more you study allegedly "Green" solutions, such as wind, solar, energy storage, carbon capture, and electric vehicles, the more you learn that they are simply not up to the task of powering our society. They are actively failing all over the world.

Mandating and subsidizing inefficiency will not work. The costs, scarce resources and environmental footprints of "Green" energy projects must not be ignored.

Magical thinking cannot power the future.

National security requires a robust energy economy if we want the free world to remain free.

Real Threats to biodiversity *cont. from page 1*

US Geological Survey wildlife biologist Sam Droege says wild bees are generally "doing fine." However, they definitely face challenges, primarily due to habitat loss, disease, and competition from managed honeybees and bumblebees – not to pesticides, since most wild bee species don't pollinate crops.

That brings us to one of Wokedom's favorite topics: intersectionality – in this case, actual connections among bees, climate change, habitat losses, and threats to our energy, living standards and freedoms.

Simply put, the gravest threat to wildlife habitats and biodiversity (and to people's rights, needs and living standards) is not climate change. It is policies and programs created, implemented and imposed in the name of preventing climate change.

Let's examine habitat and biodiversity threats – without asking whether any climate changes today or in the future are still primarily natural, or are now driven by fossil fuels. Let's just look at what purported solutions to the alleged "climate crisis" would likely do to the planet and creatures we love. In reality:

The most intensive land use – and thus greatest habitat destruction – is from programs

Continue reading on page 17

Everything CFACT warned about for years is coming true before our eyes

By Craig Rucker

Just as our economy is at its most vulnerable. Just when our military might is being challenged as it has never been since the cold war.

Now a feckless President has cast America's hard-won energy independence aside with both hands!

This cannot stand.

How will we achieve this? CFACT has launched a campaign which makes a simple, compelling demand which can be summed up in three simple words:

Energy Independence Now!

The action plan is simple. Here's some highlights:

1. National television blitz: Already begun! CFACT's Marc Morano has been burning down the airwaves on Fox, Newsmax, One America News, and much more.

2. Billboard campaign: CFACT will be paying for billboard signs in various parts of the country to showcase the destructive impacts of Biden's anti-energy agenda.

3. Op-ed and local radio blitz will take our campaign beyond television to radio and print media.

4. CFACT's one-of-a-kind Collegians campus outreach program will bring the "Energy Independence Now!" campaign to students to bust the left's plans to indoctrinate the next generation.

5. CFACT will use social media with a precision few can equal. Tens of millions have been engaged on Facebook. Twitter and more. Elon Musk's Twitter purchase of Twitter bodes well for online freedom.

The radicals who run Team Biden pushed America into needless energy peril based on exaggerated claims about the climate. They are also blatantly lying when they say they are not to blame for record high gas prices – something the White House deceptively calls the "Putin Price Hike?"

They know better. Energy prices were on the rise well before Putin's tanks rolled across his neighbor's border.

The real blame for America's self-inflicted energy crisis rests squarely on President Biden and the radicals who came to power with him

Biden canceled the Keystone XL Pipeline. This would have brought 800,000 barrels of oil PER DAY to the United States. At that time, the U.S. was importing 672,000 barrels per day from Russia. But Biden cut that off with no substitute in sight.

He then tapped the U.S. strategic petroleum reserve just when our national security needed it most. And now he's looking to replace Russian oil from unsavory places. Only an idiot would believe that purchasing energy from OPEC and Venezuela are preferable to producing it at home.

And to believe that doing this will somehow lower the Earth's temperature is pushing sheer nonsense.

Climate Catastrophe

cont. from page 14

wildfires—and the booming human population. Environments with invasive grasses are twice as likely to burn as acreage without them.

Tragically, increasingly the spark for wildfires is human action, through intentional arson or thoughtless negligence. "[S]tates are also seeing more fires caused by human activities, such as fireworks, sparks from vehicles or equipment, and power lines," Hunter told Market Watch. "More people are moving out into areas that are fire-prone, creating more opportunities for human-caused ignition."

The U.S. Forest Service estimates up to 85 percent of wildfires in recent decades were not started by lightning strikes or other natural factors, but by human ignition. In short, climate change is not among the various factors which have resulted in an early, but not unique, onset of the wildfire season.

Then, there is the granddaddy of all seasonal scares: "hurricane season." This season officially begins in June and runs through November. However, as is true with the other seasonal weather events or impacts discussed above, the occasional hurricane does form outside the official season.

Thankfully, no hurricanes have formed in the Atlantic or Pacific in 2022; but, as in past years, when one does, especially if it builds into a major hurricane and makes landfall, one can predict with some degree of confidence corporate media outlets will be all over it, linking it, and every other major landfalling tropical cyclone this year to climate change.

These claims will be false—as they were when alarmists made them in the past. Climate Realism has published more than 110 responses to government and mainstream media reports linking one hurricane or another to human fossil-fuel use. Data from the U.S. Environmental Protection Agency and the National Oceanic and Atmospheric Administration's National

Hurricane Center (NHC) show hurricanes have become neither more numerous nor more powerful during the past half-century of modest warming.

Continued on page 22

Total Failure: Britain's Grand 'Cheap' Wind Power Plan Faces Total Collapse

If wind power is so 'cheap', then why is it that retail power prices continue to rocket in every country attempting to run on breezes?

There are, as this site has pointed out over the last decade, myriad reasons, starting with the fact that wind power can only be delivered as and when Mother Nature feels obliged. Britain, as with much of Western Europe, was the victim of the Big Calm that struck in September last year and lasted for months.

Add in the exorbitant cost of using gas and diesel to generate power whenever calm weather sets in; the additional transmission and network costs of bringing power produced occasionally from remote locations; and the billions in subsidies paid to wind power generators all paid for by power consumers and/or taxpayers, and you're well on your way to an explanation as to why wind power is so punishingly expensive.

Andrew Montford helps unpack the 'cheap' wind power paradox, below.

Low-cost power pledge is blown away by the wily wind farmers

Conservative Woman

Andrew Montford, May 4, 2022

THE Government's strategy to deal with the energy price crisis has already failed.

Ministers promised that a new generation of 'low-cost' wind farms would get bills down, and there are indeed several gigawatts of offshore wind farms, either under construction, or newly completed, in the North Sea. These have all agreed to sell power to the grid at low fixed prices under the Government's Contracts for Difference (CfD) scheme.

But there's a problem. Since the start of the energy price crisis, newly-completed wind farms are delaying taking up their CfDs, probably because they can earn much higher prices on the open market.

Moray East, a huge wind farm off the Scottish coast, recently reached full operational capacity, but then announced that it was delaying taking up its CfD until 2023. As a result, consumers will potentially have to pay this one wind farm an extra half a billion pounds in its first 12 months of operations.

In fact, since energy prices soared last autumn, no new renewables capacity has been added to the CfD scheme; every renewables generator that was supposed to take up a contract in 2022 has now delayed until next year.

There is no suggestion that anyone is doing anything illegal. CfD contracts allow a great deal of flexibility on start dates, with delays of up to three years possible. The contracts are therefore extraordinarily generous to developers, with all of the risk taken by consumers and none by the wind farms themselves.

In terms of the Government's strategy to reduce electricity prices, there is a chicken and egg problem. Low-priced CfD wind farms are supposed to lower consumer prices, but no wind farm will take up its CfD with market prices so high.

When Darren Grimes broke the story on GB News yesterday afternoon, he poked fun at ministers and officials, whose feeble response was to plead for the industry to play fair with the public.

As Steve Baker MP put it, it amounted to an admission of another extraordinary regulatory failure. There are more to come.

Real Threats to biodiversity

cont. from page 15

most beloved, advocated and demanded by rabid greens: wind, solar, biofuel and battery energy, and organic farming.

Team Biden is still intent on getting 100% hydrocarbon-free electricity by 2035. It wants to eliminate fossil fuels throughout the US economy by 2050: no coal or natural gas for electricity generation; no gasoline or diesel for vehicles; no natural gas for manufacturing, heating, cooking or other needs.

America's electricity demand would soar from 2.7 billion megawatt-hours per year (the fossil fuel portion of total US electricity) to almost 7.5 billion MWh by 2050. Substantial additional generation would be required to constantly recharge backup batteries for windless, sunless periods. Corn-based ethanol demand would disappear, but biofuel crops would have to replace petrochemical feed stocks for paints, plastics, pharmaceuticals, cosmetics, cell phones, wind turbine blades and countless other products.

This is just for the USA. Extrapolate these demands to the rest of a fossil-fuel-free developed world ... to China and India ... and to poor countries determined to take their rightful places among Earth's healthy and prosperous people – and "clean, green" energy requirements become monumental, incomprehensible.

