"The essential quality of a market system, contrary to popular thinking, is not that it promotes greed; But rather, that it renders greed harmless." Israel Kirzner

Joan of Eau Claire

Joan of Eau Claire

Young girl stared down COVID tyranny…and won

Guest Perspective by Dan O'Donnell for the MacIver Institute

Throughout history, the fires of revolution have been lit by the tiniest of sparks. The flicker of rebellion—often from the unlikeliest of sources—engulfs a people and inspires them to burn down the tyranny that has subjugated them.

Long after the Wisconsin Supreme Court struck down the most draconian of COVID restrictions, a handful of tinpot dictators in local health departments are still doing their best to keep their cities as miserable as possible.

Fortunately, the spark of rebellion is still flickering and in Wisconsin it lies in a teenaged girl whose civil disobedience has exposed the absurdity of her city's quarantine rules and made her into something of the state's Joan of Arc.

Call her Joan of Eau Claire.

Last week, Mikaila Spiess, a freshman at Eau Claire Memorial High School, was notified that she came into close contact with a classmate who tested positive for COVID-19. As a result, she would have to be quarantined for 14 days, or seven days if she tests negative.

Mikaila, who goes by the nickname Pixie,

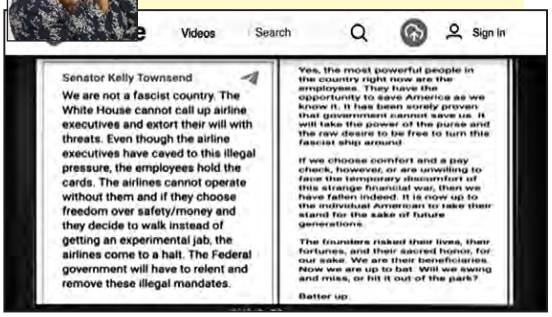
Senator Kelly Townsend: We Are Not A Fascist Country



The Coming Civil War

By Gary L. Wickert

In 1860, as President Abraham Lincoln delivered his unifying First Inaugural Address, there were insurgents afoot in that very city whose goal it was to destroy the Union from within. All thoughts were directed toward an impending war, with pro-slavery Democrats fighting for the survival of that institution, and anti-slavery Republicans committed to its abolishment. The two sides saw two very different Americas, and all efforts at compromise cast that elusive objective as both impractical and impossible as it related to American slavery. A man was either free or he was not. As Lincoln put it, "Both read the same Bible, and pray to the same God; and each invokes His aid against the other. It may seem strange that any men should dare to ask a just God's assistance in wringing their bread from the sweat of other men's faces; but let us judge not that we be not judged." War came.

Four years later during his Second Inaugural Address and while the war was still raging, President Lincoln spoke again of the two parties at war.

Can the U.S Unite? If not, How Does It Divide? Part I of V

By William L. Kovacs

Every aspect of U.S. society seems like it is getting more and more polarized. Politicians tear at each other. The news media and social media are divided between "fake news" and "lies." Our institutions, including religious institutions, are no longer trusted. A part of several states wants to join a different state. Some states just want to split. The federal government makes Marie-Antoinette look like a conservative money manager. For a century and a half, the federal government has expanded its powers by diminishing the standing in the union of the sovereign states. And Americans are exhausted by

Steve's Say . . .
Standing at the Edge of the Precipice

By Steve Welcenbach

Today (10/14/21) I write from one of the comfy chairs on my patio. The sun just came out, warm and invigorating, after hiding for most of the week, save for a couple of peeks around 5 o'clock this week to reiterate God's promise to mankind in brilliant rainbow displays.

The striking color of the few surviving ash trees combined with the crimson tips of the autumn blaze maples mark Time's march forward into the depth of Fall, foreshadowing the dark, cold days of winter forthcoming. The squirrels jump around relentlessly with overloaded mouthfuls of nuts, apples and whatever else they can find to store up for the inevitable coming of Winter's fury.

God's plan of creation continues onward, just as it always has since the beginning of His work, unabated and unfazed by whatever happens in the world of Men. No greater testament could be given as to the width, breadth and depth of God's greatness and sovereignty.

Yet in the realm of Men, we stand on the brink of events that will forever change the course earthly existence. On one hand, we have "The Great Reset," the term coined by Klaus Schwab and the totalitarian central banking cabal who aim to subjugate every person on the planet to their system of complete surveillance and control. Klaus Schwab characterized it in this way: "You will own nothing and love it!"

This plan, long in the making from seeds sown even before our founding and plans drawn up and polished throughout the last century, completes all the goals of Agenda 21, Agenda 2030, the Green New Deal and Population Reduction. The world's self-proclaimed elite become the gods they truly believe they are, with all things subject to their will and all their needs, desires and fantasies fulfilled.

While the Globalist totalitarians furiously attempt to bring forth "The Great Reset" using media fear porn, lockdowns, vaccine mandates and passports, energy and food shortages and constipation of the supply chain, a giant force akin to a tidal wave opposes and upsets all they do. And this mysterious force continues to build stronger the harder they push. This force, the Power of the People, burgeons as people exorcise the satanic spell of media lies and political deceptions. Corruption in governmental and religious institutions operates openly, threatening dire recourse to any opposition or even discourse. People begin to understand that they've been lied to by media, government and academia their whole lives. Patriots around the world call this phenomenon "The Great Awakening."

The cabal's system of fake money, income taxes and debt imposes a yoke of slavery on all the people of the world, most blindly unaware, largely because they were born into it and know nothing else. The incomplete and/or false history most learned in school derived directly from this cabal's efforts to keep their plans and goals hidden until the proper time, when it's too late to stop. As I see world events today, that time has come.

Or has it? The Totalitarians either hide nothing anymore, or are fully exposed, depending on your perspective. Many of us who regularly follow truth media believe a counter plan, begun decades ago, diligently conceived and continually modified along the way, will harness the Power of the People in a "Great Awakening" to thwart this effort to impose planetary slavery and all of the other evil components of the globalist cabal plan. The criminal syndicate "operating" the US federal government and most others around the world must be completely dismantled, up and down and side to side, for no trace of constitutional government remains in them. The unavoidable messiness of this deconstruction will transform the character of all survivors for the rest of their days.

The policies and stunts pulled off by the "Biden" regime along with subversive allies and counterparts at home and abroad has placed the world economy at the edge of free fall. Many of us foresee a major meltdown of the economy in the coming weeks. This meltdown, purposely manufactured by the New World Order to usher in their "Great Reset," will trigger street violence, not from patriotic Americans, but from the shock troops of the Left, which includes Antifa and the army of illegal immigrants allowed in through the southern border or flown in from Afghanistan.

So if this scenario happens, who stops the rioters? How does this end? The military. Remember, their allegiance to the constitution trumps all, the contract of the government with the People. If they honor that allegiance, they must defend the People against these enemies, which are both foreign and domestic. Some think corruption in the military reflects that of the rest of the government entities. If that's the case, we're in trouble.

So today we stand at the edge of the great precipice. If Klaus Schwab and his satanic band of elitists successfully implement "The Great Reset," the world plunges over the edge into the abyss, which no one knows where the bottom lies, or even if one exists.

If however, the "Great Awakening" counters the satanists, dismantles the criminal governments in America and around the world, and rebuilds proper institutions in the likeness of the original constitution with limited powers properly constrained by the federalism of the States, then the world can march up to new heights never seen before. Who knows how many secrets have been kept from the people, from cures for illnesses to transformational technologies to harness energy or facilitate travel?

One thing I do know for certain: God ALWAYS wins. Christ defeated death. His plan marches on in spite of the petty schemes of men. The squirrels will still gather nuts, the ash trees keep dying off (for awhile), the oaks continue to stretch their limbs to the sky to the honor of their Creator. Should the Earth last another 200 years many will be here to help tell the story.

So I ask you to embrace the wisdom my wife and I learned through our prayer group in the last few weeks. In the immortal words of Saint Padre Pio, "Pray, Hope, and Don't Worry!"

Now that's Wisdom to Live By!

God Bless you all and keep the faith. God always provides.

"I choose gratitude and forgiveness over anger and bitterness. This allows me to see and appreciate the beauty and blessings in most everything."

- page 182 in "Something Beautiful is Going to Happen…"

Our Vision
We aspire to a world in which people, made in the image of God, reconciled to Him by Jesus Christ, and reflecting God's own creativity, work together to enhance the fruitfulness, beauty, and safety of the Earth, enabling more and more of our neighbors to enjoy good health, long life, freedom, justice, and spiritual and material abundance, for the glory of God and the good of our fellow man, thus fulfilling the two Great Commandments to love God and love our neighbor.

Our Mission
We seek to magnify the glory of God in creation, the wisdom of His truth in environmental stewardship, the kindness of His mercy in lifting the needy out of poverty, and the wonders of His grace in the gospel of Jesus Christ.

Our Identity
A coalition of theologians, pastors, ministry leaders, scientists, economists, policy experts, and committed laymen, the Cornwall Alliance is an evangelical voice promoting environmental stewardship and economic development built on Biblical principles.

Schedule a Speaker
Dr. Beisner and many Fellows, Adjuncts, and Contributing Writers are available to speak for churches, seminaries, universities and colleges, schools, and other groups. To schedule a speaker, email Calvin@CornwallAlliance.org.

Biblical Foundations for Economics—Yours Free!

By E. Calvin Beisner

When I was a young Christian, it never occurred to me to ask what the Bible taught about economics. The Bible was all about what Christ had done on the cross. I figured it had little, maybe nothing, to say about economics.

Was I ever wrong! Yes, certainly the Bible's main focus, Genesis through Revelation, is on Christ's saving work for sinners (like me). But in response to some challenges, I learned that it addressed a whole lot more of life—including economics.

In 1983 I set out to re-read the entire Bible, looking for passages relevant to economics. To my surprise, I found hundreds. And when I repeated the exercise four years later, I found I'd missed far more than I'd noticed. (And to this day I keep noticing more!)

Biblical Foundations for Economics is one fruit of my studies of what the Bible has to say on the subject.

Here's what Tracy Miller, Senior Policy Research Editor at the Mercatus Center and former Professor of Economics at Grove City College, says about it:

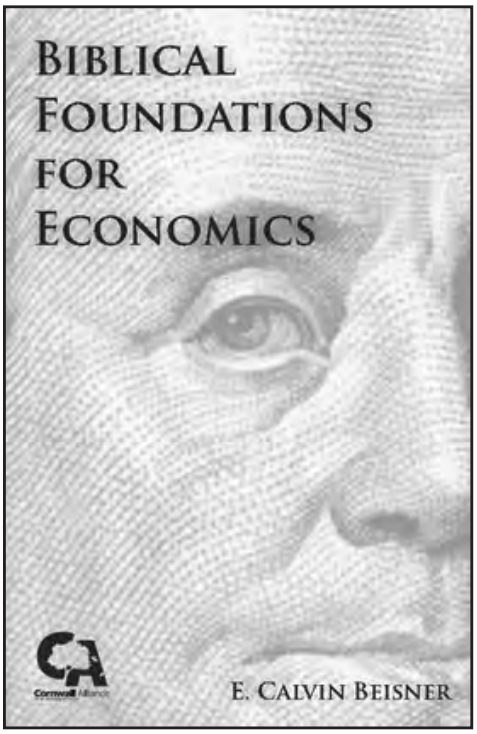
"How should a Christian think about economics? Theologian Calvin Beisner emphasizes the importance of combining prudence and good intentions to practice justice, love, and self-control."Building on ideas from Adam Smith's Theory of Moral Sentiments and Wealth of Nations, this book concisely discusses the value-laden nature of economics, using Scripture to develop Biblical foundations."

At a time when "Woke"/Progressive ideas are attracting millions of young people, including many Christians, it's crucial for God's people to have a firm Biblical basis for their own understanding of economics. Biblical Foundations for Economics offers that.

Through the month of October, you can obtain a FREE copy of it when you donate to the Cornwall Alliance. All you have to do is ask for it, and we'll send it as our way of saying thanks—no matter the size of your gift!

To receive yours, simply write "Promo 21-10 when you make your donation through our secure online giving page, by mailing your check to Cornwall Alliance, 3712 Ringgold Rd. #355, Chattanooga, TN 37412, or by calling us at 423-500-3009 by midnight on October 31. In any case mention, Biblical Foundations for Economics, or Promo 21-10. When giving online you can put the title in the comments box on the second page of our donation form.

Please note we do ask international donors to pay for shipping of the free gift. Offer valid only while supplies last. PDF available of certain resources on request.



Does the Anti-Meat Movement Really Assault Christian Doctrine?

By E. Calvin Beisner

Philosopher Peter Singer laments the Christian doctrines that "Humans alone are made in the image of God" and "God gives humans dominion over the animals." He says they have inhibited animal liberation.

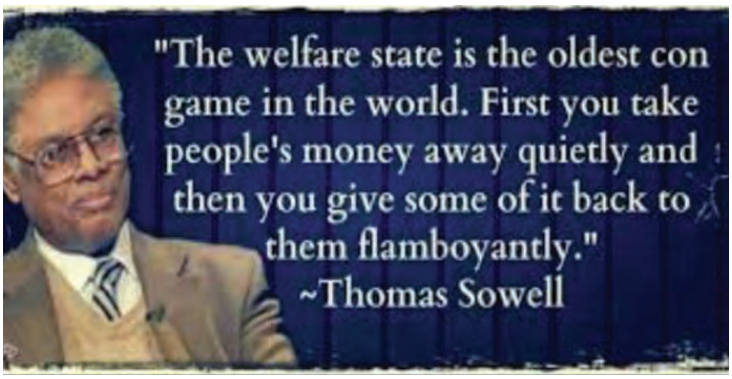
He's not alone. Increasingly, young evangelicals, many of them unmoored from the teaching of Scripture, embrace similar thinking. Oh, they might affirm the imago Dei and the gift of dominion in words, but they have embraced ideas incompatible with them.

They've embraced the ideas of "animal rights" and "compassionate eating." And they think anyone who opposes those ideas favors abusing animals and careless eating.

The book What Would Jesus Really Eat? The Biblical Case for Eating Meat explains that such thinking undermines three important Christian doctrines: human dominion over nature, which is the basis for human stewardship of earth and animals; human exceptionalism, that people are different from every other creature; and human freedom, that people may freely do whatever God does not forbid, whether explicitly or by logical implication, in His revealed law in Scripture. What Would Jesus Really Eat? identifies and refutes the flaws in the "Christian animal rights movement." It explains why our responsibility to treat animals responsibly does not imply that animals have rights—and what are the dangers of extending rights to animals.

It tells how proponents take traditional Christian doctrines and words, empty them of their historic meaning, and pour their own animal protectionist meanings into them.

We want to equip you to respond persuasively, and graciously, to those who have been led astray by such thinking.



The Heartland INSTITUTE
Ideas that empower people

The Heartland Institute is a national nonprofit research and education organization devoted to discovering, developing, and promoting free-market solutions to social and economic problems.