We're certainly looking at tens of thousands of offshore wind turbines, millions of onshore turbines, billions of photovoltaic solar panels, billions of vehicle and backup battery modules, and tens of thousands of miles of new transmission lines. Hundreds of millions of acres of US farmland, scenic areas and wildlife habitats would be affected – blanketed with enormous industrial facilities, biofuel operations and power lines.

Add in the enormous and unprecedented mining, processing and manufacturing required to make all these energy-inefficient technologies – mostly outside the United States – and the land use, habitat loss and toxic pollution would gravely threaten people, wildlife and planet.

Let's take a closer look, now just from a US perspective, but knowing these are global concerns.

Solar power. 72,000 high-tech sun-tracking solar panels at Nevada's sunny Nellis Air Force Base cover 140 acres but generate only 32,000 MWh per year. That's 33% of rated capacity; 0.0004% of 2050 US electricity needs. Low-tech stationary panels have far lower efficiency and generating capacity, especially in more northern latitudes. Meeting 2050 US electricity needs would require Nevada sunshine and nearly 235,000 Nellis systems on 33,000,000 acres (equal to Alabama).

Triple that acreage for low-tech stationary panels in less sunny areas. For reference, Dominion Energy alone is planning 490 square miles of panels (8 times Washington, DC) just in Virginia, just for Virginia. Then add all the transmission lines.

Wind power. 355 turbines at Indiana's Fowler Ridge industrial wind facility cover 50,000 acres (120 acres/turbine) and generate electricity just over 25% of the time. Even at just 50 acres per turbine, meeting 2050 US power needs would require 2 million 1.8-MW wind turbines, on 99,000,000 acres (equal to California), if they generate electricity 25% of the year.

But the more turbines (or solar panels) we need, the more we have to put them in sub-optimal areas, where they might work 15% of the year. The more we install, the more they reduce wind flow for the others. And some of the best US wind zones are along the Canada-to-Texas flyway for migrating birds – which would mean massive, unsustainable slaughter of cranes, raptors, other birds and bats.

Go offshore, and even President Biden's call for 30,000 MW of electricity (2,500 monster 12-MW turbines) wouldn't meet New York State's peak summertime electricity needs.

Biofuels and wood pellets. America already grows corn on an area larger than Iowa, to meet current ethanol quotas. Keep-fossil-fuels-in-the-ground lobbyists need to calculate how many acres of soybeans, canola and other biofuel crops would be needed to replace today's petrochemical feed stocks; how much water, fertilizer, labor and fuel would be needed to grow harvest and process them; and how much acreage would have to be taken from food production or converted from bee and wildlife habitat.

Climate activists also approve of cutting down thousands of acres of North American hardwood forests – nearly 300,000,000 trees per year – and turning them into wood pellets, which are hauled by truck and cargo ship to England's Drax Power Plant. There they are burned to generate electricity, so that the UK can "meet its renewable fuel targets." And that's just one "carbon-neutral" power plant. That's one year to slash and burn the fuel, and fifty years to regrow replacement trees. This is not green, sustainable energy.

Organic farming. Environmentalists dream of converting all US (and even all global) agriculture to 100% organic. However, that would further reduce wildlife habitats – dramatically – especially if we are to simultaneously eliminate world hunger ... and replace petrochemicals organically.

Organic farms require up to 30% more land to achieve the same yields as conventional agriculture, and most of the land needed to make that happen is now forests, wildflower fields and grasslands. Organic farmers (and consumers) also reject synthetic fertilizers, which means more land would have to be devoted to raising animals for their manure, unless human wastes are used. More lost wildlife habitat.

They reject modern chemical pesticides that prevent billions of tons of food from being eaten or ruined, but utilize toxic copper, sulfur and nicotine-based pesticides. They even reject biotechnology (genetic engineering) that creates crops that are blight-resistant, require less water, permit no-till farming, need fewer pesticide treatments, and bring much higher yields per acre. Translation: even less wildlife habitat

There are alternatives, of course. Government mandates and overseers could require that "average" American families live in 640-square-foot apartments, slash their energy use, ride only bicycles or public transportation, and fly only once every few years. They could also switch us to "no-obesity" diets.

Indeed, "scientists" are again saying we "common folks" could "reduce our carbon footprints" by eating less beef and chicken, and more insect protein, ground-up bugs – or roasted bumblebees. Or we could just reduce the number of "cancerous, parasitic" humans. (Perhaps beginning with wannabe overseers?)

Paul Driessen is senior policy advisor for the Committee For A Constructive Tomorrow (www.CFACT.org) and author of Eco-imperialism: Green Power-Black Death and many articles on the environment.

Far-Left Disasters

cont. from page 1

and retirement savings evaporate; they feel gas pump and credit card pain imposing increasingly severe lifestyle restrictions; they fear unchecked lawlessness expanding into their previously safe and quiet neighborhoods; and they detest witnessing innocent children being indoctrinated with racist, age-inappropriate, unpatriotic propaganda in public schools they support with their taxes.

Any notion that skyrocketing inflation — 8.3%, compared with 1.7% when Biden took office — can be blamed on Putin or COVID (nothing to do with crazy spending of course) isn't playing well with Americans. A March Rasmussen Reports national telephone and online survey found that 64% of likely U.S. voters believe Biden's policies are the main cause.

Economic recovery from pandemic shutdowns took a major blow thanks to the Democrats' $1.9 trillion March 2021 spending bill, and inflation was already at 7.9% when Putin invaded Ukraine.

Destructive Democrat energy policies add to the costs of virtually everything that must be grown, manufactured, and transported to American consumers.

It's not lost on honest economists and informed citizens that any strong economy depends upon ample, reliable supply-side sources of fuel and electricity.

President Biden inherited not only an energy-independent nation, but also one that was a net exporter.

Since then, diesel prices which filter through to food costs such as ships, trains, trucks, tractors, and other farm equipment, have increased by $2.40 a gallon in the last year, a buck more than gasoline.

These cost hikes are due in large part to increased freight demand in combination with reduced refining capacity.

Biden's war on fossil energy which provides about 80% of all U.S. electricity (a paltry 4% from wind and solar combined), contributed to raising power costs by 11.1% last year. This extra expense will hit this summer's California homeowners, who already pay 80% more per kilowatt-hour than the national average.

Perhaps recall that former presidential candidate Joe Biden famously promised to "shut down the virus" as a central campaign pledge.

Yet just as he had inherited an energy-independent America, upon taking up White House residency, his administration also benefited from having three Trump vaccines, several promising therapeutic treatments, and a large inventory of PPE supplies that the Obama administration had neglected to provide.

Nevertheless, according to "the best available global dataset on the pandemic," which is published and updated by John Hopkins University and relied on by Google and the New York Times, more Americans have died from COVID-19 since Biden took office than during the final year of Donald Trump's presidency.

Meanwhile, as the Biden administration appeals a Texas federal court decision against its mandate requiring federal workers and U.S. service personnel, and employees of large corporations to be vaccinated, it gifts free passes to millions of unvaxed and unvetted migrants who are crashing through our nation's southern border enroute to a neighborhood near you.

This, after all, is the same administration that halted construction of the wall; attempted to rescind the Migrant Protection Protocols (MPP), better known as the "Remain in Mexico" policy, which is now before the U.S. Supreme Court; and declared that most illegal aliens are exempt from arrest and deportation.

Border Patrol agents encountered more than 220,000 migrants at the border in April, the highest number reported since 2000. More than 1 million encounters have already been reported so far this year, while 1.7 million were reported in the entire year of 2021.

That current open border catastrophe will become far worse if and when the administration terminates a Trump-era Title 42 program that allows patrol officials to turn away migrants premised on its obviously contradictory claim that a COVID health crisis is no longer in effect.

Illegal migrants aren't all that are coming across the border to your community. There's also lawless sex and narcotics trafficking … lots of it.

U.S. Customs and Border Protection (CBP) in South Texas reported a 1,066% 2021 fiscal year increase in fentanyl seizures, a deadly drug which, along with other synthetic opioids, led to more than 71,000 American deaths last year.

CBP also reported a 23% increase in deaths involving cocaine, and a 34% increase in mortalities involving meth and other stimulants.

Other soft-on-crime policies, including police defunding and permissive prosecutors, are taking terrible tolls on predominately Democrat-controlled cities.

Six notable examples where data is readily available for rising homicide rates include Chicago, Baltimore, Milwaukee, Pittsburgh, Los Angeles, and Indianapolis.

In addition to the fact that the victims in each of these Democrat-controlled cities were disproportionately Black, all but two have cut police budgets through defunding movements following widespread Black Lives Matter 2020 "Summer of Rage" protests and riots in 140 cities following the murder of George Floyd. These rampages caused at least $1 billion to $2 billion of property damage and dozens killed.

Few rioters were arrested or prosecuted, and Kamala Harris even set up a free bail fund.

Whereas peaceful protest is legal in America, doxing, gathering, and intimidating judges at their homes is clearly not.