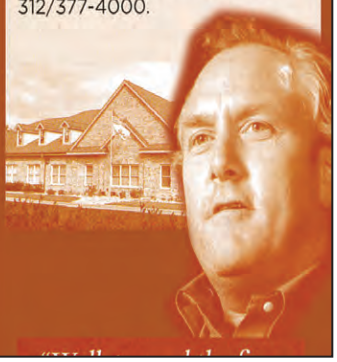
ANDREW BREITBART FREEDOM CENTER AT THE HEARTLAND INSTITUTE

On March 1, 2016, on the fourth anniversary of his death, The Heartland Institute dedicated the public meeting space in its new home in Arlington Heights in honor of Andrew Breitbart.

The Andrew Breitbart Freedom Center is a state-of-the-art meeting facility with seating for 75. Events are scheduled to take place every week in the space, featuring authors of new books, freedom activists and thinkers, and civic and business leaders.

"Andrew Breitbart was a genuine American hero," said Joseph Bast, president of The Heartland Institute, in a video announcing the dedication. "He inspired millions of people to stand up and speak the truth about what is happening in America. We could not be more pleased to have his name forever affixed to The Heartland Institute. We are honored that his family and friends believe this is a suitable addition to his legacy."

For more information about the Andrew Breitbart Freedom Center, please contact Nikki Comerford at ncomerford@heartland.org or 312/377-4000.



Shift Cop 26 To Iceland

By Viv Forbes

November's Climate Alarm meeting (COP 26) should be shifted from Glasgow in Scotland to Reykjavík in Iceland.

Twenty-five previous meetings of this very expensive travel club have achieved nothing useful, having wasted millions of dollars while industries are destroyed, CO2 levels continue to grow and global temperatures go nowhere.

These climate tourists gather in plush hotels for parties, eats and drinks, propose more destructive energy policies for the Western World, agree to meet again, and then fly home.

Holding the next meeting in Iceland would give them three useful lessons.

Firstly Iceland is cold, and growing colder. They should look at the Myrdasjokull glacier which has recently had a significant addition of ice. The Hofsjokull, Langjokull, Myrdasjokull and Vatnajokull glaciers have also expanded.

COP26 could ponder the cold hungry future for mankind when the globe moves inevitably into its next cycle of ice, and their green energy baubles fail.

Secondly they should take a short tour to see something real - the Fagradalshraun volcano, the first shield volcano to erupt in Iceland in about 8,000 years. This one volcano has emitted about a million tons of CO2 in three months. Who is figuring that into their carbon targets?

Thirdly, Iceland can also provide COP26 tourists with a lesson in climate futility. While the volcano is pouring millions of tonnes CO2 into the atmosphere, Iceland is spending $millions on collecting some of that gas to send it back underground.

COP delegates should also ponder the destructive stupidity of the EU 'climate package' that will have no effect on future climate:

Václav Klaus, previous president of the Czech Republic has described it well:

"This EU climate package is not bold. It is stupid and nonsensical. It is unrealistic, and if it were to be implemented, it would be completely destructive to the lives, freedom and living standards of the people of Europe."

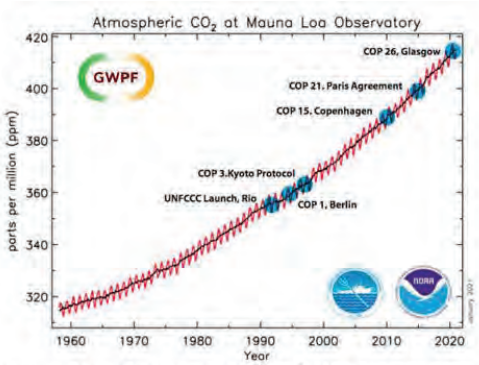
Time for Truth-Telling in Glasgow

By Viv Forbes

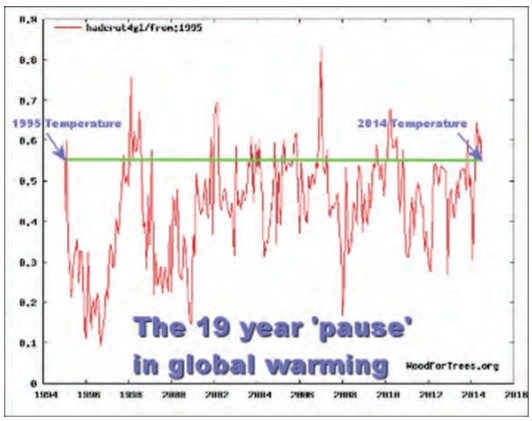
For 26 long years the UN and their tame media have promoted their expensive annual climate carnivals. This month they will flock to Glasgow for COP 26 but they will not arrive on Shetland ponies, penny farthings or sailing boats - hydro-carbon energy will get most of them there and keep them warm and well fed.

These jamborees are designed to spread climate lies and green energy propaganda.

In the beginning, the witch-doctors of the global warming religion spread lurid tales of drowning polar bears, rising sea levels, dying corals and spreading deserts - all blamed on the wicked coal, oil, cattle and cars that they claim are destroying our green planet. Those disasters never happened. Now truant school kids (who learn their version of climate "science" from smart-phones and social media) are promoting emission reduction by gluing themselves to roads.



REALITY CHECK: 30 YEARS OF CLIMATE POLICY ACHIEVEMENTS



The media love scare stories. But despite alarming model projections, decades have passed with no unusual global warming, so their shock stories changed to "wild weather" and every cyclone, tornado, drought, bushfire or flood was trumpeted as proof of looming disaster. "Storms" morphed into "super-storms", "bushfires" became "fire-storms" and now the media can report "super-tornadoes" without defining them.

It's time for: "Truth-telling in Glasgow".

The coming northern winter will confirm the first energy truth – wind, solar, batteries and electric vehicles will not keep people warm and well fed. The soaring demand for hydrocarbon fuels, the coming electricity blackouts and rationing, and bare grocery shelves will reveal what the media won't. In the interests of

Continued on page 8

Environmental Destruction

continued from page 1

like his love of solar power and electric vehicles, President Joe Biden's support of wind power is promoting some of the worst human rights abuses and environmental destruction in the world, all in the name of so-called "clean energy."

In support of his Build Back Better plan and the infrastructure bill currently in Congress, Biden told a union audience in Howell, Michigan on Oct 5:

"This bill helps us get there in a way that creates good jobs, makes us global leaders of fast-growing clean energy industries, like electric vehicles, solar and wind power, battery power."

Michael Moore's new film, "Planet of the Humans," demonstrates that, when you consider how these machines are made, wind and solar power, electric vehicles and batteries are anything but clean. They may very well be the dirtiest and most environmentally destructive energy technologies on the planet.

To understand what has happened, and how so many good-hearted people across the world have been deceived by the clean, renewable energy myth, readers should look up the newly released book, "Clean Energy Exploitations - Helping citizens understand the environmental and humanity abuses that support 'clean' energy," by engineer and energy consultant Ronald Stein and Todd Royal, an independent public policy consultant focusing on the geopolitical implications of energy.

Stein and Royal's book helps the public understand how the development of so-called clean energy by countries such as the U.S., Canada, Germany, and Australia are exploiting the most vulnerable people in the world and destroying their environments.

They explain that many African, Asian, and South American children are being enslaved and dying in mines and factories to extract and process the rare-earths and exotic minerals required for solar panels, wind turbines, electric vehicles, and utility-scale storage systems to work. These are unquestionably BLOOD MINERALS.

The most important components of electric vehicles, for example, are lithium-ion rechargeable batteries. The principal materials used in lithium-ion batteries are cobalt, lithium, manganese, and graphite. ICSC-Canada Economics/Policy Advisor Robert Lyman explained:

"A recent United Nations report warned that the raw materials used in EV batteries are highly concentrated in a small number of countries where environmental, labor, and safety regulations are weak or non-existent. 'Artisanal' cobalt production in the Democratic Republic of the Congo now supplies two-thirds of the global output of the mineral. Many of the mines employ child labor in extremely dangerous tasks. Up to 40,000 children are estimated to be working in extremely dangerous conditions, with inadequate safety equipment, for very little money in the mines in Southern Katanga. The children are exposed to multiple physical risks and psychological violations and abuse, only to earn a meager income to support their families.

"Lithium mining also presents social and environmental risks. Again, to quote the UNCTAD report:

'For example, indigenous communities that have lived in the Andean region of Chile, Bolivia, and

Continued on page 19

Lessons From Europe's Delusional 'Green Energy' Disasters

By Larry Bell

Europe's anti-carbon policy offers "Green New Disaster" lessons for America as soaring energy prices and crippling shortages have rippled across the Atlantic.

Efforts to meet their CO2 emission reduction commitments under the Paris Climate Accords through heavily subsidized wind and solar programs which don't provide reliable round-the-clock power have succeeded only in making Europeans more desperately dependent on competitively scarce and costly fossil energy to power their grids.

The U.K. and Germany have become ever more dependent on Russian natural gas after banning hydraulic fracturing which now allows their rich gas shale resources to go to waste. Meanwhile, the Netherlands is shutting down Europe's biggest gas field.

By 2013, Germany had installed more solar capacity than any other nation, much of it imported from China. Of the two, solar was less efficient than wind.

Adding that intermittent wind and solar electricity also challenged power reliability.

Up until 2008, Germany's grid had never been interrupted. In 2012 there were 1,000 brownouts, followed by more than 2,500 in 2013.

By 2020, the U.K. relied on wind for 24% of its power-generation mix, but didn't have a backup plan when it fell to 2% of supplies in late summer this year.

In the past decade the U.K. and Europe have shut down hundreds of coal plants, and Britain has only two remaining. Spain shut down half of its coal plants last summer.

Lackluster wind-power generation has contributed to a five-fold increase in European natural gas spot prices over the past year, while shuttering of those many coal plants has raised demand and caused prices of that fuel to triple.

Post-COVID fossil fuel consumption is causing demand and prices for carbon permits under the Continent's cap-and-trade scheme to surge, pushing electricity costs even higher, a condition that will become far worse as winter heating bills arrive.

Electricity prices in the U.K. last month jumped to a record £354 ($490) per megawatt hour, a 700% increase from the 2010 to 2020 average.

These skyrocketing power prices have caused U.K steel makers to suspend production as European metals producers are asking their governments for aid.

This is occurring as Europe's natural gas inventories — at a record low for September — are seeing benchmark prices soaring above $20 per MMBtu as they compete to attract global Liquefied Natural Gas (LNG) supplies.

Russia is exploiting Europe's energy difficulties by reducing gas deliveries, perhaps to pressure Germany to complete certification of its Nord Stream 2 pipeline, which bypasses Ukraine.

The Biden administration gave Moscow a pass to accomplish this by lifting a Trump sanction on the project.

Global competition for fossil fuels to meet critical energy demands is also surging across Asia and South America, where drought has crimped hydropower, and manufacturers are also consuming more energy to supply Western countries with goods.

Japan has become especially dependent on liquefied natural gas imports after shutting down most of its nuclear power plants after Fukushima in 2011.

Even China has been forced to ration electricity to energy-hungry aluminum smelters because of a coal power shortfall, sending world aluminum prices soaring to a 13-year high.

China has been forced to purchase a lot more coal from the U.S. after banning the commodity's import from Australia over a diplomatic spat.

With coal also in short supply, gas-powered generators in Asia are switching to burning oil, pushing up those prices. Goldman Sachs projects that crude could hit $90 a barrel by year's end, which could add 10 to 20 cents a gallon to gasoline prices at the pump.

Biden policies are already contributing to global oil supply shortages, with crude prices hitting $80 a barrel last month, and the Organization of the Petroleum Exporting Countries (OPEC) warning that oil could skyrocket higher without increased investment in new production.

Inexplicably, after shutting down the Keystone XL pipeline and drilling in the Arctic National Wildlife Refuge (ANWR) — while allowing Russia to complete its Nord Stream 2 pipeline under the Baltic to Germany — Joe Biden then unsuccessfully pleaded with OPEC to increase supply to help lower politically unwelcome U.S. pump and natural gas prices.

Americans are already feeling the pain of escalating energy prices, with electricity and utility gas up 5.2% and 21.1%, respectively, over the last 12 months in August. Some analysts predict that these inflationary costs may double this winter if U.S. production doesn't increase, and if global demand remains high.

Adding to this insanity, energy companies have scrapped a 116-mile pipeline to deliver gas from Pennsylvania to New Jersey due to regulatory obstructions as blockades by Democratic states in the Northeast have depressed gas prices and investment in the Pennsylvania Marcellus shale.

Accordingly, with gas in short supply, New York and New Jersey may wind up burning more oil for electricity this winter.

In the meantime, permits issued by the Interior Department for drilling on federal land declined to 171 in August from 671 in April.

Even worse, the Democrats' proposed "Build Back Better" $3.5 trillion-plus spending bill — costing an average $24,424 for each of America's 143.3 million taxpayers — includes royalty and fee increases that would make U.S. oil and gas producers globally uncompetitive.

Although this socialist extravaganza will realistically weigh in at more than $5 trillion, Joe Biden somehow argues that all of this will cost "zero."

Meanwhile, despite hundreds of billions of dollars of global subsidies for intermittent wind and solar power, a Renewables 2021 Global Status Report (GSR) covering a period from 2009 to 2019 indicates that the percent of world final energy consumption coming from fossil fuels had dropped "all the way" from 80.3% to 80.2% ... an almost imperceptible 0.1%.

All this underscores that while remaining the world's largest gas producer, surpassing our adversaries Russia, Iran and China, America isn't immune from turmoil in energy markets.

As observed by The Wall Street Journal, Europe offers a portent of the havoc to come under the Biden administration's policies that aim to shut down fossil fuel production and power the U.S. grid with dependence on "renewables."

Instead — no matter how heavily subsidized in vain hopes to purge CO2 (plant food) from the economy — Europe's problems offer a dire warning to America, if only Democrats will heed it.

Larry Bell is an endowed professor of space architecture at the University of Houston where he founded Sasakawa International Center for Space Architecture and the graduate space architecture program. His latest of 10 books, "What Makes Humans Truly Exceptional," (2021) is available on Amazon along with all others.

State of Fear

We presently sit within a Tribal divide. Two groups. Those that fear Climate Change and Covid and those that fear their loss of Freedom. Both are in a State of Fear.

For students of Global Warming, AKA, Climate Change below is a precise parallel to the present attack on Science. To paraphrase DDE's words, we are faced with both a Climate Industrial Complex and a Political Medicine Industrial Complex.

At the 78th Annual Meeting, the AAPS (American Association of Physicians and Surgeons) Board of Directors approved a "Statement on Scientific Integrity in Medicine":

By advocating for their patients' best interests every day in multiple clinical settings, physicians earn high levels of public trust. A key component of the clinical practice of medicine consists of translating medical science into individualized patient treatment plans. Calculation of medical risk and benefit for individual care is the exclusive province of a patient-physician relationship grounded in trust and fiduciary responsibility.

Scientific integrity is enforced through the publication of ideas, scholarly debate, and careful observation in clinical practice. The interpretation of science is not the exclusive privilege of any one disciplinary body, advisory committee, professional journal, or forensic expert. Neither the scientific method nor clinical practice require adherence to consensus, because diversity of opinion is the engine of progress. In science, hypothesis and theory are always open to revision as new evidence emerges.

The American Medical Association (AMA) Code of Ethics affirms the paramount place of the duty to advocate for the individual patient. The AMA has also recognized innovative practice and freedom in professional speech as ethical and fundamental components of high quality clinical care.

Since the start of the COVID-19 pandemic, various government agencies have launched public health campaigns to promote specific social and medical responses to the pandemic. Parallel campaigns have used allegations of professional misconduct to discredit physicians who are perceived as undermining the public health message. "Misinformation" has become the pejorative label of choice to disparage differing opinion.

Some state medical boards and the Federation of State Medical Boards (FSMB), a private entity, have published public threats of disciplinary action around "misinformation," including revocation of medical licenses, in attempts to enforce a manufactured public health consensus in professional speech and clinical care. No medical code of ethics has articulated a duty to practice consensus-driven medicine in the service of public health to the detriment of individual patients.

Advocating for the interests of patients includes giving them access to all information and supporting them in decisions that involve their personal mental and bodily integrity. The prospect of of scientifically unsupported disciplinary actions creates an environment of fear, impeding physicians' ability to fulfill their ethical duties to provide fully informed consent to each individual patient.

We believe it is unethical for physicians to participate in any process that impedes the free exchange of scientific and clinical ideas through public allegations of misconduct or threats of punishment. Use of the stigmatizing label "misinformation" in a medical disciplinary environment is anti-scientific and unethical. ...

All Trees, Grass and Cows are Green

By Viv Forbes

Growing trees need three essentials – radiant energy from the sun, CO2 and rain from the atmosphere, and nutrients and minerals from the soil. Climate alarmists correctly claim that burning forest products in thermal power stations is "net-zero emissions" because burning the wood just puts the same CO2 back into the atmosphere.

Identical reasoning applies to grazing cattle.

Grasses have the same needs as growing trees: sunlight, CO2, water, and soil nutrients. Cattle eat pastures to build proteins, fats and bones. If meat and milk from cattle is consumed by humans, some of the carbon is quickly returned to the atmosphere via emissions from cattle and humans (from both ends). The rest is sequestered for a longish time in human bodies, bones and cemeteries but eventually returns to the atmosphere.

Thus raising cattle for meat or milk produces negative carbon emissions in the short term and "net zero emissions" in the long term. Managed properly in concentrated moving herds, grazing cattle also improve the health and carbon content of pastures and soils.

Thus "All Cows are Green".

What about bovine methane? The carbon in methane comes from pastures and the atmosphere – grazing cattle put it back.

About 20% of Earth's surface is covered by grasslands but trees and scrub are continually invading the grass. Huge mobs of wild and domesticated ruminants have been grazing the grasslands for millennia, providing food for humans and other carnivores further up the food chain. Replacing wild herds of grazing ruminants with domestic herds of grazing ruminants is another net zero game.

Without grasses and ruminants, humans would starve. Despite what the green-smoothie set believe, humans cannot digest grass - that needs the second stomach of ruminants and that natural digestion process produces methane emissions. These emissions return valuable carbon to the atmosphere to nourish next season's grasses.

Methane has always seeped from marshes, bubbled from methane hydrates under the oceans and leaked from coal seams, oil and gas seeps, termite mounds and volcanoes.

Ruminants will never trigger global warming but global cooling is a deadly threat. We are past the peak of this warm era. When the great ice sheets return only those with reliable energy and food supplies will survive.

If we protect our cattle, they will support us.

SCIENCE & ENVIRONMENTAL POLICY PROJECT

The Week That Was October 9, 2021

Quote of the Week:

"Nullius in verba"
– The Royal Society [UK]

****

Number of the Week:

0.12 °C per
Decade over oceans

****

THIS WEEK:
By Ken Haapala, President Science & Environmental Policy Project (SEPP)

Science Societies: The Royal Society of London for Improving Natural Knowledge was founded in 1660 following a lecture by Christopher Wren. In 1663, the group received approval by King Charles II resulting in its name. It focused on natural philosophy, or the systematic study of nature, which subsequently became called "science." This differed from German natural philosophy which tried to achieve a unity of nature and spirit. The motto of The Royal Society has served it well:

"The Royal Society's motto 'Nullius in verba' is taken to mean 'take nobody's word for it'. It is an expression of the determination of Fellows to withstand the domination of authority and to verify all statements by an appeal to facts determined by experiment."

Global climate modelers have rejected experiments in spectroscopy, the study of the interaction between matter (atoms and molecules) and electromagnetic radiation which started with John Tyndall in 1859, who named the greenhouse effect (or they do not understand infrared absorption at all pressures and temperatures). Even though spectroscopic analysis has been crucial in the development fundamental theories such as special and general theories of relativity, quantum mechanics, and quantum electrodynamics, global climate modelers consider the controlled experiments too confining, too limited.

The awarding of a Nobel in physics to climate modelers provides an excellent opportunity to review what systematic physical evidence climate modelers offer to support their bold claims that human emissions of carbon dioxide are causing dangerous global warming. These claims are giving politicians an excuse for declaring a climate crisis and seizing emergency, dictatorial powers.

Climate Models Themselves: The Nobel was divided into two halves. One half went to Syukuro Manabe and Klaus Hasselmann "for the physical modelling of Earth's climate, quantifying variability and reliably predicting global warming." (Note that reliably predicting global warming is results-driven unlike reliably predicting the climate.) The second half went to Giorgio Parisi "for the discovery of the interplay of disorder and fluctuations in physical systems from atomic to planetary scales." Manabe did his work at the Geophysical Fluid Dynamics Laboratory at Princeton, which is financed by NOAA. Hasselmann is Professor Emeritus at the University of Hamburg and former Director of the Max Planck Institute for Meteorology. Manabe's work will be the focus of this section of TWTW.

The other half of the Prize went to theoretical physicist Giorgio Parisi at the Sapienza Università di Roma. His work will be discussed in the section below.

Piers Forster, a Professor of Physical Climate Change and Director of the Priestley International Centre for Climate at the University of Leeds, provides a valuable guide for addressing the work of Manabe and climate modelers in general. After recognizing the limits of computer power in 1967, when Manabe's major paper was published, Forster writes:

In trying to simplify the code, Manabe and his colleague Richard Wetherald[Wetherald died in 2011, thus is ineligible for the award] wanted to know the minimum number of discrete levels to use in his model atmosphere. They also wanted to know which greenhouse gasses it was necessary to include in the model to adequately represent the way temperatures vary with altitude, as these gasses absorb heat emitted from the Earth's surface, but at different levels. Their three-dimensional climate model was too computer-intensive to run these model tests, so they had to build a simpler one-dimensional model. They wanted to simulate how radiation and clouds interact to redistribute heat and water vapor through the atmosphere.

The bulk of the paper concerns itself with building the simple model and doing these tests. But they also do two other experiments in the paper to quantify how greenhouse gas might alter climate. And this is where the breakthrough occurred: they found they had built the perfect model to accurately estimate how human activities could alter the Earth's surface temperature.

Their first such climate-change experiment wasn't to look at the role of carbon dioxide but was to look at the effects of water vapor injected high into the stratosphere from a potential fleet of supersonic jets, as this and a possible nuclear winter were the immediate concerns of the time. However, their Table 5 goes down in history as the first robust estimate of how much the world would warm if carbon dioxide concentrations doubled. Manabe and Wetherald estimated 2.36? of warming, not far off today's best estimate of 3?.

Earlier attempts to estimate the warming from carbon dioxide increases had floundered, as scientists struggled to work out how water vapor, the most important greenhouse gas in the atmosphere, would respond as the Earth warmed. Manabe and Wetherald's simple model could accurately redistribute water vapor in a way that real deep clouds do, with water vapor broadly increasing in concentration up to a certain level of humidity. This increase was found to amplify the warming from carbon dioxide by around 75%. This water vapor feedback estimate has also stood the test of time.

Manabe, working with various colleagues, went on to write many more seminal climate modeling papers. He set the foundation for today's global climate modeling efforts. The physics was beguilingly simple so his models could run on these early computers. Yet, by being simple, the results could be understood and tested. His application of these simple models to the pressing problems of today was insightful.

After graduating with a degree in physics over 30 years ago, I chose a career in atmospheric science over particle physics. I always worried about how my applied physics was viewed by mainstream physics colleagues. With a Nobel prize in physics under our discipline's belt, it gives me and climate modeling colleagues the credibility and recognition we have yearned for: climate science is real science. [Boldface added]

Contrary to what Forester asserts, the positive water vapor feedback amplifying the modest warming from carbon dioxide (CO2) has not withstood the test of time. With data going back to December 1978, we now have comprehensive measurements of temperature trends in the atmosphere. The amplification of atmospheric temperature trends over the tropics from an increase in water vapor as predicted in the climate models is not occurring. If the atmosphere is not warming significantly, greenhouse gases cannot cause significant surface warming.

In Table 5, cited above, Manabe and Wetherald estimated that with a change in CO2 from 300 parts per million volume (ppm) to 600 ppm, with fixed absolute humidity temperatures would increase 1.33 °C with average cloudiness and 1.36 °C with clear skies. With fixed relative humidity the increase in temperatures from an increase in CO2 from 300 to 600 ppm is 2.36 °C with average cloudiness and 2.92 °C with clear skies.

Since its inception, the UN International Panel for Climate Change (IPCC) has used 3 °C plus or minus 1.5 °C for its six assessment reports, though sometimes raising the lower bound. Table 5 illustrates that the UN IPCC chooses the most extreme estimates and cannot be depended upon to accurately report all the science involved.

[The annual carbon dioxide data reported by NOAA Global Monitoring Laboratory (with data from March 1958 through April 1974 obtained by C. David Keeling of the Scripps Institution of Oceanography) start in 1959 with a mean of 316 ppm, the 2020 mean was 414.]

From Bias to Balance? Writing for the Global Warming Policy Forum, Engineering Professor emeritus Michael Kelly has a lengthy review of a new book by Professor Jason Scott Johnson of the University of Virginia Law School. The review of Climate Rationality: From Bias to Balance begins:

"Of all the dozens of books I have read about climate change, this book is the most forensic in its analysis of the public debate, the policy formation processes and indeed the scientific process itself. The author is a Professor of Law at the University of Virginia Law School. In places, the book is a deep dive, which repays the effort needed to confirm the conclusions reached. In other places it is an easier read. It retreads much of the territory covered by Steven E. Koonin in his book 'Unsettled: What Climate Science Tells Us, What It Does not, and Why It Matters,' but with different emphases – for example, a much more detailed look at the legislative processes in the USA on environmental matters.

"There are two long sections: (i) The costs of precautionary policy and (ii) The other side of the story: the structure, process and output of the climate science assessment institutions and the science they neglect, and a short third section (iii) Towards rational climate policy.

"I found the conclusions of each section quite compelling. This review consists of the last paragraph of most of the chapters, from which the reader can form a direct opinion."

Additions and Corrections: Last week's TWTW went out with editing errors. Ken Haapala sent it while traveling and having trouble with his laptop and cell phone mobile hotspot. We will try to avoid such errors in the future.

NO TWTW NEXT WEEK: Attending the 14th International Conference on Climate Change presented by The Heartland Institute on October 15 to 17, 2021, at Caesars Palace in Las Vegas to present the 2021 Fredrick Seitz Memorial Award and to learn from an array of distinguished scientists including members of SEPP.

Number of the Week: 0.12 °C per Decade over oceans. According to data collected by the Earth System Science Center, UAH, the linear warming trend since January 1979 is +0.12 C/decade over the global-averaged oceans. This may be a better, but not perfect, measure of the influence of greenhouse gases than global data which includes data over land masses that may be influenced by other human activity.

The Science & Environmental Policy Project began in late 1990 as a research effort by atmospheric physicist S. Fred Singer and a handful of graduate students working out of a small office in downtownWashington, D.C.The Project had two goals: (1) to gather material for a book on global environmental issues,and (2) to conduct a survey of scientists affiliated with the UN Intergovernmental Panel on Climate Change to determine the extent of what was, even then, being touted as scientific "consensus" on global warming.

What the graduate students discovered with their survey convinced Dr. Singer to set his book aside and instead to circulate among senior members of the American Meteorological Society a "Statement by Atmospheric Scientists" on greenhouse warming, which was quickly endorsed by 46 leading climatologists and atmospheric physicists (and eventually by nearly 100). That statement, issued on February 27, 1992, drew widespread media attention and was cited more than 150 times in the press. It was the first inkling journalists had that there was no scientific consensus on the reality of a global warming. Indeed, there was raging debate.

The Science & Environmental Policy Project was incorporated in the state of Virginia in 1992, and established as a nonprofit, 501(c)3 educational organization in late 1993.Today, having expanded from that core of 46 scientists, it draws on an international network of some of the finest minds in science who donate their time to promoting sound, credible, peer-reviewed research as the only basis for the health and environmental policies that affect us all.

You can help in two ways:

1. Download SEPP reports, press releases, and articles and pass them on – to newspaper editors, journalists, educators, civic leaders, and others. Help stop the fearmongering and the distortion of science.This is the most important thing you can do.

2. Support SEPP with your tax-deductible contributions. The environmental pressure groups, which present so much wrong information, have a combined clout of more than $1 billion a year.The Science & Environmental Policy Project has had far-reaching impact on less than one-hundredth of one percent of that figure. It's money well and effectively spent.

Send your contributions to:

And thank you.

There Can Be Too Much "Green" Energy – Lessons of Europe Right Now

By Frank Lasee

Dear Citizens:

I am a former state senator and was part of Governor Walker's administration in Wisconsin (combined service - 2011 to 2018)

I now provide information on energy and climate. They are tough topics. I am here to help with sound information.

I provide a highly regarded PowerPoint presentation on energy and climate entitled, "Where does our electricity come from?" All my audiences say it is interesting and worth seeing. Let's schedule a time. (Frank Lasee, President of Truth in Energy and Climate; www.truthenergyandclimate.com)

I provided a highly regarded PowerPoint presentation on energy and climate entitled "Where does out electricity come from?" All my audiences say it is interested and worth seeing,

There are many misconceptions that are being used to drive policy that have real world, very negative consequences.

According to NOAA, the official temperature record keeper of the United States, average temperatures in the US are up just 1.56° Fahrenheit in the last 100 years. Largely because winters are less cold.

The world has been gently warming since about 1825. Which corresponds with the end of the Little Ice Age (pre-industrial times) and predates man's small contribution to the earths modest carbon dioxide increase. By the way, water vapor is the most abundant, important, impactful, greenhouse gas, according to NASA.