Nevertheless, the Biden White House has been conspicuously silent about such threatening actions against Supreme Court Justices Brett Kavanaugh, Samuel Alito, Amy Coney Barrett, and John Roberts over an expected decision to strike down Roe v. Wade.

It was quite a different story when Biden Attorney General Merrick Garland sicced the FBI on investigating parents at Virginia school board meetings as potential domestic terrorists over protests that K-12 children were being taught divisive critical race theory, false revisionist 1619 Project history, and age-inappropriate sexual

Everything Wrong with COVID "Science"

cont. from page 1

Did masks prevent COVID? Could you get it from touching things an infected person had touched? Why did some people get extremely sick while others weren't impacted? What are the best ways to treat people with COVID? Was it safe for people to congregate outside? Could masks shut down COVID? Why did some people get long-term COVID while others didn't? Was the virus man-made or naturally occurring? What was the best way to keep the population safe while minimally disrupting our society?

Two years out from the virus, we STILL don't have the answers to many of those questions and that shouldn't surprise anyone. Science is often a laborious and messy process that can take years of competing experiments to produce answers to the questions it sets out to answer – if it ever does. For example, what could be more basic than the food we eat? Yet, there is no definitive answer on what foods we should eat to be healthy. Certainly, there are some strong indications about what foods we SHOULDN'T eat (seed oils, sugar, highly processed foods, and fried foods), but should you go vegetarian? Vegan? Carnivore? Paleo? Proponents of all those foods can make excellent arguments, backed by scientific studies, that their way of eating is the best. Even though it's an extremely important question, it's impossible to say with certainty at this point.

Scientists studying COVID were faced with that same dilemma. People were DYING and looking to them for answers that they simply didn't have. So, in many cases, they took their best guesses. That's not an unreasonable way to approach the situation as long as everyone is being honest about what's happening.

In other words, it's perfectly fine to say, "We're consulting with some of the best people in the field and we can tell you that based on the limited research we have, this is what we think the best way to go seems to be. That being said, it may change in the future as we get better data."

The problem with taking that approach is that people, especially when it comes to their health, prefer to hear definite answers. That goes double when you're talking about something they may be reluctant to do, like take a brand-new vaccine, wear masks that they find annoying, or shut down their businesses.

So, what happened with COVID when the scientists wanted to steer the public towards what their "best guesses" were about how to handle the pandemic? They made claims they couldn't back up and called it "science." Then, they encouraged censorship of people who pointed out their lies. They waived off all doubt and proclaimed that questioning their views, many of which were politically motivated, was the same as questioning science itself. What was it that Anthony Fauci said when he was criticized?

"A lot of what you're seeing as attacks on me quite frankly are attacks on science."

That was the attitude from the get-go. As if questioning the conclusions and tactics used to fight COVID was the equivalent of questioning whether gravity existed or whether the Earth was round. It was a mixture of science AND political activism. Also, as you'd expect, it was often wrong. Actually, masking the general public didn't stop COVID. COVID doesn't appear to spread very well by touch. We aren't seeing very much transmission of COVID outdoors. The vaccines did save a lot of lives, but no, they weren't anywhere near as effective at stopping people from getting the virus as advertised. Lockdowns were a disastrously bad idea. At this point, it's also abundantly clear that firing people for not being vaccinated makes no rational sense. For that matter, vaccinating healthy children clearly makes no sense, but we're doing it anyway.

Now, if all of this had been done THE RIGHT WAY, with genuine open debate, SOME of the same mistakes would have been made. However, we also would have avoided a lot of mistakes. Would we have had lockdowns? Maybe, but if so, we can be sure the lockdowns wouldn't have lasted as long in some parts of the country. There's absolutely no chance we would have been demanding that people be fired for not taking a vaccine that doesn't prevent people from getting COVID. Additionally, things like masking and vaccinating healthy children seem to be almost completely politically driven. It's hard to imagine a free and open scientific debate leading to healthy children being vaccinated. On top of all this, the public wouldn't have lost faith in what they hear from so many "scientists."

Science is still respected by the public, but there's now an element of doubt about scientists telling the public the truth that really wasn't present before. Overall, that will hurt our society and science itself in the long run, but it is at least likely to have the advantage of opening many people's eyes to the extraordinarily sketchy "science" involved in global warming.

First of all, keep in mind that we think the earth is 4.5 BILLION – yes, with a "b" – years old. Additionally, our best guess is that humans evolved 200,000 to 300,000 years ago. Out of all that time, do you know long we've had actual global temperature readings we can look back at? Only 142 years:

People have been measuring temperature since Galileo's time, and the modern thermometer was invented in the early 1700s. Formal weather stations, which before the mid-1800s were mostly in Europe and the US, became ubiquitous enough by 1880 to provide a robust picture of global temperature. But the vast majority of other, older climate data still isn't digitized.

When people say things like, "This is the hottest year on record," they mean since 1880. Additionally, there are certainly reasonable questions that can be asked about how accurate that data is over time. Things like cities, factories, and roads can drive up the temperature in an area. Is it really getting hotter in some of these areas, or did they go from an isolated region to a populated one?

Of course, scientists do have different ways of measuring temperature further back than 1880 but calling them "questionable" would be a compliment:

Some common examples of climate proxies are rocks, ice cores, tree rings, fossils, lake, and sea sediments etc. They act as "natural climatic archives" as they contain imprints of the ambient temperature conditions on them.

We can speculate that these methods might be accurate, but of course, until someone invents a time machine, there's no way to go back in time and figure out if they're right or not. In other words, much of our data before 1880 is little more than ultimately unverifiable educated guesses.

On top of all that, just as we've seen with COVID, this issue has been heavily politicized and the scientific debate around it has been stifled. The amount of money that's pouring into the field, not for an open scientific debate, but to promote the pro-manmade global warming point of view, is so huge it's almost beyond belief:

According to a recent report by the U.S. Government Accountability Office, "Federal funding for climate change research, technology, international assistance, and adaptation has increased from $2.4 billion in 1993 to $11.6 billion in 2014, with an additional $26.1 billion for climate change programs and activities provided by the American Recovery and Reinvestment Act in 2009."

...How big is the Climate Change Industrial Complex today? Surprisingly, no one seems to be keeping track of all the channels of funding. A few years ago, Forbes magazine went through the federal budget and estimated about $150 billion in spending on climate change and green energy subsidies during President Obama's first term.

...Worldwide the numbers are gargantuan. Five years ago, a leftist group called the Climate Policy Initiative issued a study which found that "Global investment in climate change" reached $359 billion that year.

The whole global warming industry is a gravy train – as long as you say what the people doling out the money want to hear. If scientists that worked for the tobacco industry told you that smoking cigarettes is the healthiest thing you can do, no one in their right mind would take that at face value. Despite protests you may hear to the contrary, this is no different.

It's also well worth noting that the United States is not even the world's leading producer of greenhouse gases. Per the EPA:

What this means is that even if we went down the crazy Left's entire wish list on this issue and banned gasoline-powered engines, ended domestic air flights, and got rid of those awful farting cows, it ultimately wouldn't fix any kind of global problem. In other words, even if global warming were real, caused by man, and was guaranteed to lead to disaster, the only realistic potential solution would be geoengineering projects. Here's one recent example of a potential technique that's being studied:

"Geoengineering is a blanket term for technologies that try to alter Earth's physical qualities on the largest scale possible," Popular Mechanics reported. "One example is cloud seeding, where airplanes flush clouds with particulate matter in order to coalesce into rain."

Solar geoengineering involves using technology to try to reflect solar radiation back into space before it can interact with greenhouse gases. The most commonly proposed method is to use aerosols — "the gaseous clouds formed by particles of many common materials" — because the physical structure of their particles blocks and scatters light, according to Popular Mechanics.

But solar geoengineering is controversial, even according to the Harvard researchers who proposed the experiment. For one thing, the methods could have unintended consequences on global weather patterns.

Put another way, we have a fairly primitive understanding of our climate and we're terrified we might cause some kind of cataclysm by messing around with the climate on a global scale. That's a wise approach to take given our current knowledge level. We can't tell you definitively if it will rain tomorrow. We can't predict exactly where a hurricane is going. We certainly don't know enough to try to change the world climate and while we're at it, anyone who's honest would admit that there's not a living soul on this planet who has any idea what the global climate is going to look like in 100 years.

With COVID, we got to see this kind of bogus science fail in real-time, but with global warming, we just get to see new predictions of doom fail every few years. Rather than hitting us with more PR campaigns featuring sad polar bears, maybe they should try getting back to real science. Start funding the skeptics. Open up scientific debate. Take politics out of the equation and allow people to go where their research leads them, not to predetermined answers. That's what people who care about science would do. On the other hand, if it's really all about "science" masquerading as a political agenda, nothing needs to change at all.