Highlights:

• Europe is turning to coal as wind takes a vacation.

• Supplies are down because stockpiles are down – they fooled themselves into thinking they don't need stores of coal and natural gas.

• China is using more and more coal, natural gas and oil, causing shortages elsewhere.

• If the European winter is cold, (which is likely as the Le Nina event causes colder times) they will run out or very low of critical coal and natural gas.

• Only 3.3% of total world's energy comes from wind and solar, after trillions are invested.

Energy crisis causes switch back to coal

By Alice Haine, London, 9/24/2021

European utility providers are preparing to switch to alternative energy sources to meet demand, including carbon-rich coal, as gas supply problems continue, analysts have said.

If energy providers are forced to compete for the limited amount of gas supply, prices will continue to soar with costs "inevitably" passed down to consumers.

"The long and short of it is that, unless there is a mild winter or an ease in demand, the EU utilities will have to look to alternative energy sources to meet the demand," said Slava Kiryushin, global head of energy at DWF, an international provider of legal and business services.

"While most may read 'alternative energy sources' as "renewables", the energy market may have an alternative definition: coal,"

While upping coal production will not be welcomed by many as Europe looks to lower its carbon emissions to meet climate change targets, it is a far more economic source of fuel, Mr. Kiryushin said.

"It remains to be seen how the European utilities will balance the rise in carbon emissions and consumer sentiment against the unavailability or unaffordability of power from less carbon-intensive sources."

European coal for lined up for delivery next year rose to its highest level since 2008 on Friday, on strong demand from power stations and low stockpiles.

Coal for Amsterdam, Rotterdam and Antwerp gained 2.6 per cent to $137 a tonne, as soaring natural gas costs are continuing to push European utilities toward coal-fired generation.

Coal will not entirely solve Europe's energy woes

However, coal does not entirely solve the continent's energy crisis as exports of the commodity from Australia, South Africa and Colombia remain hampered by the pandemic and supply chain challenges, compounding the effect of low Russian supply.

"Stock levels across Europe are low and as on the gas market, coal supply from Russia has fallen lately," trading group Energi Danmark said.

The European Commission is developing a "toolbox" of initiatives to help the economic bloc tackle surging energy prices.

However, several countries are already applying national measures to protect consumers from a sharp rise in bills with Spain, Italy, Greece and France rolling out action such as subsidies and price caps in a bid to shield consumers from rising costs. (Frank's comment – Price controls always cause shortages or get ignored. The Hawaiian state government tried this with gas price controls. The price controls didn't work and the gave up.)

On Friday, Iberdrola's chief executive Ignacio Galan said the situation would normalise in five to six months, however, benchmark gas prices have more than tripled this year.

With Europe's energy crisis dragging on, margins for next year are also starting to favour coal-fired power, spurring utilities to restock.

With power generation from renewables not able to "meet the peak demand that a cold winter could create", Mr Kiryshin said it would be "near impossible" to create sufficient additional generation in such limited time. (Frank's comment – What if the wind stops blowing again in the dead of winter? Wind is often down or non-existent when it hottest or coldest, when electricity demand is the highest. Europe is in a pickle of their own making.)

"The next three to four months may lead to unexpected consequences for all industries with a particular hit being taken by those that are energy intensive," he said.

UK also turns to coal-fired power stations

Britain has also been forced to run coal-fired power stations to secure energy supplies, electricity generationcompany Drax said.

The country is particularly exposed to Europe's energy crisis due to its reliance on natural gas to generate electricity with the price of European gas futures more than doubling since May.

"These facilities have fulfilled a critical role in keeping the lights on at a

'Silent Earth' *cont. from page 1*

Europe and the USA of deadly malaria, and now protect crops that require so much land, water, work, fertilizer and energy to grow and harvest that we dare not sacrifice them to hordes of hungry insects.

Carson falsely blamed DDT for her cancer – and launched the practice of using conjecture, poetic prose, hyperbole and even fraud, instead of evidence-based science, to advance environmentalist agendas. The Environmental Defense Fund used her book to drive its campaign to ban DDT and give environmentalists "a level of authority they never had before."

The EPA ban led to the deaths of millions of Africans and Asians from malaria, which could have been

reduced dramatically by using this powerful spatial repellant in conjunction with modern insecticides and anti-malarial drugs. (See here, here, here and here.)

Relying mostly on inventive speculation, Goulson claims a silent spring devoid of chirping birds could soon become a silent planet devoid of insects that pollinate flowers and crops, and feed birds, amphibians, reptiles, mammals and (if former UN Secretary-General Kofi Annan has his way) billions of us humans.

It would take another book to address all the new book's errors and problems, but here are a few.

Goulson transforms the supposed "bee-pocalypse" of a few years ago into a global apocalypse for all insects, and potentially all life on Earth. He blames modern agriculture, "greedy corporations," free-market/personal-choice capitalism, too many humans who eat too much and live too well, urban light pollution and o course manmade climate change. Above all, he blames modern synthetic pesticides, though he does recognize that many "natural" "organic" chemicals are toxic to insects, wildlife and even humans.

Honeybee populations have been on a happy rebound for several years now, after being hit hard by Varroa destructor mites, Nosema, and other bee parasites and diseases. They were also harmed by beekeepers who tried to address these problems, but sometimes misused or overused mitacides. US Department of Agriculture surveys now show there are now over 150,000 more beehives than in 1995.

Studies in actual farmers' fields have consistently shown no adverse effects on honeybees at the colony level from realistic exposures to neonicotinoid insecticides, one of Goulson's primary scapegoats. In fact, bees thrive in and around neonic-treated canola, corn and other crops in the United States, Canada, Europe and elsewhere. As to wild bees, 98% don't even pollinate agricultural crops – and the species that do are thriving, even though they have the greatest contact with neonics. That shouldn't be surprising.

Neonicotinoids are used primarily to coat seeds. They are systemic pesticides that become part of the plant tissue and target only pests that actually feed on the crops, particularly during early growth stages. Sulfloxaflor is similar in that regard. Both are far safer for general insect populations than older pesticides or organic farming chemicals that are applied by air, hand or truck across entire fields – and often beyond.

Goulson ignores all this and advances his central claim that populations of all insects are in precipitous decline globally. He bases that largely on a 2017 study by him and several colleagues. They assert that insect populations plummeted by over 75% during a 25-year period in several German nature reserves – then extrapolate that and a few other studies to the entire planet.

But their study didn't track the same areas from year to year and employed traps that capture insects only while they're flying. That misses non-flying insects and is heavily dependent on rainfall and other weather.

There's simply no reliable evidence of a general insect decline. Indeed, some 900,000 insect species have been identified around the world, though total estimates range from 2 million to 30 million species. That and extremely limited monitoring programs make it impossible to calculate global insect population trends. Moreover, an extensive insect population study published in 2020 found no overall decline in North America, with declines in some US areas offset by increases elsewhere. The verdict is still out.

Goulson also claims modern pesticides are vastly more toxic than their predecessors. However, an Agriculture Department analysis concluded that, between 1968 and 2008, overall US pesticide toxicity plunged by 98% – while the amount of pesticides (insecticides and herbicides) applied per acre declined by 60% and pesticide persistence in soils and waters was cut in half, as farmers used different, better, more-targeted pesticides more carefully and judiciously, and employed other measures to control pests.

He pillories glyphosate, the active ingredient in the herbicide Roundup, claiming the chemical is harmful to bees, has been linked to other insect and even bird declines, and causes cancer in humans. For evidence he cites the International Agency on Research and Cancer.

But as I explain in a medical journal paper, IARC has strong ties to American trial lawyers who have filed multiple lawsuits over glyphosate – and the agency's claims have been roundly contradicted by a decades-long US National Cancer Institute Agricultural Health Study – and by more than 3,300 studies around the world that support glyphosate safety. Reliance on IARC puts Goulson on very thin ice.

He's against synthetic fertilizers (and more CO2) that help us grow far more food from much less land – because they can allegedly reduce floral diversity, make other plants less palatable for insects, pollute aquatic systems and contribute to climate change. He wants children to learn more about ecology and nature in school (presumably only his lesson plans) – and applauds the UK's Extinction Rebellion lunatics.

These errors, omissions, exaggerations, falsifications and biases shouldn't be surprising. A widely published biology professor, Goulson is also a trustee for Pesticide Action Network, an ideologically driven anti-pesticide organization.

Goulson's proffered solutions to his imagined insect Armageddon are equally fanciful. While acknowledging that organic farming uses nasty chemicals and produces 80-90% lower yields than conventional modern agriculture, he wants still more organic farms – even though plowing billions more acres for the same overall crop yields would have horrific impacts on insects and wildlife.

With millions of jobs disappearing, he says the newly unemployed could work on organic farms, in backyard plots and in urban community gardens (doing stoop labor, pulling weeds and picking bugs off vegetables). Ruling elites wouldn't do such work, of course, but we commoners should.

Amid his concerns about climate change, the author likewise ignores how industrial-scale wind turbines would splatter birds and insects, solar panels would obliterate habitats, and converting forests into wood pellets for "biofuel" electricity generation would destroy still more habitats. Mining and processing for Green New Deal metals and minerals would drastically harm people, insects and planet.

Ultimately, Goulson concludes, we need fewer people, who eat less and "switch to a predominantly vegetable diet, supplemented by small amounts of sustainably-harvested fish and grass-fed meat" (and bugs). Ruling elites once again likely exempted.

It all looks lie part of the Green warriors' mission to stamp out prosperity as we know it.

Silent Earth will undoubtedly get rave reviews from environmentalists, leftist journalists, Big Tech, teachers unions, and the rest of the Cancel Culture. The insanity will get foisted on our children. Parents and policymakers should be wary.

Paul Driessen is senior policy advisor for the Committee For A Constructive Tomorrow (www.CFACT.org) and author of many articles on the environment.

Use of force expert: Kyle Rittenhouse's decision to shoot rioters was 'justified'

By WorldTribune Staff, October 10, 2021

Kyle Rittenhouse's decision to shoot three rioters in Kenosha, Wisconsin last summer was "justified," a use of force expert said at a pre-trial hearing on Tuesday.

"A citizen in that position, given those indicators, would it be reasonable for them to believe they were about to be assaulted?" said use of force expert John Black, National File reported on Oct. 9. "I would argue yes."

Black testified that he spent hours analyzing the shootings and the events leading up to them. Rittenhouse, who was 17 at the time of the shootings, is facing homicide and other charges for shooting Kenosha rioters Joseph Rosenbaum, Anthony Huber and Gaige Grosskreutz on Aug. 25, 2020. Rosenbaum and Huber were killed while Grosskreutz was wounded after being shot in the hand.

According to reports from the scene in Kenosha, Rittenhouse fatally shot 36-year-old Rosenbaum. According to the criminal

complaint, the medical examiner found that Rosenbaum was shot in the groin, back and hand. He also suffered a superficial graze wound on his left thigh and a wound to the side of his head.

Black testified that video footage shows Rosenbaum chased Rittenhouse and reached for the teenager's gun. Rosenbaum can be seen chasing Rittenhouse and yelling "shoot me ni**a" as the teenager tries to run away. Another video shows a rioter firing a handgun into the air as a crowd chases Rittenhouse, proving that Rittenhouse did not fire the first shot.

Black testified that, based on the video footage, Rittenhouse had reason to believe Rosenbaum intended to grab his weapon and use it on him, justifying Rittenhouse's decision to shoot. "Now the firearm is a potential weapon for both parties," Black said. "Now we have a potential wrestling match."

Huber, 26, was shot dead while attempting to beat Rittenhouse with a skateboard. Rittenhouse was being chased by a leftist mob when he tripped and fell. At that point, Huber bashed him in the back of the head/neck with a skateboard. Rittenhouse shot Huber in the chest.

Grosskreutz, 26, had his arm partially blown off after he rushed at Rittenhouse, who had just tripped and fallen while being chased. Grosskreutz had a gun in his hand when he approached Rittenhouse.

Regarding the shooting of Huber, Black concluded that Rittenhouse's decision to shoot was reasonable. A video released not long after the shooting shows Huber hitting the teenager over the head with a skateboard while attempting to grab his rifle.

Moments after Huber was shot, Grosskreutz can be seen approaching Rittenhouse. He initially put his hands up, but then raised a handgun. Rittenhouse then shot him in the bicep. Black considered the use of force against Grosskreutz, who later remarked that his only regret was "not killing the kid", justified as well.

Black also testified that Rittenhouse maintained control of his gun and was not aimlessly shooting at the crowd.

Rittenhouse's lead attorney, Mark Richards, is trying to persuade Kenosha County Circuit Judge Bruce Schroeder to let Black testify at the trial in November. Schroeder is holding off on making a decision until he also hears testimony from a prosecution expert on use of force on Oct. 25. The trial is scheduled to being Nov. 1.

The judge also declined to drop a weapons charge against Rittenhouse, though he said he is open to revisiting the matter.

The Coming Civil War

cont. from page 1

"The prayers of both could not be answered; that of neither has been answered fully. The Almighty has His own purposes." Lincoln was telling America that while God's plan was unfolding, men still held the destiny of the country in their hands.

One year ago, there were young people in the city of Kenosha, Wisconsin burning American flags and shouting, "Death to America!" Another young woman was outside the Kenosha County Courthouse shouting "Kill the F*&!@#g police!" while holding an American flag. This wasn't Syria, Baghdad, or Caracas. It is taking place in America. Portland has been home to leftist extremist violence, burning, and looting. Violent domestic extremism is on the rise as the radical left smells blood in the water and salivates at the thought of America as an easy target with its law enforcement defunded and its incredible history erased.

The election map showing the results from November 3rd reveals a sea of red punctuated by small blue dots representing decaying cities run by Democratic mayors and infected by liberal policies. Their objective is to overthrow the country because of the abominable Third World conditions their own policies have sentenced them to. They know no better. Cities and states all over the country are allowing the violent, aggressive, "peaceful" Democratic mobs to occupy and destroy vital sections of their cities and states in order to achieve a higher good—the overthrow of capitalism and the evil United States of America.

Democrats, liberals, and those who paid handsomely to be indoctrinated in the dark spider holes of liberal American universities have desperately tried to cling to the lie of "white privilege" and the fabrication of "institutional racism" in order to stoke anti-American sentiment and help destroy the very country credited with setting in motion—at great cost—the abolition of slavery around the world. Rioting and looting enables the Democrats to point to the unrest and destruction in the country as an excuse to put our current model of government and our Constitution in the dumpster and replace it with something more "fair." Communism and socialism—which, a mere generation ago, were the equivalent of treason—have become mainstream political platforms within a Democratic Party that has lost both it compass and its sense of non-revisionist history. They have become a self-fulfilling prophecy. In the 2012 film "Lincoln" starring Daniel Day-Lewis as President Abraham Lincoln, the president tells a story which casts well the state of things today. "I heard tell once of a Jefferson City lawyer who had a parrot that would wake him each morning crying out 'today's the day the world shall end as scripture has foretold'," Lincoln said. "And one day, the lawyer shot him for the sake of peace and quiet I presume, thus fulfilling, for the bird at least, his prophecy." This waggish parable portends 2021 America, and more and more Americans are coming to the realization that a country which through off its government yoke by revolution and now under assault by multiple fictions such as institutional racism, white privilege, and anthropogenic global warming may have to be preserved in similar fashion.

Climate change nonsense has become a convenient excuse for the dismantling of capitalism. The nonsense and hypocrisy underpinning the radical BLM movement is laid bare for all to see when it becomes apparent that they do not care at all about black-on-black crime. Democrats, it seems, have not been this upset since Lincoln freed the slaves.

Corporations—bludgeoned by the cudgel of political correctness—began falling on the sword of institutional racism. Fear of the Deep State runs deep as millions blacked out their social media page to protest a police massacre of innocent black lives that wasn't taking place. The soft bigotry of woke, white paternalism has caused millions of black Americans to raise their eyebrows and why it is so many liberals think they cannot survive without a white helping hand. Black authors like Jason Riley had to resort to writing books like, "Please Stop Helping Us: How Liberals Make It Harder for Blacks to Succeed." Pressured by the new digital slave owners, millions of white Americans remain silent as the country is slowly dismantled. The cynical virus of anti-American racial redress has burrowed itself deep into the vital tissue of our culture without a shred of probative evidence and without a shot being fired.

But America is not ready to raise the white flag just yet. Many Americans are braving the "racist" placard, which is hung around the neck of anybody and anything that threatens the movement to tear down America. They are pushing back against the circular logic of a Marxist BLM movement which claims blacks are victimized by institutional racism and police bias. If you contest the premise in the slightest, they claim it is more evidence of racism and injustice. This is a logical fallacy in which the reasoned begins with an assumption that what you are trying to prove is already true.

Millions of Americans are ready to stand up for and even fight for the America loved by a Ronald Reagan who said, "Keep voting Democrat. One day you will restrict your freedoms, restrict your history, and restrict your safety; all in the name of professional victims who don't understand the consequences of their ignorance." The sea of red on the election map represents an armed camp with over 8 billion rounds of ammunition. For the most part they are peaceful, owners of businesses, hard-working, and pretty much minding their own business. But they are tired, and very, very concerned about the future of their country. The last war between factions, in four years, resulted in over 700,000 dead. Nobody wants a repeat. But we do appear to be repeating history.

In his 1865 Second Inaugural Address, President Lincoln described a factious political climate that sounds remarkably similar to the one we are living in today. "Both parties deprecated war; but one of them would make war rather than let the nation survive; and the other would accept war rather than let it perish", he said. The fight to preserve freedom in the face of political and social tyranny is a fight that has been fought—and lost—by many other countries. The American experience is an experiment in freedom. Equality of opportunity; not equality of outcome is guaranteed.

American liberty is a risky concept. The right to free speech is a rare privilege enjoyed by all Americans—perhaps even a little too much. Americans have the right to speak of for what they believe is right and voice opinions often unappreciated by the mainstream. No matter the unpopularity of their convictions, Americans can take the comfort that their words are protected by our most precious founding document. Bu What makes liberty dangerous is the fact that humans are sinful and flawed creatures. Freedom is a gamble; and one undertaken by the American experiment. Our experience has taught us, however, that the risk is far outweighed by the reward. When factions threaten the reward, it is time to fight back.

The benediction punctuating the end of Lincoln's Second Inaugural Address is a prayer that our country today is in dire need of praying: "With malice toward none; with charity for all; with firmness in the right, as God gives us to see the right, let us strive on to finish the work we are in; to bind up the nation's wounds; To do all which may achieve and cherish a just, and a lasting peace, among ourselves, and with all nations." We must realize that we are already in a war. The first shots have already been fired. If we can't see that, we are destined to lose. If we can, there should be no shame in acknowledging that we readily accept war—as a last resort—rather than let our country perish or go the way of Venezuela. It is our duty to resist and fight against tyranny and socialism. Freedom at any cost. Not a selfish freedom – or simply the freedom to do as we choose; but an empowering and productive freedom that is the opportunity to do what is right.

Truth-Telling Glasgow

continued from page 4

accuracy, COP26 should be rebranded "Cut Our Power 26".

It's also time for truthful climate models. Even with sneaky revisions of past records and reinvention of the Hockey Stick, the model forecasts have been wrong for over 40 years – there is no dangerous global warming.

It's also time to bury the myth that "the science" supports global warming alarm. Hundreds of thousands of qualified and experienced scientists have joined sceptic lists over many years.

The Glasgow tourists should take a pre-COP trip to cold Norway where yet another group of sceptical scientists will launch at the University of Stavanger on the 12th of October.

Maybe they will get a chance to take pictures of iced-up wind turbines or snow-covered solar panels. However the one-eyed media probably prefers pictures of immature school girls chanting slogans and blocking roads?

It looks likely that Glasgow will kick some spectacular own goals. Only an incompetent alarmist would organise a Global Warming meeting in cold Glasgow, with winter approaching and with threats of food, electricity and fuel shortages. Maybe Boris is secretly on our side?

Airlines Are Ready

cont. from page 1

It's fall, and the establishment push to make the unvaccinated the New Lepers is starting to hum. Banishment from essential services is a crucial weapon in the campaign. And the federal government and airline industry are ready to roll.

A thoroughly alarming article posted at the system-aligned news site Politico on Sept. 15 spells things out with cold clarity. Former Obama administration Transportation Secretary (and ex-Republican member of Congress) Ray LaHood:

...says the White House should push airlines to put a vaccine mandate on airline travelers in place. If the airlines refuse, LaHood said, the White House should do it itself. What's more, he contends it wouldn't be a heavy lift operationally.

Keep that word "operationally" in mind. For as we shall see, the machinery has already been put in place to enact just such a ban. LaHood spoke with Politico:

"I don't think it would be difficult at all. It's no different than showing your driver's license to [the Transportation Security Administration checkpoint at the airport]," LaHood said in an interview. "I don't see it as a bureaucratic challenge to the airlines. I really don't. You got to show ID in order to get through TSA, then make it a part of getting through TSA — that you can't get through TSA unless you show proper identification, your ticket and a vaccination card."

Given the widespread overlap between the Obama and Biden administrations, such a straightforward argument for yet another dramatic drip from the COVID tyranny faucet coming from a former Cabinet-level official should be a strong indicator of where things are heading. Not so coincidentally, the airline industry is fully prepared and just waiting for word to come to implement the ban:

But private industry, in this case, appears to be waiting first for the feds to act. In a discussion with NPR, Scott Kirby, CEO of United Airlines, called vaccine mandates for travelers a "government issue," but noted the company has the means to expand a proof-of-vaccination standard.

"For us to do that, we would probably require some sort of government directive," Kirby said [Sept. 10]. "We have prepared ourselves with technology to be able to upload vaccine cards and track that and implement it if the government ever chooses to go in that direction."

If you feel like you're being set up, that's because you are. Ex-Obama officials are seeding the public soil for the Biden administration while the CEO of one of the largest airlines in the country is letting it be known that his company is ready to go whenever Team Biden is.

With Thanksgiving and Christmas rapidly approaching, what better way to stigmatize and punish the unvaccinated beyond the absolute hammers of job loss and refusal of medical services?

There are other tells. The same rigged polls that were laughably lacking in credibility throughout the last two presidential election seasons are now furiously laboring in the service of the vaccine regime. Here's the latest stunning finding from the Monmouth University Polling Service, a staple among dominant media organs:

A majority of Americans support the vaccine mandates announced by President Joe Biden last week amid rising concerns about the chance of catching Covid. According to the Monmouth University Poll, the public also supports instituting guidelines for masking and social distancing in their state as well as requiring people to show proof of vaccination for certain activities, such as boarding an airplane or going to the office. The poll finds majority support for nearly all these measures in both blue states and red states, although a significant number of people – mostly Republicans – remain opposed to getting the Covid vaccine.

Big-box business news site Forbes put a fun spin on a Harris Poll:

More than 30% of vaccinated Americans have in some way stopped socializing with friends, family members or acquaintances because they're unvaccinated against Covid-19, a new Harris poll finds, one of a number of growing consequences against those who continue to resist the shot.

It takes two to be friends, yet Forbes and Harris would have you believe that the emotional fallout of vaccine-induced social ostracism all lands in one devastating direction. Among "key findings" of the survey:

The poll, conducted September 10-12 among 1,920 U.S. adults, found a combined 33% of vaccinated respondents had in some way "cut ties or ended relationships with" at least some unvaccinated people in their lives.

Of those, 8% said they "do not intend on socializing with them again," 11% said they've cut ties but would see them again if they get the shot and 14% still speak to the unvaccinated person, but will not see them in person.

This is all about as subtle as a punch in the face, and the pressure is only going to increase as autumn drags on. The New Lepers are to be shamed and shunned. You don't get to fly, you deserve to lose your friends and family, and you shouldn't be allowed to show up for work either. And remember, you're the divisive one.

1,800+ Florida flights reportedly canceled due to vax mandate 'sickout'

By WorldTribune Staff, Oct 10, 2021

More than 1,800 flights into and out of Florida were either postponed or canceled over the weekend after air traffic controllers in Jacksonville reportedly conducted a "mass sickout" to protest the federal Covid vaccine mandate.

Big Media propagandists lined up behind an alternative explanation suggesting the outages were due to bad weather or active military training in the airspace.

Journalist Leland Vittert tweeted: "Airline sources: mass "sickout" @FAANews center in Jacksonville — caused ripple effect and 1000+ flight cancellations mostly effecting @SouthwestAir — report "sickout" protesting #VaccineMandate"

According to Flight Aware, Saturday saw some 800 cancellations. Sunday morning saw more than 1,000 flights canceled.

A union representing pilots at Southwest Airlines is suing to stop the federal vaccine requirement from being forced until a lawsuit is resolved.

"The new vaccine mandate unlawfully imposes new conditions of employment and the new policy threatens termination of any pilot not fully vaccinated by December 8, 2021," the union's legal representatives said in a court filing. "Southwest Airlines' additional new and unilateral modification of the parties' collective bargaining agreement is in clear violation of the RLA."

According to the guidelines set out by Joe Biden (and "voluntarily" embraced by most of the major airlines), Southwest has a deadline of Oct. 4 under the federal mandate for employees to get jabbed or have an approved medical or religious exemption. Southwest is affected by the mandate because it has contracts with the federal government (like many large businesses).

It was also reported (and ignored by corporate media) that pilots had also participated in the weekend's "sickout."

"When hundreds of pilots and air traffic controllers don't come to work, it's a safe bet that the flights were canceled due to a lack of pilots to fly planes and air traffic controllers to direct planes," 100percentfedup.com reported.

Southwest Airlines blamed the mass cancellations on "ATC issues and disruptive weather."

Passengers were furious and letting Southwest have it. The 100percentfedup report cited some as saying:

"Bull. Your own employees working at the gate in the airport told everyone standing there that cancellation was due to employee protest of the vaccine mandate"

"This is absolutely horrible! Your lack of compassion & resolution is appalling! My sister has been left stranded in Atlanta while traveling en route to my Wedding scheduled for tomorrow. I am now driving round trip from FL to ATL on the EVE of my wedding!!"

"Keep lying when your staff at Midway specifically told us it was because the Pilots went on strike, because of your vaccine mandate. Now we missed a wedding and our luggage is stuck at midway with mine and my wife's medication."

Others noted there appeared to be a media blackout about the "sickout."

There was confirmation that Jacksonville was short-staffed on air traffic controllers.

EXCLUSIVE – 80% of Covid-19 deaths in August were people who had been vaccinated according to Public Health data

By The Exposé, Sept 8, 2021

Further evidence proving the Covid-19 vaccination programme is a huge failure has been released which confirms throughout the whole of August 80% of the people who allegedly died of Covid-19 had been vaccinated against the disease.

We're living in strange times, and if you believe the Covid-19 vaccination programme is working because the authorities on the television tell you that it is, then you must surely find it extremely strange that the UK is in the middle of a third wave in the middle of summer? Especially when you consider that in summer 2020 Covid-19 deaths flat-lined to zero even though a Covid-19 injection was not available.

But the strangeness doesn't end there, just take a look at the latest Covid-19 Statistical Report released by Public Health Scotland (PHS) on the 8th September 2021.

The report provides an array on data on testing, quarantining, vaccinations, cases, hospitalisations, and deaths but it doesn't get very interesting until you read Table 15 which covers the number of Covid-19 positive cases by week and vaccination status.

Interesting because it shows that the majority of confirmed cases are now among the vaccinated population. In the most recent week from 28th August to 3rd September 2021 the report shows that there were 20,744 confirmed cases among the unvaccinated population, who are more likely to be tested for the simple reason they have not been vaccinated.

But it also shows that there were 5,508 confirmed cases among the partly vaccinated population, and 16,810 cases among the fully vaccinated population – two populations who are least likely to be tested due to be being vaccinated.

This means that between 28th August and 3rd September there were 22,318 cases among the vaccinated population – almost 2,000 more than the unvaccinated population.

The same can also be said for the week of 21st August to

GOVERNMENT CIRCUS

Wisconsin voter group: 23,000 voters in one county with same phone number

By WorldTribune Staff, September 24, 2021

A voter integrity group in Wisconsin is demanding state elections officials explain how 23,203 individuals in Racine County registered to vote using the same phone number.

The group, H.O.T. Wisconsin (Honest, Open, Transparent), also noted in a Sept. 22 Telegram post that there over 8,550 voters in Racine County listed as registering in the year 1918. Another 900 registered voters in the county have the exact same address.

"We demand your immediate resignations for lying to us all about the happenings of the November 3, 2020 election," the group said in the post addressed to the Wisconsin Election Commission (WEC) and the county clerks for Racine and Rock counties.

"Why are there 23,203 voters registered right now in Racine County all with the same phone number? There are another 63 registered statewide with this same number. Why didn't you know this? The same 23,263 were registered last year on your voter registration list proving you didn't even know," the group said. "A list will be mailed to the Board. Tell us when it was assigned to each of these 23,203 voters in Racine County…with more voters across the state."

The group continued: "SIX commissioners: did you know there are 543,000 on your list without a date of registration? Why not? What steps are you taking to correct this major error? A database is not run like that, in particular one which is used for casting votes. The source for all this information is WEC's own database. End WEC now! It has been a complete failure and absolute mess. They have constantly violated state statutes and citizens constitutional rights.

The group has not yet received a response from the state.

"It's doubtful Republican Speaker Vos will do anything. The people of Wisconsin will have to uncover the fraud in Wisconsin themselves," Gateway Pundit's Joe Hoft noted.