U. of Texas researcher warned Wuhan lab of inquiries by Congress, 'alternate' media'

By WorldTribune Staff, May 9, 2022

Who should be held responsible for the Covid pandemic, called the "China virus" by former President Donald Trump, which has killed millions and devastated economies and livelihoods worldwide?

A researcher at the University of Texas rushed to warn Chinese scientists at the Wuhan Institute of Virology that U.S. Congress members and "alternate" media were pushing for investigations into the possibility that Covid-19 leaked from the Wuhan lab, documents obtained by Judicial Watch show.

The records were obtained in response to Judicial Watch's Jan. 20, 2020, Texas Public Information Act (PIA) request to the University of Texas Medical Branch.

The records include an email dated April 16, 2020, with the subject line "Rubio" from former Commander of the U.S. Army Medical Research Institute of Infectious Diseases David Franz who informs Le Duc, "I heard from someone in government this evening that Senator Rubio is starting to push for an investigation regarding Wuhan lab. Just found it on the web at Forbes by Kenneth Repoza. Title of article is 'eight senators call for investigation into coronavirus origins.'

Le Duc then forwards the email to Dr. Shi Zhengli, a top Chinese virologist known for her work with coronavirus at the Wuhan Institute of Virology, requesting a phone conversation "soon" about the email.

Despite disastrous results, Team Biden still pays hospitals to use remdesivir as primary Covid treatment

By WorldTribune Staff, May 15, 2022

The Biden administration is paying hospitals to use remdesivir as the primary treatment for Covid despite the drug being highly ineffective against the virus and routinely causing severe adverse reactions, a top physician noted.

"Despite its horrible track record, the U.S. government actually pays hospitals a 20% upcharge for sticking to the remdesivir protocol, plus an additional bonus. Hospitals must also use remdesivir if they want liability protection," Dr. Joseph Mercola wrote for The Defender on May 12.

"Incentives like these have turned U.S. hospitals into veritable death traps, as more effective and far safer drugs are not allowed, and hospitals are essentially forced to follow the recommendations of the U.S. Centers for Disease Control and Prevention," Mercola wrote.

Remdesivir is also an extremely expensive drug, costing between $2,340 and $3,120 depending on your insurance.

Ivermectin, meanwhile, which has been very effective against Covid and shown to outperform other drugs, costs between $48 and $94 for 20 pills depending on your location. The average cost is said to be about $58 per treatment.

In late April, the FDA approved remdesivir as the first and only Covid treatment for children under 12, including babies as young as 28 days. The drug is also approved for outpatient use in children.

It has been known for more than year that remdesivir is not an effective Covid treatment. The World Health Organization (WHO) in November 2020 advised against using it for Covid patients.

"Curiously, while Big Tech — aided and abetted by the U.S. government — has spent the last two years censoring and banning any information that doesn't jibe with the opinions of the WHO, the U.S. government has completely ignored the WHO's recommendation against remdesivir," Mercola noted.

Forbes science reporter JV Chamary noted in a January 2021 article titled "The Strange Story of Remdesivir, a COVID Drug That Doesn't Work":

"The drug proved ineffective against the Ebola virus … yet was still subsequently repurposed for SARS-CoV-2 coronavirus. News media prematurely reported that patients were responding to treatment. But the published data later showed that 'remdesivir was not associated with statistically significant clinical benefits [and] the numerical reduction in time to clinical improvement in those treated earlier requires confirmation in larger studies.' "

In an April 30 blog post, Dr. Meryl Nass raised concern about the FDA's approval of remdesivir for outpatient use in babies, stating: "Remdesivir received an early EUA (May 1, 2020) and then a very early license (October 22, 2020) despite a paucity of evidence that it actually was helpful in the hospital setting. A variety of problems can arise in its secondary use, including liver inflammation, renal insufficiency and renal failure."

In fact, Mercola noted, all Covid treatment drugs recommended by U.S. health authorities and pushed by their allies in Big Media "have been disastrous in one way or another."

Paxlovid "will in some cases cause the infection to rebound when the medication is withdrawn," Mercola wrote. "Molnupiravir (sold under the brand name Lagevrio) also has serious safety concerns. Not only

What's next now that the global COVID jab narrative appears to be losing steam?

(Meryl Nass) – There has been so much bad news about the vaccines in the last few months, it even leaked into the mainstream media. I think the cabal's plan, at least in the US but probably everywhere, is to stop propping the ludicrous vaccine claims up and allow them to die a natural death. I explain why below.

There was just too much bad news, too few getting boosted, too much resistance from parents. Getting 8 or 10 doses into everyone was not going to happen. The terrified obedient masses were becoming fewer and fewer.

For example, here is one story that got lots of traction: ABC News covered the fact that "At least 72 COVID cases in the fully vaccinated resulted from the Gridiron dinner." Not only did Nancy Pelosi test positive, but several members of Biden's Cabinet and many other Beltway glitterati did too. All of whom had to have been vaccinated in order to attend.

There was plenty of happy talk that the afflicted politicians in DC had only mild COVID cases. Good for them. But, if vaccinations caused them to become asymptomatic spreaders instead of spreaders with symptoms, who would know to stay home while sick, the vaccines could actually be doing more harm than good in terms of transmission. They could be causing more COVID cases, not less.

By now, it has to be apparent to everyone who walks by a newsstand or turns on the TV that the media are begging much too hard for more shots.

It must be obvious to all that the shots do not prevent spread and therefore there is no logical way you can mandate them. Because if my shot does not protect you (and only with lots of fairy dust will it protect me) why would you have any interest in whether or not I am vaccinated?

Once you stop caring about my vaccination status, the cabal's nexus of control starts to fall apart. That was their ace in the hole. Time for them to move on to something else.

The kicker for childhood vaccines: the New York state Department of Health study of vaccine efficacy in children. After 2 months, efficacy in the 5-11 year olds had fallen to 12%, meaning that in other words, 7 out of 8 vaccinated kids derived no benefit after 2 months, only risk. The data were derived from 365,000 children, and apparently there was no way the CDC could spin such data: or only 12% was the best spin they could put on the data. This report is a huge obstacle to universal child vaccinations. The cabal cannot surmount it.

It is important to mention again – because we keep forgetting – that while the vaccines are nominally licensed for adults, in fact you can only find the EUA (unlicensed) product in the US, and legally an EUA is experimental, and therefore forcing someone to be vaccinated is a Nuremberg violation and a violation of federal law.

The imposition of mandates for these experimental gene therapy products is therefore a crime, being committed by states, federal government and certain companies and other institutions. It seems that because US law was not designed for situations in which the government is the criminal, it has been very difficult to use the judicial system to change what is happening.

But surely if this persisted much longer an honest judge somewhere would finally rule that the vaccines are experimental and the COVID mandate house of cards would then collapse. Like Humpty Dumpty (it is Easter after all):

All the king's horses and all the king's men

Couldn't put COVID mandates together again

What else has been happening that undermines the vaccine story? Well, in addition to all the collapsing athletes, there is now a large collection of mayors suddenly dropping dead throughout Germany.

In Australia, Queensland's health minister just admitted that ambulances are being summoned for a lot more calls for cardiac events and sudden deaths: 40% more to be exact. Thanks to Igor Chudov for following this story, and including a video of the clueless minister admitting it, but having no idea why…

Then there were the 3 insurance companies, one each from the US, India and Germany, that admitted there were about 40% more deaths than expected in working-age people in the second half of 2021. The German official who blew the whistle was immediately fired, which is a strong indication he was telling the truth.

Three doctor whistle-blowers released a large cache of data from the military's DMED

African Catholic priest found guilty of selling body parts of murdered man

BLANTYRE, Malawi *(LifeSiteNews)* – A Catholic priest is among 12 suspects found guilty over the murder of a 22-year-old man with albinism in Malawi.

Malawi24 reported that Fr. Thomas Muhosha was among seven suspects who were found guilty for the March 2018 abduction and murder of a 22-year-old man, MacDonald Masambuka, with albinism.

On April 28, 2022, in Malawi's Blantyre High Court, Judge Dorothy Nyakaunda Kamanga declared that the 12 suspects intended to kill Masambuka before extracting his bones, with the aim of selling them for profit.

The sale of body parts from people with albinism is a lucrative part of the black market, as such body parts are believed to bring good luck. The body parts are also used in rituals pertaining to witchcraft and black magic.

Judge Kamaga noted that Masambuka "is the latest victim of violent attacks on persons with albinism who have not been protected by the community."

"This is a violation of the right to human life and the greatest violation of the rights to life and integrity for persons with albinism," she said.

Fr. Muhosha was one of seven suspects found to be guilty of selling Masambuka's body parts, while the other five suspects were found guilty of actually committing the murder, including Masambuka's brother – Cassim White Masambuka.