Maricopa officials at congressional hearing confirm deleting election data after subpoena

By WorldTribune Staff, October 8, 2021

Maricopa County officials admitted on Thursday that they deleted election data that they had previously failed to turn over under a subpoena ordered by the Arizona Senate as part of its audit of the county's 2020 election.

Under questioning from Arizona Republican Rep. Andy Biggs during a House hearing on election integrity, Bill Gates, the Maricopa County Board Vice Chair, admitted that Maricopa officials had deleted the files. Gates said the officials first archived the files and then deleted them.

When Biggs asked why the archived records were not turned over to the audit under the subpoena ordered by the Arizona Senate, Gates told the hearing on Thursday it was because the subpoena didn't specifically ask for archived files.

"Is it standard practice to delete files off a server after an election, Mr. Bennett?" Biggs asked.

Ken Bennett, who served as president of the Arizona Senate and as the 19th Secretary of State of Arizona, responded, "I hope not."

"Mr. Gates, would you agree with that?" Biggs asked.

"I would say that it's appropriate to maintain files, and that's exactly what we did," Gates responded. "The deleted files have been discussed, and they were archived."

Biggs noted: "So you admit that you guys, Maricopa County, did delete files off the server after the election?"

"That were archived," Gates said.

Biggs asked: "Yeah, and so when you released the servers and this information to the auditors, to begin with, they didn't have access to the deleted files, is that correct?"

Gates responded: "They didn't subpoena those that's correct."

Biggs fired back: "So you didn't feel obligated to turn that over, then, is that correct?"

Gates replied: "We responded to the subpoena."

Bennett then responds: "I find it frankly laughable to suggest that a county, in response to a subpoena could say 'we will delete files from the hard drives and materials that we give to the auditors because we have those files archived on data that we did not give to the auditors when the subpoena said to turn over all the records related to the election.' "

Maricopa County Board of Supervisors Chairman Jack Sellers said: "I just know that because there is limited space on these servers when you have to run another election then you have to make room for the additional election data."

Investigator Ben Cotton has noted that files were deleted by those involved in the election the day before the machines were to be handed over to the audit team. Cotton noted that his team was able to identify the time stamps for when the files were deleted and altered by Maricopa County officials.

"We have captured screenshots of Maricopa County people at the keyboards during those time periods," Cotton said.

Switch back to Coal

cont. from page 7

time when the energy system is under considerable pressure," Drax said.

Drax, which owns the nation's biggest facility in Yorkshire in northern England, had planned to switch from coal to biomass this year to help tackle climate change.

The group could now extend the use of coal, chief executive Will Gardiner said.

"We're very aware that the country might have a significant problem and if there's something Drax can do we will absolutely think about doing that," he said.

Any delay could complicate Britain's plans to scrap coal-powered electricity generation by October 2024, as Prime Minister Boris Johnson's government seeks to reduce Britain's carbon emissions to net zero by 2050.

Wholesale gas prices fall as Norway increases flows (Frank's comment – Norway has a new government that is considering whether to phase out fossil fuel production.)

There was some respite for gas suppliers on Friday with British and European wholesale gas prices falling for a third straight day as Norwegian gas flows increased, alleviating some concerns over tight supplies this winter.

Norwegian flows to Europe stood at nearly 318 million cubic metres on Friday morning, up from 289 mcm on Thursday, Refinitiv data showed.

"On the short end of the curve, increased supply from Norway and some very windy autumn weather in Germany has limited the need for gas, but the low storage levels and the ongoing concerns about Russia and the Nord Stream 2 pipeline continue to cause some uncertainty. Nonetheless, the market appears to fall further early Friday," said analysts at Energi Danmark in a morning note.

From October 1, commercial flows will start on the 724-kilometre North Sea Link, the world's longest sub-sea power cable, connecting British and Nordic power markets for the first time.

Supply will initially be limited to about half of its 1,400-megawatt capacity, with plans to gradually increase to full output by the start of next year.

A high pressure gas pipeline which runs through the Cheshire countryside in England. Rising prices of natural gas in the UK are putting Britain's energy sector under pressure. Getty Images

For Norway, the timing is less of a boon, with a dry summer causing a huge deficit in its traditionally plentiful hydropower resources. Low reservoirs at home will limit producers' ability to export power to Britain. and mainland Europe to slightly more than a third of maximum capacity this winter, said Olav Johan Botnen, a senior analyst at Volue Insight.

"Almost all of that export will go to the UK this winter, as we expect prices there to be higher than in the rest of Europe," he said.

Norway is already connected by sub-sea cables to Germany, the Netherlands and Denmark, however, tempted by high power prices in Europe this summer, Norwegian hydro producers exported more electricity than usual, while less rain than normal curbed inflows to reservoirs. That left the Nordic region with a 22 terrawatt-hour deficit, Volue Insight data showed.

Even with reduced capacity, the interconnector can still help the UK tackle the extreme prices with recent tests on the cable indicating it can alleviate or exacerbate the pricing situation, depending on the direction of test flows.

Britain faces bleak winter

However, Britain will face a "tough winter" if temperatures are colder than normal, Mr Gardiner said.

His comments echo the words of analysts as well as Britain's Business Secretary Kwasi Kwarteng who also predicted a "very difficult winter" for many people in Britain because of surging fuel prices.

Stock markets flashed red on Friday as the energy crisis coupled with soaring inflation and supply chain problems indicated the difficult times ahead for consumers, who face a higher cost of living through the colder months.

The regionwide STOXX 600 index slipped 0.78 per cent on Friday after a three-day run of gains, while Britain's FTSE 100 also weakened as more gas companies looked likely to go bust and UK energy suppliers warned that some consumers would struggle to afford to heat their homes.

"Persistent and rising inflation would suggest that central banks have to act soon to get the situation under control, which means interest rate hikes sooner rather than later. There is a bleak winter ahead given pressure on energy prices, supply chain problems and a sharp hike in the cost of living," said Russ Mould, investment director at AJ Bell.

"All these factors threaten economic growth, so central banks have a fine line to tread – raise rates too quickly and the economy could falter, but don't act and risk inflation racing away."

The disused framework of the storage tank at a former gasworks in Brighton, UK. Rising prices of natural gas in the UK have pushed several energy suppliers out of business this year. Getty Images

With utility companies who had not already bought their gas now being forced to pay more for it than they promised to sell it for, six UK energy suppliers serving about 1.5 million households have gone out of business this month.

Energy companies' pleas for help from the UK government fell "on deaf ears", said Peter McGirr, the boss of collapsed firm Green Energy.

The company was among the suppliers to go out of business in September with its founder and chief executive now warning that "a majority" of the 40 energy companies he has spoken to in recent days are likely to collapse without further Government support.

This morning, I updated Parliament on our work to protect consumers during the global rise in wholesale gas prices

I want to reassure you: consumers remain at the centre of our approach

Read my statement here: https://t.co/TBfGPfhHvt

— Kwasi Kwarteng (@KwasiKwarteng) September 23, 2021

UK energy supplier Symbio stopped accepting new customers on Friday citing "technical issues" following Igloo, Ampower, Utilita and Neo Energy, who have all decided to stop taking new customers.

The crisis is also hitting linked companies, such as auto-switching service Flipper, which automatically changed customers to the cheapest deal on the market and was forced to close on Thursday.

Alan Thomas, UK chief executive at Simply Business, says the rising gas prices and energy bills will ultimately affect all small business owners who are already struggling to recover from the economic fallout from Covid-19.

With SMEs already losing "an eye-watering" £126.6bn ($173.18bn) as a result of the pandemic – equating to more than £22,500 each, said Mr Thomas, whose company is one of the UK's largest providers of small business insurance, the prospect of further financial challenges will be a blow.

"We've already seen the impact of rising gas prices on larger firms – with the food and drink industry suffering in particular. Small businesses are also set to feel the consequences, and reduced levels of cash-flow and liquidity will only make things worse for many," he said.

"Why is this important? The UK's six million SMEs account for 99 per cent of all businesses and contribute trillions of pounds to the UK economy. Put simply, the UK's recovery depends on small businesses bouncing back."

In just one Michigan county, canvas finds '18 to 20 percent irregularity and anomaly rate'

By WorldTribune.comStaff, 09/29/2021

A canvassing effort in Michigan of the 2020 election found an "18 to 20 percent irregularity and anomaly rate" in Macomb County.

Jacky Eubanks, who is running for Michigan's 32nd House seat and is leading the canvassing effort, said the irregularities and anomalies were found in the 2020 vote in Macomb County, which President Donald Trump won but saw his margin of victory shrink from 2016.

In an interview with Gateway Pundit published on Wednesday, Eubanks said: "It all started with, after the election we thought, not only did funny business and fraud happen in Wayne County. Which obviously everybody knows that the city of Detroit is notoriously corrupt and ballot box stuffing happened and there's apparently 9,000 affidavits that were signed as witnesses to the fraud that took place on election day and the day after in Wayne County.

"But nobody really took a look at Macomb because Macomb went for Trump in 2020. But what I thought was interesting was that Macomb has been the bellwether county for the state of Michigan and has been one, I believe one of nine counties, who have determined who would win the presidency in every presidential election, like ever. So when Trump won Macomb but didn't win the presidency, I thought that was weird and strange because that was the first time that's ever happened, and also that his margin of victory went down. So we decided to take a random sample of absentee voters from my hometown of Chesterfield, Michigan, and just go knock on their doors and verify that the name and address on the ballot matches up with what happened in real life. And what we found was really startling. We found between 18% and 20%, it fluctuates because we're still gathering data, but we're looking at an 18% to 20% irregularity and anomaly rate based on the canvassing we've been doing this summer."

Eubanks is calling on Michigan residents to call their local representatives and demand a full forensic audit for the state's 2020 ballots. She also noted that state Republicans have tried to stop her canvassing efforts.

"Shockingly, not the Democrats, it's the Republicans who are trying to shut this down," Eubanks said. "So I had no idea that so many people did not want this canvassing effort to go through, or they don't want an audit at all. And I'm very quickly realizing, the more attention I'm getting for this canvassing effort, the more volunteers who get involved, the more events I go to where I present my findings, the more Republican politicians currently in office try to stop it."

On her canvassing efforts, Eubanks told the Gateway Pundit:

"We are going to houses, and people that we know there's an absentee ballot that was counted in their name. And then we just go to those addresses and try to see if we can talk to the voter, whose name is on that ballot. And what we've been finding is that there's a series of different kinds of anomalies. Number one is, if we go to that address, and we find out that there is nobody by that name who lives at that address, and the current homeowner will even say I don't know who you're talking about I've lived here for two years, 10 years, 20 years, and they don't know who the person that we're asking for is. And then another irregularity we have, is when we try to go to an address to verify that name and the address is not valid. For example, we had one ballot assigned to a dentist/a real estate office, we had another ballot that, well many ballots have been assigned to a gigantic apartment complex with many buildings and many numbers within each building and the addresses do not specify a building number or apartment number, so there's no way to track down to see if this person is real. Other irregularities include, we, we talked to the voter and we say did you, we ask did you vote, and they said no I did not vote in the November 2020 election, and then we say well records show you voted absentee, and then they get upset because they realize they've been defrauded and they sign an affidavit.

"The third and most mysterious kind that we found is people who swear they voted in person at the polling precinct on election day, and even recall putting their ballot into the tabulator and recall shredding their absentee ballot if it was mailed to them. Yet, there's still an absentee ballot that's been counted in their name, according to official records.

"Now keep in mind all the records we've gotten we're FOIA'd through the township, through the county, and through the state, but all this is online. We would literally need to do a full forensic audit, in order to verify these anomalies, because we're just checking them against online records, and we don't know if there's actually paper ballots and signatures to match the online records."

Eubanks said her top priority was finding out the full scope of what happened in the 2020 election so it can be prevented in the 2022 midterms and beyond.

"I can't help but think that if the Democrats got away with rigging the election in 2020, how can we ever be sure that they won't rig 2022, 2024 and every election here after," Eubanks said. "So either the current politicians don't believe there was any fraud, which I've presented enough evidence to show that there was, and plenty of other people have shown that there was through their findings. So either they don't want to see it, they don't want to look at it, they don't want to believe it or they know something. And if the audit went through something about them could come out that implicates them in a crime. Those are the only two things I can figure, but I don't know. Yeah, that's what we're dealing with."

Attorney Matt DePerno: Yes a state legislature can decertify a national election upon proof of fraud

By WorldTribune Staff, Sept. 24, 2021

According to information leaked prior to the full release of the state Senate's audit of Marciopa County's 2020 election ballots, the number of illegal ballots found in Maricopa County (more than 55,000) is more than four times the reported amount separating President Donald Trump and Joe Biden in Arizona.

In a legal opinion submitted to Arizona state Sen. Wendy Rogers on Sept. 23, attorney Matt DePerno said a state legislature has the power to decertify a national election if fraud is pro.

DePerno wrote the memo in response to an opinion published by an Arizona Senate lawyer who had declared that the Senate could not decertify the election.

"In light of the Behringer Memo, we ask again whether a State Legislature can recall the state electors or decertify a national election upon proof of fraud in the election?" DePerno wrote. "After again considering the constitutional authority of the State Legislature, the Constitution itself, and U.S. Supreme Court authority and precedent, the answer is definitively 'Yes.' "

DePerno continued: "States have authority over their elections, including national elections. 'Congress has never undertaken to interfere with the manner of appointing electors, or, where (according to the new general usage) the mode of appointment prescribed by the law of the State is election by the people, to regulate the conduct of such election, or to punish any fraud in voting for electors; but has left these matters to the control of the States.' In re Green, 134 U.S. 377, 380 (1890) (emphasis added)."

On the eve of the Arizona audit report, Trump issued the following statement:

Why is the Fake News Media continuing on their path of saying, "baseless and disproven lies," concerning the Presidential Election of 2020, no matter how much evidence they see? These phrases are coordinated propaganda by Lamestream. It is an automatic phrase they use about the 2020 Election Scam when in fact it was just the opposite. The proof is massive and staggering. The Presidential Election of 2020 was Rigged! When the information becomes public, people will see that it wasn't even close.

I spent virtually no time with Senators Mike Lee of Utah, or Lindsey Graham of South Carolina, talking about the 2020 Presidential Election Scam or, as it is viewed by many, the "Crime of the Century." Lindsey and Mike should be ashamed of themselves for not putting up the fight necessary to win. Look at the facts that are coming out in Arizona, Georgia, Michigan, Pennsylvania, Wisconsin, and other States. If this were Schumer and the Democrats, with the evidence we have of Election Fraud (especially newly revealed evidence), they would have never voted to approve Biden as President, and had they not, all of the mistakes that were made over the last month, which are destroying our Country, would not have happened. Mike Lee, Lindsey Graham, and all of the other Republicans who were unwilling to fight for the Presidency of the United States, which would have included at least an additional four Republican Senators, two in Georgia, one in Michigan, one in Arizona, are letting the Democrats get away with the greatest Election Hoax in history—a total con job!