Masambuka was last seen on March 9, 2018, when he went to meet his brother who had reportedly found a girl for Masambuka to marry. According to court documents, upon arrival at the scene, Masambuka was seized by his friends, murdered, his body burned with petrol, and then buried.

His corpse was later found April 2, 2018.

Fr. Muhosha, of the Catholic diocese of Zomba, was suspended by Bishop George Desmond Tambala on April 17, 2018, after the diocese learned of the "allegations" made against Muhosha regarding Masambuka's murder.

Bishop Desmond wrote of the diocese's "profound shock and shame" over the accusations against Muhosha, saying that the diocese "has always strongly condemned the killing of our brothers and sisters with albinism."

Muhosha was formally suspended from the priesthood while the diocese awaited the outcome of the civil trial, but with the promise of a canonical trial following completion of the civil trial. "Upon the conclusion of the matter by a competent court of law, due Church processes will follow according to the prescriptions of Canon Law," wrote Bishop Desmond in 2018.

The 12 guilty suspects will now be sentenced on May 31.

Biden Announces Food Shortages *cont. from page 1*

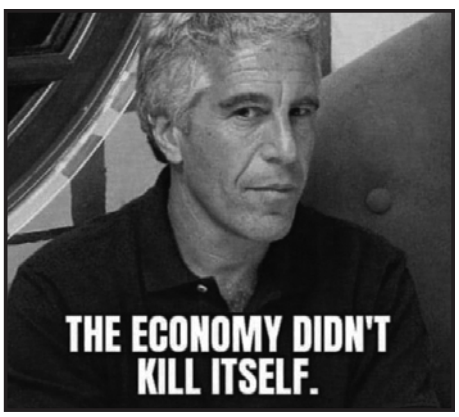
processing plant in Indiana was reduced to ash.

Still Think It's Coincidence?

Add to the above, a meat processing plant in Lackawana County, PA; the family-owned Cobb Country Meats in Cobb County, GA; the JBS Nebraska Plant of Meat Importers of America; Azure Standard Headquarters facility, the nation's premier distributor of organic healthy foods, back in Darfur, OR; a Tyson-owned feed ingredients plant; a Tyson poultry plant in KY; a Hot Pockets plant in Jonesboro, AR; Wisconsin River Meats, Mauston, WI; Deli Star Meats, Fayetteville, IL; a Smithfield peanut plant, Richmond, VA; an Oregon potato chip factory; McCrum Potato Processing plant, OR; Aynor Conway Meat Center in Conway, SC; the rice dryer at a Kellogg plant in Memphis TN (ok, this was all the way last summer in July, 2021; and at the Cargill-Nutrena Feed Mill, Lecompte, LA. This is NOT coincidental! This destruction of our food supplies is intentional and is war against the people. There can be no other explanation.

No Bombers Required

For all of the Junta's efforts to blame everything they have messed up on Russia, they are failing miserably. Not a single foreign enemy or Russian bomber has been found to be a part of any of this. Sarc…as they say. The overt destruction of America is underway, and our food supply is the primary weapon of the enemy, our own government. No bombers required.



Stay alert, America. We are at war with our own government, and it was declared by them. If you work at a food or fertilizer facility, be suspicious. Keep your eyes and ears open, and stay safe. If you are working to secure our November election, work twice as hard. Gather groups who will have 24/7 eyes-on at the ballot drop boxes around the country. The election – IF we should get there – will be our last chance to save our Republic and ourselves. This will be the finest and best local action we can render.

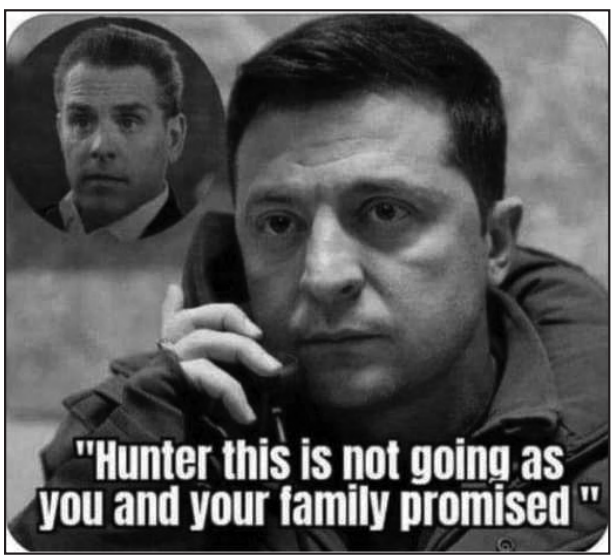
Abortions: 63 Million in 49 Years *cont. from page 11*

been stolen by a clerk to one of the justices and given to Politico, a media company, had been written by Justice Samuel Alito, a conservative member of the court.

The contention among justices is that the draft was misappropriated by a person or persons with access to the the guarded halls of the court and the judges' chambers. Each of the nine Supreme Court justices have four clerks, and some secretaries, and typists. The job of clerk to a Supreme Court justice is a coveted one and their access to draft opinions and conversations is acceptable and trusted.

Chief Justice John Roberts has ordered an investigation with directions that the person or party responsible for the theft of the draft opinion be identified and punished as appropriate. Roberts described the purloining of the draft opinion as an "egregious betrayal of trust." It is the first time for such a betrayal in 250 years, the chief justice said.



The 1973 opinion in Roe v. Wade was written by the late Justice Harry Blackmun, and adopted in a 7 to 2 vote. Dissenting were Chief Justice William Rehnquist and Associate Justice Byron White.

The Roe court recognized that the word "abortion" is not mentioned in the constitution, but found that it was an issue which could be addressed by a woman who possessed a "right to choose." The "right to choose" was said to be implicit in the right of privacy which all citizens possess, and while not specifically stated, is contained in the first 10 amendments. One legal professor has said that the court saw the privacy right as existing in the "arching penumbra" of the Bill of Rights which grants basic rights to all Americans.

In other cases which followed Roe, the rights allowing for an abortion were said to exist pursuant to the word "liberty" in the 14th amendment. In his draft, Justice Alito also analyzed and dismissed the "liberty" argument as a reason to allow abortions under the U.S Constitution.

Reportedly, radical abortion supporters are going to the private homes of the justices on the court who they presume will endorse the draft from Justice Alito. Their conduct is grossly improper and a violation of law, and police will be on hand to arrest participants breaking the law.

Justice Roberts also has emphasized that the draft opinion is not the opinion of the court. The final decision and the final opinion is expected to be announced in late June or July. He said also that the commotion which has occurred will not interfere or influence the court's analysis and final opinion.

CNN Promotes Neo-Nazi Ukrainian Commander

By Darian Alexander, March 23, 2022

Has Nazism suddenly come to fashion? The infamous media outlet CNN, a group of activists who are known for verifiably pushing fake news on numerous occasions, recently promoted a neo-Nazi Ukrainian commander in a recent bit.

The commander in question is Azov Major Denis Prokopenko, who hails from a gang called the Azov Battalion, which Wikipedia currently describes as a "right-wing extremist, neo-Nazi, formerly paramilitary unit of the National Guard of Ukraine." Wikipedia also acknowledges that these neo-Nazis are not only promoted by but actively work for the Ukrainian government; they state that Azov Battalion was incorporated into the country's National Guard in November of 2014.

CNN simply described the neo-Nazi commander as a "Ukrainian military commander who has been defending the city from the siege."

This was not the only time the fake news outlet seemingly overlooked Prokopenko's Neo-Nazi origin. A March 19 CNN report titled "Mariupol residents are being forced to go to Russia, city council says" quoted him simply as "Major Denis Prokopenko, from the National Guard Azov Regiment," — no further details were given.

Catholics launch group to uphold faith after school board votes to fly LGBT flag, teach CRT

HANOVER, Ontario *(LifeSiteNews)* — Catholics in Ontario formed an action group to defend the faith in Bruce-Grey Catholic Schools after board trustees voted in favor of flying the gay "pride" flag and teaching a Critical Race Theory-style curriculum.

"In March 2022, Bruce Grey Catholic District Board passed an 'Equity Action Plan' which promotes gender ideology and Critical Race Theory, and orders the Pride Flag to be flown at ALL Catholic schools in June 2022. All of this runs contrary to Catholic moral teaching," the newly formed Take Back Catholic Education group states on its website.

"Our Catholic schools are becoming centres of indoctrination," the group laments. "We have to stop it."

The group's website features a petition Catholics and concerned parents can sign to urge the trustees to ensure the board "retain its Catholic identity and faithfulness to Christ's teachings, and as such, ban the flying and/or display of the PRIDE Flag — or any other political flag — inside or outside any Catholic school, or the Catholic Education Centre in BGCDSB."

One of the "Core Team members" of Take Back Catholic Ed told LifeSiteNews that "although the Catholic school system has accomplished many good works, it now aligns itself too closely with cultural, social and government movements that undermine the teachings of the Church and the authority of the family."

"Our goal is to take back Catholic education from the influences that are diminishing our Catholic values, thwarting Divine truth, and darkening the future of our children," continued the core member, adding that all but one trustee, Robyn Garvey, voted in favor of the policies.

The member also explained that before launching the group, they had privately "offered fraternal correction" and will "continue" to do so, but action needed to be taken as their pleas for upholding the faith have been consistently ignored.

While the board's decision to fly the rainbow flag was done in the name of so-called inclusion and "equity," the flag itself symbolizes support for lifestyles in direct contradiction to perennial Catholic teaching that one must hold to remain in union with the Catholic Church.

Fr. Wojciech Kuzma, a local pastor of St. Mary of the Assumption in Owen Sound, voiced his opposition to the board's new directive, reminding the board in a recent parish bulletin that the pride flag promotes "ideals that are in direct opposition to the Catholic Church's teachings," and he cannot "in good conscience" support the move.

Other pro-family Catholic groups have also voiced their opposition to the measures, urging local Catholics to be cognizant of what is occurring in their local schools and to take action.

"With this aggressively anti-Christian ideology flooding our separate schools, it's hard to justify continuing to call them 'Catholic,'" Jack Fonseca, political operations director of Campaign Life Coalition, told LifeSiteNews via email.

"Aside from the superficial religious label, this heretical board has essentially voted to wage war against Catholicism, and is making itself indistinguishable from the already anti-Christian public school system," Fonseca added.

While the infiltration of the LGBT agenda is nothing new, the implementation of Critical Race Theory has become a particularly prominent issue in the Catholic school system in recent times.

Speaking on CRT, Fonseca explained to LifeSiteNews that the school of thought "is a modern-day version of the class warfare strategy developed by Karl Marx, the father of communism — an ideology responsible for the mass murder of up to 186 million people throughout history."

"In the original outbreak of Marxism, the socialists or communists seized control of society by exploiting existing tensions between rich & poor to divide and create conflict in society, painting one side as oppressed (the poor) and the other as oppressor (the rich), and then calling for violent revolution to overthrow the oppressor, with the Marxists supposedly bringing liberation, but ultimately becoming brutal, absolute dictators once in power," Fonseca explained.

"Likewise, in modern day Critical Race Theory, existing or even invented racial tensions are exploited to paint one race as oppressor … and others as oppressed … and to call for various forms of discrimination, degradation and vilification against the oppressor class, in the name of 'social justice' or 'anti-racism,'" he added.

Fonseca mentioned how this type of "class warfare," which classifies "descendants of white Europeans" as the "oppressor" while painting all other groups as "oppressed," is "irrefutably anti-Catholic," having been condemned by multiple popes, including modern popes Leo XIII and John Paul II.

"In the upcoming municipal elections, faithful Catholics in the Bruce-Grey Catholic Board must take back our schools from the spiritual destroyers who voted to pass this evil motion. We are encouraging Catholic rate payers and stakeholders to step forward as candidates and run against these unfaithful stewards. We especially encourage healthy, retired or semi-retired Catholics to consider running for trustee, since busy parents with children often find it overwhelming to consider taking this on, even if they have the desire," Fonseca urged.

The Core Member of Take Back Catholic Ed told LifeSiteNews that they "encourage people to sign our petition, and learn more, at https://takebackcatholiced.ca/petition," while emphasizing the importance of "respectful dialogue."

"Our primary concern is for the souls of our children and the success of our families."

One Nation Under God

Psychologist: Parents were 'sold a lie' by trans lobby: Many teen patients in crisis

By WorldTribune Staff, May 8, 2022

A psychologist with 16 years of experience in the mental health of children said that parents have been "sold a lie" by the trans lobby and supporters that allowing their children to live at a young age as the opposite gender did not pose a psychological risk.

The trans lobby has convinced people not to worry about "socially transitioning" for young children because it was reversible," the Daily Mail quoted the psychologist as saying. The Daily Mail agreed to the psychologist's request for anonymity out of fear of being canceled as a "transphobe."

The psychologist, however, argues that children whose gender change was affirmed by the adults around them commonly find themselves in an "impossible situation" when they reach puberty.

"Social transition isn't reversible because what we tell our children for years can't be reversed," the psychologist said.

Never before has she seen so many young patients identifying as trans, the doctor said. Those now coming to see her with anxiety or suicidal thoughts had been allowed to transition from one gender to another at an earl age, sometimes even at five or six.

In an article posted online, the psychologist said parents rarely associated the psychological problems that were devastating their children's lives with their change of gender.

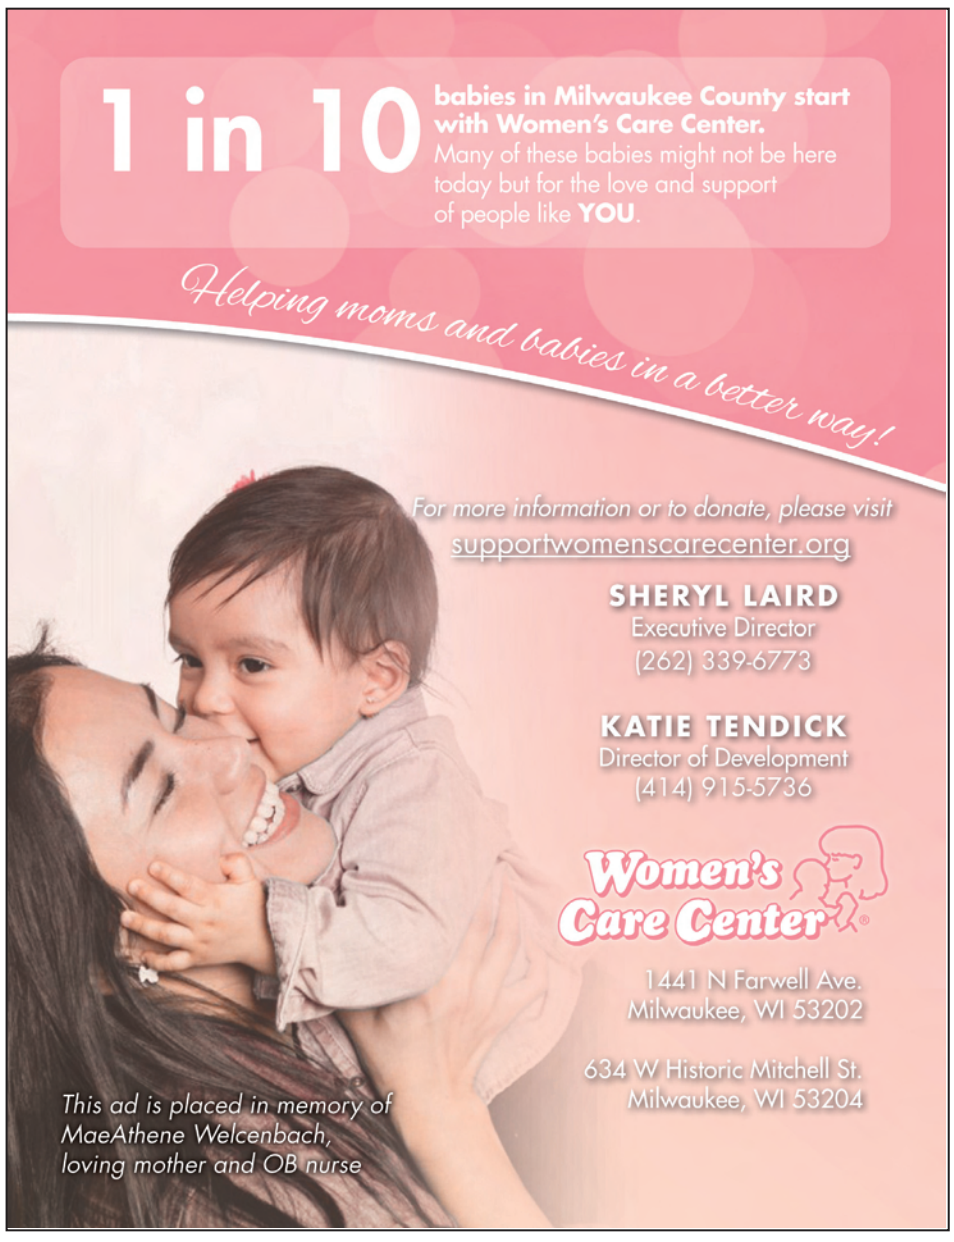
"The parent would be telling me about their teenager, about their mental anguish, suicidal thoughts and self harm, and then they'd drop something in, so casually that I'd almost think I'd missed it, 'Oh, and he's a transboy (or girl), transitioned when he (or she) was five (or six or seven), but that's all fine,' " the psychologist wrote.