We are losing our Country! The Democrats are vicious and fight like hell, and the Republicans do nothing about it. RINOs fight harder against Republicans than they do against Democrats. They want to be so politically correct, even if that means losing our Country, which is happening now. The evidence on determinative and wide-ranging Election Fraud is staggering. Your Republican Presidential candidate won in a landslide, but has so little backing from Republican "leadership." They should be ashamed of themselves. Why don't they have hearings? Or even if just Republicans had open public sessions, we would all hear the irrefutable facts. Remember, the Fake News Media does not report the truth.

Who is the Enemy????

By Alan Stewart

Everything below is a form of scientific observation of our world and human influence. I don't know if you have thought of or perceived the war raging in the courts between the Environmentalists (E's) and the REALITY of life on earth. To use an old expression the E's arguments are consistently about the 'trees, not the forest,' tunnel vision.

The recent California fires and ongoing pipeline construction court stances clicked in my mind. Two things. First, anything man does is 'harmful to the environment' is the de rigeur wording constantly presented by the E's in court. Second, the words Territorial Imperative also clicked.

Now, there's a bit of confusion in my mind as I absolutely remember Territorial Imperative and its' meaning distinctly. I swear I was read a book of that title when I was about age 10 (Medieval times LOL) in the 1950s and I browsed the title but it was a 1966 publication. Link below. In either event my memory and Ardrey's hypothesis are in parallel. All flora, fauna and the human species have the innate drive to procreate their species. Both land and oceans have resources for sustaining life that is ever changing and therefore all life is constantly searching for the most fertile territory to sustain life. It is an imperative for existence. Ardrey link:

Flora:

All species are invasive and attack other parts of the environment to survive and so the environment is in a constant state of flux. Here's an example of the system: link. Within flora seed dispersion is random, limited in spatial distribution and so within especially forests, the living space is often choked for Lebensraum and then the arboreal Phoenix starts all anew as below.

Although often harmful and destructive to humans, naturally occurring wildfires play an integral role in nature. They return nutrients to the soil by burning dead or decaying matter. They also act as a disinfectant, removing disease-ridden plants and harmful insects from a forest ecosystem.

Fauna works both defensively and offensively. Defense below:

If food is limited, the animal may defend a territory to guard its food supply. With other species, such as cassowaries, the males fight over a territory in which to nest and rear their young. Territorial animals know exactly where the boundaries of their own territory lie.

So, time, energy, & risk of injury are the 'costs' of territory defense. The improved access to resources (e.g., food, nest sites, or roost sites) represents the 'benefit(s)' of territory defense. Birds should only defend territories if the benefits of defense outweigh the costs.

Offense:

Opposed to flora territorial imperative within fauna gets a bit bloody, literally, as many fauna species are carnivores as are humans. One carnivore, a flesh eater, is a minor, repeat minor avian species called the Spotted Owl, indigenous to the U.S. Northwest. A 1990's court ruling cost thousands of human livelihoods from logging within the Owl's habitat. Another species, the Barred Owl has encroached territorially and kill Spotted Owls. Ironically, some of the environmentalists in their wisdom proposed killing the Barred Owls, as they were termed, 'The Big Bullies on the Block.' The Ravens, Great Horned Owls and Red Tailed Hawks, their main predators are ignored in the E's tunnel vision.

Man: The destroyer and healer:

J. Robert Oppenheimer's searing words follow: He is termed as the 'father' of the atomic bomb and oversaw the creation of the most environmentally destructive creation of man. The world would not end with their use but a realization of what man could do and what had been doing to our gift in the vastness of the Cosmos started to be understood. What is interesting are the analogies used re the destructive power of hurricanes, tsunamis and forest fires. Those analogies are uniformly related to the equivalence of an Atomic Weapon whose powers pale in comparison to the force of Nature.

Before/after of Syncrude's Mildred Lake oil sands project.

Rachel Carson's, Silent Spring (an incorrect attack on DDT) is credited as the impetus behind the modern environmental movement. It was as searing to our psyches as Oppenheimer's creation, driven and understood by the masses because of the new technology called television and today the internet. Yes, we were 'soiling the bed we were sleeping in and we've been 'cleaning up our act' ever since. Link Syncrude.

Environmental Reality: The Enemies of Man:

The first enemy is Gaia itself. Hurricane Michael hit the Florida Panhandle on October 16, 2018 killing approximately 60+ people and causing billions of dollars of property damage and that's all you heard from the Mainstream Media. The E's blamed this regular climatic event on man-made Global Warming. But, ironically there was not a single word about the loss of Life of plants and animals espoused. Not a syllable about a natural occurrence that has taken place long before our evolution from the Olduvai Gorge.

To the E's Gaia is a Goddess. The reality is that she is the goddess of war. Watch your house cat, smiling, coming home with a dead bird in its' mouth. Watch the nature programs when a Lion eviscerates an Impala or an Orca is killing a seal. Her system requires that life requires death. Remember when you are enjoying your Caesar Salad that the Romaine lettuce was a living organism.

The second enemy is the Environmental Movement and like the Romaine allusion their movement is taking the sublime to the ridiculous. Better described is that they have become fanatics. George Santayana: 'A fanatic is a person who redoubles his efforts after he has forgotten his original aim.' For example a legal debate costing taxpayers millions is in process. Link, but it is re the Dusky Gopher Frog in Louisiana, a critter that has not been seen there for over 60 years. The suit revolves around Tammany Parish land and housing developments for people in fear of their lives. The land is north of the Gulf of Mexico and after the 2005 hurricane Katrina thousands of people started looking for homes, life, away from Gaia's history. Apparently there are about 200 of these frogs alive in several million square miles in neighboring states.

Numbers vary radically but the amount of animal, plant and insect species is at a minimum of 8,000,000 and the quantity is in the 10's of billions. Mom and Dad to the kids; 'A few people tell us we can't move to safety because of a few frogs on the verge of extinction.'

All legal challenges, as above, by the E's have the mantra, 'You are harming the environment.' The word harm is totally incorrect. It is only change that is occurring in the struggle to survive by all species against the wrath of Gaia. Here is the irony. As an attorney for the XL pipeline builder I would say, 'No pipeline then no solar/wind farm.' To put this in sensibility the renewables construction should be legally challenged and with all projects stopped by judges citing negative environmental impact, those rulings should be used as precedents. The negative environmental impact of 1 square mile of a gas burning electricity generating plant against the equivalent of 100 square miles for a renewable equivalent is grade school math. Another irony is 'Green Jobs' – I thought this was about saving the planet??? As well, the Green Jobs promise is an economic myth as they will only replace jobs in the fossil fuel resource sector.

Finis:

Dear Mr. Mrs. Mz. Environmentalist. You cannot win. The reality of the drive of all species is against your vocal minority. I agree with your base tenets and that you are of extreme value to the teaching of our past errors. But, you have become increasingly radical and with that the majority of people are realizing that your motivations are for you only. Your elitist hubris has blinded you to the fact that, best word, the Deplorables, care for the legacy they leave their children. We care and Syncrude is a perfect example.

One of two things to do. Work with us or continue your radicalism and extreme prejudice will be your reward as you are threatening the existences of all species. With the recent California conflagrations we understood the danger of woodland accumulation and the intensity of a fire from that. You wouldn't let humans mitigate that and so how many Spotted Owls are dead and how much of their habitat has been destroyed because of your most peculiar ideas of the reality of life on earth?? PLEASE ANSWER THAT!!!

Lex-Rex "The Law and the King."

"For the Lord is our judge, the Lord is our lawgiver, the Lord is our king; he will save us." Isaiah 33:22

By Riley J. Hood-Milwaukee County Constitution Party

According to Banner of Truth USA, "Samuel Rutherford (1600–61) was born in the village of Nisbet, Roxburghshire, and educated at Jedburgh Grammar School and Edinburgh University (MA, 1621). From 1623 he acted as Regent of Humanity at the University, with responsibilities as a Latin tutor. There is a strong suggestion that 1624 was the date of his conversion, and he began reading theology at Edinburgh under Andrew Ramsay."

From 1627 to 1636 he was a Presbyterian minister at Anwoth. The High Commission found him to be a non-conformist, and he was sent to Aberdeen for the "duration of the King's pleasure" which lasted two years. After the Covenanters came to power, Rutherford was restored to Anwoth, and was part of the Glasgow Assembly. He was appointed as Professor of Divinity at St. Mary's College, St. Andrews. He preached regularly during his Professorship.

In 1643, he was a Scottish Commissioner to the Westminster Assembly, and served for four years during the English Civil War. In 1644 he published Lex-Rex. In 1651, he returned to St. Andrews, and in 1661 he died, before he was put on trial for treason during the Restoration of the Stuart line, under King Charles II.

What was Lex-Rex, and why does it matter? Before 1644, the doctrine asserted was called Rex-Lex, "the King is the Law." Also known as "divine right of kings" and people who supported that were known as "royalists." This contradicted the Magna Carta, but was supported by many of the King's Christ-hating favorites, in their drive to exterminate Puritans, Separatists, etc. Lex-Rex meant the Law was above the King, and it was the King's duty to maintain the Law. If the King is indeed answerable to God, as the royalists affirmed, then the King has a derived authority, as opposed to existing as a superior being.

Lex-Rex had a title and preface, and then was organized as answers to 44 questions, you can read the whole work at lonang.com. The First query was Whether Government Be Warranted by a Divine Law: He answers, "That power of government in general must be from God, I make good, 1st, Because (Rom. 13:1) "there is no power but of God; the powers that be are ordained of God." He further affirms Romans 13:5 and 1Peter 2:13.

From Question 4, Whether the King Be Only and Immediately from God, and Not from the People, "The question is, Whether the kingly office itself come from God. I conceive it is, and flows from the people, not by formal institution, as if the people had by an act of reason devised and excogitated such a power:" Rutherford adds, "For the pastor's and the doctor's office is from Christ only; but that John rather than Thomas be the doctor or the pastor is from the will and choice of men."

Rutherford's Conclusion, "The power of creating a man a king is from the people. Because those who may create this man a king rather than that man have power to appoint a king; for a comparative action does positively infer an action. If a man have power to marry this woman and not that woman, we may strongly conclude that he has power to marry;" Rutherford refers to 1 Kings 16, the people choosing Omri king over Zimri, and Ahab over Tibni. He asserts, "Nor can it be replied that this was no lawful power that the people used, for that cannot elude the argument; for (1 Kings 1) the people made Solomon king and not Adonijah, though Adonijah was the older brother." "This is what we say, God by the people, by Nathan the prophet, and by the servants of David and the states crying, 'God save king Solomon!' made Solomon king; and here is a real action of the people," and "2 Sam. 16:18, Hushai said to Absalom, Nay, but whom the Lord and the people, and all the men of Israel choose, his will I be, and with him will I abide; Judg. 8:22, The men of Israel said to Gideon, Rule thou over us; Judg. 9:6. The people made Azariah king; 1 Sam. 12:1; 2 Chron. 23:3."

He said, "God extraordinarily designed some men to be kings, and anointed them by his prophets, yet were they never actually installed kings till the people made them kings. I prove the assumption, Deut. 17:14, 15, "When thou shalt say, I will set a king over me, like as all the nations that are about me, thou shalt in any wise set him king over thee whom the Lord thy God shall choose; one from amongst thy brethren shalt thou set king over thee: thou mayest not set a stranger over thee, which is not thy brother."

Rutherford referred to Judges 9:6, I Samuel 11:15, II Kings 10:5, I Chronicles 12:38, Exodus 18:21, Deuteronomy 1:16-17, I Samuel 10:21, and many other Bible verses, in his arguments against "Royalists" and "popish writers." In the case of the last term, which he used to describe Roman Catholics, and Anglicans, I would just say it was a product of the violence of that age. His book was banned in Scotland, and in England under Charles II. Still, John Locke would make similar arguments during the Glorious Revolution, and even Thomas Paine would cite some of the same Bible verses in Common Sense.

This is a far different legacy than "if it feels good, do it," and "workers of the world unite," or even the atheistic French Revolution credo of "Liberty, Equality, Fraternity." This is far different than the writings of Albert Jay Nock who wrote, "Our enemy the state." If you need more proofs of Rutherford's Christian profession, here are two, "They lose nothing who gain Christ." And, "Christ chargeth me to believe His daylight at midnight."

The Milwaukee County Constitution Party asserts that the struggle for English liberty influenced our founding fathers, who after all were English colonists. After having failed at reform, men like John Adams asserted that there must be a greater liberty established here in America, but that liberty was still to be Christian, and under God. It was hardly the atheistic chaos we have today, described by Robert Charles Winthrop, paraphrasing William Penn, Ben Franklin and others who said "Men, in a word, must necessarily be controlled, either by a power within them, or by a power without them; either by the word of God, or by the strong arm of man; either by the Bible, or by the bayonet."

The Constitution Party of Wisconsin, a recognized political party, promotes the Biblical principles referred to in the Declaration of Independence and United States Constitution. We promote these principles by guiding our members into positions of civil authority.

CPOW is:

- 100% Pro-Life-We will re-secure the Right to Life.
- 100% Pro-Family-One Man, One Woman marriage.
- 100% Pro-Gun-We reject any form of gun control.
- 100% Pro-Constitution-We will cut the federal government down to Constitutional size.
- 100% Pro-America-We favor American Liberty, America's economy and American energy for the American People.

Individual membership is $30.00 per person per year and Friend of the Party status is $20.00 per year.

Operation Stolen Innocence

"Ye have heard that it was said by them of old time, Thou shalt not commit adultery:But I say unto you, That whosoever looketh on a woman to lust after her hath committed adultery with her already in his heart." Matthew 5:27-28

By Riley J. Hood—Milwaukee County Constitution Party

Tallahassee Democrat reporter Jeff Burlew on Wednesday November 18th, 2020 wrote, "A two-year investigation by the Tallahassee Police Department" resulted in 178 people "charged over recent months." Burlew reported TPD chief Lawrence Revell, "announced results of Operation Stolen Innocence, a highly secretive investigation into the commercial sex trafficking of the girl, who was 13 and 14 when the alleged offenses occurred." The investigation began in 2018 from an online pay for sex listing. The people arrested are being charged with felonies such as the procession and production of child pornography, and lascivious battery. Others are facing solicitation of prostitution charges. The Miami Herald asserts, "18 people in the state capital face federal charges, 106 were charged with felonies and 72 suspects were charged with misdemeanors." (The Miami Herald mentioned Operation Superbowl Cleanup, which happened in early 2020 in their article.) The TPD Special Victims Unit, were joined by the US Department of Homeland Security, the US Attorney's Office for the Northern District of Florida, the US Marshals Service, the Florida Department of Law Enforcement, the State Attorney's Office and the Leon County Sheriff's Office.