"When we disconnect them from their biological sex we set up patterns of denial and secrets. We set them up to hate their bodies at puberty, to beg for [puberty] blockers and binders, because for years we told them they could change sex and they believed us – but their body knows otherwise," the psychologist wrote.

"They become desperate to go back to the years when no one knew any different, but that time will never come again. Time is not reversible. What we grow up being told in our childhood matters for our whole lives."

The Daily Mail reported last month that one in every 15 pupils at a leading UK secondary school identifies as transgender or non-binary.

The majority have identified as transgender since most Covid-19 lockdown restrictions were lifted last summer, raising concern about the impact of online trans "influencers" on youngsters who were largely confined to their homes for months.



Climate Catastrophe

cont. from page 16

The EPA's 2021 report titled "Climate Change Indicators: Tropical Cyclone Activity" states: Since 1878, about six to seven hurricanes have formed in the North Atlantic every year. Roughly two per year make landfall in the United States. The total number of hurricanes (particularly after being adjusted for improvements in observation methods) and the number reaching the United States do not indicate a clear overall trend since 1878.

The EPA's conclusion hurricanes have not become more numerous in recent years is unsurprising, because the IPCC's 2018 interim report came to the same conclusion. And the NHC reports hurricane impacts on the United States are at an all-time low. The United States recently went more than a decade, 2005 through 2017, without experiencing the landfall of a major hurricane measuring Category 3 or higher—the longest such period in recorded history.

How can climate change be making hurricanes more frequent, more powerful, and more deadly, when the data show none of the claims is true? The answer is, it can't.

So, while you gird yourselves for the onslaught of alarming stories claiming climate change is behind every pollen-induced sneeze, wildfire, tornado, and hurricane in 2022, keep your allergy medicine on hand and your home insurance paid up, and take comfort in the fact that all of these claims are false. TOO HOT MODELS FOUL UP CLIMATE PROJECTIONS Climate modelers and scientists assessing them are once again acknowledging climate models are running too hot, meaning their projections for future climate change can't be trusted. A new paper in the peer-reviewed journal Nature points out the "parade of 'faster than expected' [temperature rise] results … threaten to undermine the credibility of climate science."

The paper argues researchers should no longer use the average of all the climate model projections, which includes models that reference Representative Concentration Pathway 8.5 (RCP 8.5), the highest emission scenario ever used, because RCP 8.5 is actually impossible. Using climate models that contain RCP 8.5 results in global temperature projections as much as 0.7°C warmer than an estimate from the Intergovernmental Panel on Climate Change for 2100, and much higher than actually recorded temperature trends.

"We need to use a slightly different approach," comments Zeke Hausfather, lead author of the paper. "We must move away from the naïve idea of model democracy."

Instead, he and his colleagues call for a model meritocracy, prioritizing results from models simulating rates of warming which most closely correspond to the rates of warming actually recorded by land-based temperature stations, global satellites, weather balloons, and ocean buoys.

Among the agencies that use the flawed averaging of all climate models and assume too great a sensitivity to increases in carbon dioxide emissions are the National Center for Atmospheric Research, the U.S. Department of Energy, the United Kingdom's Met Office, and Environment and Climate Change Canada.

Wind, Solar Struggle With Higher Prices Andmaterial Shortages

Eversource, the largest energy provider in New England, initiated a review of its offshore wind ventures, which have been endorsed and encouraged by the Biden administration. The company is undertaking a "strategic review" of its 50 percent stake in multiple joint offshore wind projects with international renewable energy giant Ørsted to determine if the projects still make good business sense. Eversource serves about 4 million customers in Connecticut, Massachusetts, and New Hampshire. The multi-billion-dollar joint ventures with Ørsted include three offshore wind projects: the South Fork Wind and Sunrise Wind projects off New York's coast and the Revolution Wind planned for waters off Rhode Island.

Eversource's review could lead to the sale of all or part of the company's stake in its partnership with Ørsted. Eversource touted its joint offshore investments with Ørsted as late as February 11, at a groundbreaking ceremony for the South Fork Wind project in East Hampton, New York. The groundbreaking was attended by U.S. Interior Secretary Deb Haaland and New York Gov. Kathy Hochul (D).

Despite singing the praises of its offshore wind efforts just three months ago, Eversource is now putting the brakes on. Eversource's review comes amid difficult times for the wind and solar industries. Commodity prices for elements critical to solar panels and wind turbines have risen faster than the rate of inflation in recent months. This has resulted in materials shortages, project delays, cost overruns, and declining profits for wind and solar developers.

The Daily Caller reports the average price for wind, solar, and battery technologies increased 28.5 percent between 2021 and 2022, while the number of wind and solar project completions fell sharply, by 73 percent, between 2019 and 2021.

VOICE OF JERUSALEM

No One to Talk to in Washington

By Caroline Glick

On Tuesday (4/27/2022), Israel Hayom reported that there is a growing sense among Israeli and U.S. officials that the Biden administration will not reach a nuclear accord with Iran. To be understood the report has to be seen in the context of a statement made later Tuesday by President Joe Biden's press secretary Jen Psaki.

During her daily press briefing, Psaki said that the administration assesses that Iran is just weeks away from nuclear breakout capabilities. Nuclear breakout is reached when a state achieves the independent wherewithal to develop nuclear weapons. A nuclear breakout state does not necessarily have nuclear weapons. But it is regarded as a nuclear armed state because it has the capacity to build a nuclear arsenal at will and within a relatively short period of time.

The Biden administration began its nuclear talks with the Iranian regime in Vienna in April 2021. The declared purpose of Biden's nuclear diplomacy, like the declared purpose of the Obama administration's nuclear talks with Iran which led to the 2015 nuclear agreement, is to prevent Iran from becoming a nuclear power. But the content of Obama's nuclear agreement and the leaks regarding the content of the deal that Biden's team is negotiating make clear that the opposite is the case. The content of both makes clear that far from preventing Iran from becoming a nuclear armed state, the intended end of the both agreements, was and remains, enabling Iran to become a nuclear armed state, equipped with the economic wherewithal and diplomatic power to dominate its neighbors in the region.

The limitations the 2015 deal placed on Iran's nuclear operations were insignificant when compared with the carte blanche Iran received to develop more advanced nuclear capabilities. While Iran was ostensibly curbing the quantities of low-enriched uranium it was permitted to stockpile under the deal, it was developing advanced centrifuges capable of enriching uranium to bomb grade levels. Those capabilities are permanent whereas the restrictions Iran accepted on the nuclear activities it was carrying out in 2015 were temporary.

Then too, those temporary limitations were supposed to be enforced by a harsh, intrusive inspections regime. But the inspections regime the Iranians agreed to left much of their nuclear program outside the purview of UN nuclear inspectors, thus effectively rendering the entire inspections regime partial and fundamentally uncredible.

The most optimistic projections claimed that the 2015 deal kept Iran a year away from nuclear breakout. That view was disputed by then president Barack Obama who admitted that at the end of the lifespan of the deal in 2030, Iran's breakout time would be reduced to zero.

The most optimistic assessments of Biden's sought for nuclear deal claim it will keep Iran 4-6 months from nuclear breakout from the moment the Iranians decide to cross the nuclear threshold.

This brings us to the claims by Psaki, other U.S. officials and senior Israeli officials this week that the Iranians are currently weeks from nuclear breakout.

The Foundation for Defense of Democracies in Washington, DC has been one of the leaders of the campaign for harsh economic sanctions against Iran in response to its nuclear weapons program for the past fifteen years. On March 3, the FDD published a report titled, "Iran Approaches the Nuclear Threshold." The report set out the timeline of Iran's nuclear advances over the past four years. In May 2018, then President Donald Trump withdrew the U.S. from Obama's nuclear deal with Iran due to Iran's breaches of the substance and spirit of the agreement. In May 2019, Iran announced that it was renouncing its commitment to the limitations on its nuclear activities it had accepted under the deal.

Despite their announcement, the Iranians did very little to openly expand their nuclear operations. Their reticence had three sources. First, they feared eliciting a harsh response from Trump. Second, they wished to empower the Democrats who had officially committed to reinstating the U.S. commitment to Obama's nuclear deal upon retaking the White House. Finally, the frequent sabotage assaults against Iran's nuclear facilities along with the assassinations of Iran's senior nuclear scientists and officials, attributed to Israel, kept the Iranians off balance and forced them to devote their main efforts to defense, rather than to moving forward with their nuclear capabilities.

Shortly before Biden was inaugurated in early January 2021 the Iranians abrogated their agreement to the most significant aspects of the nuclear deal's inspections regime and increased their level of uranium enrichment from the 3.67 percent purity permitted under the 2015 deal to 20 percent. In February 2021, Iran began producing uranium metal, which is mainly used to produce the core of nuclear weapons. Around the initiation of the nuclear negotiations in April 2021, the Iranians increased their level of enrichment yet again, to 60 percent enrichment, which is 99 percent of the way to weapons grade enrichment levels. They enriched the uranium with advanced centrifuges they developed after agreeing to the nuclear deal in 2015.

If the Biden administration's goal was really to prevent Iran from developing nuclear weapons, Biden and his advisors would have responded forcefully to Iran's actions. They would have strengthened the standing sanctions and imposed additional ones. But instead, Biden and Secretary of State Anthony Blinken stopped enforcing key sanctions and so enriched and empowered Iran still further and awarded the ayatollahs for their brinksmanship.

The administration greenlighted the transfer to Tehran of billions of dollars of Iranian government funds frozen under U.S. sanctions imposed by Trump's maximum pressure campaign. The administration stopped enforcing bans on Iranian oil and gas exports. Due to the administration's moves, today Iran reportedly earns as much from oil and gas exports as it did before Trump barred the sale of Iranian fuels on international markets.

The Biden administration blocked the UN's International Atomic Energy Agency from publishing a harsh report condemning Iran's massive breaches of the 2015 nuclear deal and outlining its illicit nuclear activities. The State Department has released reports on Iran's breaches of its nuclear limits, in accordance with U.S. law. But it watered down the language to make it seem that Iran's behavior is acceptable.

The U.S. has responded weakly to Iran's wanton aggression against Saudi Arabia and the UAE. In the first days of the administration, Biden removed Iran's Yemeni proxy the Houthis from the State Department's list of foreign terrorist organizations and has kept the Houthis off the list despite their escalating attacks on the UAE, Saudi Arabia and US forces in those states.

Even worse, the Biden administration continues to court Iran and seems poised to remove the Iranian Revolutionary Guard Corp from the list of Foreign Terrorist Organizations even as the IRGC has deployed cells to assassinate former Secretary of State Mike Pompeo, former national security advisor John Bolton, and former Iran coordinator Brian Hook. The three former Trump administration officials receive around the clock protection.

In January, a Twitter account associated with Iran's dictator Ali Khamenei posted an animated video of an Iranian hit squad assassinating former President Donald Trump on his golf course.

In summary, both the content of the nuclear deal that Biden seeks to achieve and the administration's permissive responses to illicit Iranian nuclear and terror operations make clear that Biden's true object is to facilitate Iran's acquisition of nuclear weapons and hegemonic power, even at the expense of U.S. allies, strategic interests and national security.

This returns us to Tuesday's report that the Biden administration may be ready to pull the plug on nuclear negotiations and on achieving a new deal to limit Iran's nuclear operations. While it is clear that Biden's desired diplomatic end state is to get a new nuclear agreement with Iran that may extend Iran's nuclear breakout time from a few weeks to 4-6 months at the outside, it's possible that the administration may be willing to see Iran become a nuclear breakout state outside an agreement. While this is Clearly not Biden's preferred outcome, Biden and his advisors may believe that it could be politically advantageous for them going into the midterm elections in November.

If Iran crosses the nuclear threshold outside the confines of a nuclear deal, Biden and his advisors may believe that they will be able to blame Trump for the outcome. Since taking office, despite the fact that Iran only began to significantly stepped up its nuclear operations after he was elected, and mainly since he entered office, Biden and his advisors have been insisting that Trump is responsible for Iran's actions. According to their reasoning, if the U.S. had remained in the nuclear deal, Iran would not have begun breaching its commitments to restrain its nuclear behavior.

As for Israel, the Bennett-Lapid-Gantz government gives the impression that Israel's leaders think Biden's rhetoric is more important than his actual policies. Prime Minister Naftali Bennett and his partners like Biden's attacks against Trump because those attacks are aligned with their own attacks on former Prime Minister Benjamin Netanyahu. Almost every day since forming their government last May, Bennett, Foreign Minister Yair Lapid and their colleagues have insisted that had Netanyahu not proved to Trump that Iran was breaching the 2015 deal and that the Iranians had lied to the Americans about their intentions, Trump wouldn't have abandoned Obama's nuclear deal and Iran wouldn't be weeks from nuclear breakout.

Although reports of sabotage of Iranian nuclear and drone installations still pop up from time to time, the volume of reports has dropped precipitously since last May. Upon entering office, the Bennett-Lapid government promised the U.S. total transparency in Israel's operations in Iran. The implication was that Bennett and Lapid were giving the administration veto power over Israel's operations.

With the precipitous drop in offensive activities against Iran's nuclear installations, the Iranians now feel free to spend less efforts protecting their nuclear installations and more time using them to develop nuclear weapons.

Without effective inspections on Iran's nuclear and missile sites, it is hard to know just where Iran stands in terms of moving from breakout capacity to an actual nuclear arsenal. Israel estimates it will take Iran a year or two to move from where it ostensibly stands today on the brink of independent capacity to develop and deploy nuclear weapons to actually possessing deployable nuclear weapons.

Despite the uncertainty about when precisely Iran will become a nuclear power, what is absolutely certain is that so long as the Biden administration remains in power, Israel's leaders' faith in Washington endangers its existential interests.

Russia convenes UN Security Council *continued from page 1*

others of," Zelensky said late Thursday in his nightly address to the nation. "I am a reasonable person. The president of a reasonable country and reasonable people. I am the father of two children," he said. "And no chemical or any other weapon of mass destruction has been developed on my land. The whole world knows this."

Independent journalist Sharyl Attkisson noted on Friday that a list of Ukraine biolabs documents had been removed by the U.S. Embassy.

"Up until recently, the existence and details of these bioweapons labs were public knowledge. The U.S. Embassy had previously disclosed the locations and details of these laboratories in a series of PDF files online. On Feb. 26, 2022, the official embassy website shut down the links to all 15 bioweapon laboratories," Attkisson noted.

"All the documents associated with these labs have been removed from the Internet. If you click on any of the links, the PDF files are no longer available. Thankfully, these files have been archived and can still be accessed."

Another independent journalist, Lara Logan, posted links to some of those documents on Gettr:

The head of the Russian military's radiation, chemical and biological protection troops, Igor Kirillov, doubled down on Russia's claims on Thursday, saying that U.S.-sponsored labs in Kyiv, Kharkiv and Odessa were working on dangerous pathogens custom-designed to target Russians and other Slavs.

"We can say with a high probability that one of the goals of the United States and its allies is the creation of bioagents capable to selectively infect various ethnic groups," Kirillov said.

Russian Foreign Minister Sergey Lavrov made a similar claim Thursday, alleging that U.S.-directed labs in Ukraine were working to "develop ethnically targeted biological weapons."

China added fuel to the fire.

"This Russian military operation has uncovered the secret of the U.S. labs in Ukraine, and this is not something that can be dealt with in a perfunctory manner," Chinese Foreign Ministry spokesperson Zhao Lijian said Thursday. "It is not something they can muddle through by saying that China's statement and Russia's finding are disinformation, and are absurd and ridiculous."

Brandtjen Exposes 2020 Election Fraud *continued from page 12*

Democrat strongholds.

She also described Michael Spitzer-Rubenstein's illegal presence in the counting room, the resignation of Green Bay's municipal clerk in protest of his interference, and the mistreatment of Republican poll workers.

The audience was quiet at first, but got rowdy during the Q&A. Four or five men were loud, angry, and almost disrespectful of the speaker and others. They could not understand why bad actors haven't been arrested, why the election hasn't been decertified, why Republican members of Congress refer to Joe Biden as "Mr. President" when they "all must know" that he didn't win the election.

Some real frustration was expressed with Wisconsin Republican leadership, in particular Speaker Robin Voss. Many people wanted to know what they, as individuals could do. Brandtjen seemed a little flat-footed (for the first time all evening) and could only recommend that folks become poll workers and sign the nomination petitions.

Texas researcher warned Wuhan lab of inquiries *continued from page 18*

On April 18, 2020, Zhengli rejects De Luc's request: "Due to the complicated situation, I don't think it's a right time to communicate by the call. What I can tell you is that this virus is not a leaky [sic] from our lab or any other labs. It's a shame to make this scientific question so complicated."

Le Duc responds: "I understand completely and I certainly do not wish to compromise you personally or your research activities. Given our long history of collaborations between the GNL Galveston National Laboratory and the WIV (Wuhan Institute of Virology), I have been approached repeatedly for details on our work. Attached is a draft summary that I will be providing to the leadership of our University of Texas system and likely to Congressional committees that are being formed now."

The draft attachment was not included in the PIA production.

In an email dated April 20, 2020, Le Duc informs Zhengli and the Director of the Wuhan National Biosafety Laboratory at the Chinese Academy of Sciences Dr. Yuan Zhiming that he is concerned that the Wuhan lab would continue to be the focus of investigation: "I'm afraid that this discussion will continue for some time regarding where early coronavirus work was being done.