Burlew describes the perpetrators to "include a former write-in candidate for local office, a PE teacher and a former chairman of Seminole Boosters Inc." "I know it's hard to believe that something like this happens here in our community," said Lorena Vollrath-Bueno, felony chief for the State Attorney's Office, "But it does." Vollrath-Bueno said human trafficking is "a $150-billion-a-year global industry, with nearly two-thirds of the profit coming from commercial sexual exploitation." She estimates that 50,000 people are trafficked each year in the United States alone. Elizabeth Bascom, one of the lead police investigators, called the girl's exploitation "horrific." She said the abuse probably began even before her 13th birthday.

So, this what America has become? God grant us repentance. I would dare say pornography is a problem to be contained for every man, as men are visually oriented, and men have the more aggressive sex drive. Our Party confronts such issues, "Pornography: Samuel Adams said, 'While the people are virtuous they cannot be subdued; but once they lose their virtue they will be ready to surrender their liberties to the first external or internal invader.' Pornography, is a distortion of the true nature of sex created by God for the procreative union between one man and one woman in the holy bonds of matrimony, and is a destructive element of society resulting in significant and real emotional, physical, spiritual and financial costs to individuals, families and communities. We call on our local, state and federal governments to uphold our cherished First Amendment right to free speech by vigorously enforcing our laws against obscenity to maintain a degree of separation between that which is truly speech and that which only seeks to distort and destroy." We would remind you that speech is words, spoken and printed, and pictures on the other hand may or may not be art or expression. The First Amendment to the US Constitution reads, "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press, or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances." There is nothing in there about "artistic license" or "free expression" much less "sexual freedom."

Our Party asserts that with the advent of the Internet and the benevolent neglect of the previous administrations, pornographers enjoyed uninhibited growth and expansion where today that we live in a sex-saturated society where almost nothing remains untainted by perversion. Our platform says, "While we believe in the responsibility of the individual and corporate entities to regulate themselves, we also believe that our representative body we call government plays a vital role in establishing and maintaining the highest level of decency in our community standards." When we wrote this in 1990, we were not referring to standards from "the civil rights community" or the "gay community" but standards in place during the founding of this once great nation. We reject the idea that you can wrap your lust up in an American flag, misquote the Constitution and call that freedom.

If you care about "securing the blessing of liberty to ourselves and posterity" then legalizing prostitution will result in more sex-slavery not less, as the pimp will become a legal "businessman" and his monkey business will destroy the lives of more women, and children. Family breakdown will be worse than what is already is, if you can even imagine that. We were failing as a society before America's pimp Hugh Heffner opened the bottomless pit with Playboy magazine, which was considered tame by the 1970's. Millions of Americans have been corrupted. In a better day and age, people used to say such a thing "un-manned you" and "turned you into an animal." In the 1950's it was winked at, and "young red-blooded American boys" were on their way into growing up into "old perverts." In the 1980's such moral corruptions were taught in public schools as normal, which is a failure in local government to have the local school teacher teach students to disobey the local laws on the books.

The Muslim Report: Malawi

"A righteous man falling down before the wicked is as a troubled fountain, and a corrupt spring."
Proverbs 25:26

By Riley J. Hood—Milwaukee County Constitution Party

Malawi has an Islamic state within its nation, mainly on the coastline of Lake Malawi. Muslims are now 12% of the population. They dominate the economy, and Malawi's four main political parties. This is a political Jihad. It was only a matter of time, and now the actual Jihad is turned on Christians.

While Christians are 77% of the nation, and yet they are second class citizens. In the village of Mosiya, Muslims have ordered a Church to vacate in their words, "Muslim territory," when no territory is legitimately Islamic. This Church has a school, and Muslims started sending their girls there. When they were not allowed to wear the hijab, the Muslims had a temper tantrum, justified by their Imam. They said, "We will use whatever means necessary to force the church to move," they raved, "especially if fails to bow down to our command." This tyranny isn't coming from Boko Haram, but your average, typical Muslims.

The Milwaukee County Constitution Party asserts that Christians and everybody else for that matter are not bound to tale orders from any Muslim, because they are Muslim. We further assert that it may be convenient for you to cave in the threats of Islam, but every time you do, the Muslim expands his no-go zone and his empire.

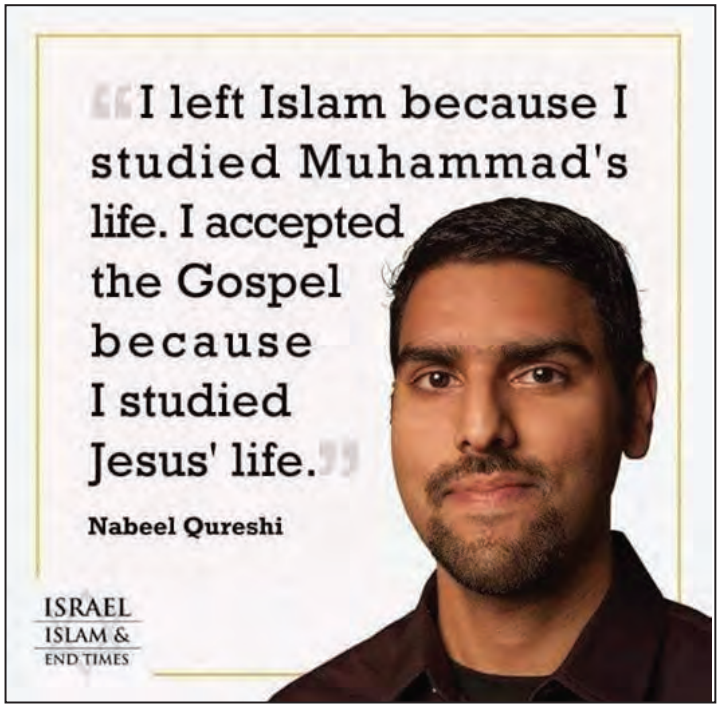
The Muslim Report: The Solomon Islands

"A little leaven leaveneth the whole lump."
Galatians 5:9

By Riley J. Hood—Milwaukee County Constitution Party

In 1998 there were 12 Muslims in the Solomon Islands. The number is now in the thousands. The new coverts express their antipathy for Christianity, which suppressed violent traditional customs, such as personal vengeance, and polygamy. Whereas Islam being embedded with violence and polygamy it has a pagan appeal.

There are two main Islamic groups on the islands, the Ahmadiyya's, which are considered heretical, and the Tablighi Jamaat, a strict Sunni Sect. The islands are 90% Christian, but then again, at one time there were no Turks in Asia Minor, and the area falsely called Turkey was 90% Christian. See where this is going? While the letter to the Galatians was written to people who wanted to make a hybrid of Christianity and the ceremonial Old Testament, which wasn't so old at that time, the quote certainly reminds one of the way those "peaceful Muslim" infiltrators work, until one day they get a working number. Then the mask of nicety is removed, and they switch from the Jihad of deception, to a full-frontal Jihad.



What About the Man? the Woman? Or the Church?

"And why beholdest thou the mote that is in thy brother's eye, but considerest not the beam that is in thine own eye?"
Matthew 7:3

By Riley J. Hood—Milwaukee County Constitution Party

In March 2021 I asked a 74yr-old lady in Church to sign the Preborn Can't Wait Petition, and in an act of irresponsibility she blurted out, "What about the man?" I told her that if the man is a rapist, then he should be punished and not the baby. If "the man" impregnated the woman by consent, it is time to grow up and get married. She didn't like either answer, because she is loving, namely she loves the world, and loves to abet the wicked, especially those in her family. I asked her, "What about the women?" she reverted back to her "me too" position and asserted that women are victims of abortion, because they have hurt feelings, as opposed to babies who have been dismembered.

What about the woman? I would dare say the feminist strategy that has emerged out of some CPC's ensures that murder under color of law will not end until America does, baring Divine Intervention. The fact is 60,000,000 plus babies have been murdered by doctors contracted by "the woman," on the basis of one woman named Norma McCorvey, aka Jane Roe, who wanted to murder her baby. (Norma repented in later years, but she found out that the abortion industry was never about her at all.)

It has been spouted by some, that Churches aren't very "life affirming" because they aren't very "woman affirming" but that hasn't been the reality for my thirty-seven years in the faith. I have seen more baby showers, and baby dedications for unwed mothers than I can count. It isn't the child's fault, being born out of wedlock, and most churches are fully supportive, I would say almost all. On the other hand, most churches are silent.

Some 40% of women contracting to have their child aborted are "Christian" or a better term would be "church acquainted." But what is missing is the Church's voice. I know women who had abortions, and two major things occurred. The first is that they believed in the sovereignty of government, if the Supreme Court said it was okay, then it was okay. The Second thing is that there was no warning sounded from the pulpit, so the women was left to figure it out alone, and to fail. Lost sheep without a shepherd. If an ounce of prevention is worth a pound of cure, a woman keeping her baby because she heard God's word, the Bible applied to her life regarding the baby her womb is worth all the forgiveness retreats in the world.

And yes, most of the women I know personally, they went to bed with irresponsible self-centered heathen, based on their "love feelings" which were in reality misplaced affections. Sometimes, "the man" would get mad at the women he seduced because she had the temerity to get pregnant as a result of his adolescent attentions. American society calls that an "unexpected pregnancy," but the Milwaukee County Constitution Party asks both parties involved, "what did you expect?" Unplanned pregnancy? What were you planning on when you had intercourse? There are many excuses, but no good reason to have or support abortion, it is murder.

Regarding "pro-life ministry" such as CPC's or unwed mother homes, your ministry would be more effective if the law was on the side of the baby. When your group undermines efforts to abolish abortion by making it punishable as murder, you undermine your own groups efforts. Planned Parenthood would have a harder time suing, if abortions were crimes, because you could say PP was trying to force your group into illegal activity. If your focus is reaching women, how about starting with the truth? The reality is, preborn babies are murdered by abortion, and court precedent has empowered women to hire a medical hitman to murder their baby. That is the reality. Pointing fingers at "the man" is immature and irresponsible, especially when you are supposed to be grown up.

Behind India's Ivermectin blackout: New Covid cases dropped 97 percent in 5 weeks

By WorldTribune Staff, Oct 6, 2021

In June, five weeks after health officials in Uttar Pradesh, India's most populous state, launched an aggressive program to fight Covid and the Delta variant, new cases dropped by a staggering 97.1 percent.

According to ZeeNews of India, "The strategy of trace, test & treat yields results."

The health officials went door-to-door in the state of 230 million residents, providing a test and treat program with medicine kits.

The World Health Organization (WHO) praised the overwhelming success of the program, but would not identify the medicines used in the kits provided to residents.

International media, including Big Media in the United States, also refused to identify the medicines in the kits.

What was in the kits?

That would be Ivermectin.

By July 2, Covid cases in Uttar Pradesh were down a full 99 percent, and still media would not acknowledge that Ivermectin was a key ingredient in the Uttar Pradesh success story.

On Aug. 6, India's Ivermectin media blackout ended as Western media, including MSN, "finally acknowledged what was contained in those Uttar Pradesh medicine kits," Dr. Justus R. Hope noted in an analysis for The Desert Review on Sept. 27.

On Aug. 25, the Indian media finally picked up on the discrepancy between Uttar Pradesh's massive success and the failure in other states, such as Kerala. Although Uttar Pradesh was only 5 percent vaccinated to Kerala's 20 percent, Uttar Pradesh had just 22 new Covid cases on Aug. 25, while Kerala was overwhelmed with 31,445 that day.

"So it became apparent that whatever was contained in those treatment kits must have been pretty effective," Dr. Hope noted.

News18 reported: "Let's look at the contrasting picture. Kerala, with its 3.5 crore population - or 35 million, on Aug. 25 reported 31,445 new cases, a bulk of the total cases reported in the country. Uttar Pradesh, the biggest state with a population of nearly 24 crore - or 240 million - meanwhile reported just 22 cases in the same period.

"Kerala reported 215 deaths on Aug. 25, while Uttar Pradesh only reported two deaths. In fact, no deaths have been reported from Uttar Pradesh in recent days. There are only 345 active cases in Uttar Pradesh now while Kerala's figure is at 1.7 lakh - or 170,000."

By Sept. 12, Livemint reported that 34 districts in Uttar Pradesh were declared Covid-free or had no active cases. Only 14 new cases were recorded in the entire state on that day.

On Sept. 22, Dr. John Campbell broke India's Ivermectin blackout wide open on YouTube by revealing the formula of the Uttar Pradesh kits, "much to the dismay of Big Pharma, the WHO, and the CDC," Dr. Hope noted. "Readers will want to watch this before it is taken down. See mark 2:22."

Each home kit contained the following: Paracetamol tablets [tylenol], Vitamin C, Multivitamin, Zinc, Vitamin D3, Ivermectin 12 mg [quantity #10 tablets], Doxycycline 100 mg [quantity #10 tablets]. Other non-medication components included face masks, sanitizer, gloves and alcohol wipes, a digital thermometer, and a pulse oximeter.

Dr. Hope added: "Although India's Ivermectin victory over Covid may have been lost on bent-on-vaccinating-everyone Big Pharma and Big Regulators, the message seems to have gotten through to the man on the street. If Google Trends is any indicator, interest in Ivermectin is exploding, and for good reason. We are all being systematically deceived by influential organizations in the name of profits."

The following was posted on Telegram:

"With only 5% of Uttar Pradesh's 230 million people vaccinated, early treatment home kits wiped out an outbreak of COVID-19 dropping cases by 99% in three weeks.

"What was in the home kits? Tylenol, Vitamin C, Multivitamin, Zinc, Vitamin D3, Ivermectin 12 mg [10 tablets], Doxycycline 100 mg [10 tablets].

"The home kits cost less than $3 per person and brought the number of active cases to below 200. This is remarkable considering the province had more than 310,000 active cases during the peak of its COVID outbreak.

"In comparison, one course of Remdisivir cost $3,100 and is the standard of care in many U.S. hospital systems even though the WHO has recommended against its use and meta-analysis studies have shown that it is ineffective against COVID-19."

80% of COVID-19 Deaths

cont. from page 9

27th August which saw 15,647 cases among the unvaccinated population and 22,234 cases among the vaccinated population, and the same can also be said for the previous two weeks before that.

The data actually shows that between 7th August 2021 and the 3rd September 2021 there were 47,580 cases among the unvaccinated population, 21,020 cases among the partly vaccinated population, and 41,748 cases among the fully vaccinated population. Meaning there were 15,188 more cases among the vaccinated population.

So now that we've cleared up that the experimental Covid-19 injections clearly do not prevent infection or spread of Covid-19, let's find out if they prevent hospitalisations like the authorities claim.

According to table 16 of the report between the 28th August 2021 and the 3rd September 2021 there were 36 admissions to hospital related to Covid-19 among the unvaccinated over 60 population, whilst there were 7 admissions on the partly vaccinated population.

However, there were a huge 299 admissions among the fully vaccinated over 60 population, and the same pattern can be seen for the weeks previous all the way back to the 7th August 2021.

In all for the week of 28th August to 3rd September 2021 there were 271 hospitalisations among the entire unvaccinated population but 423 hospitalisations among the fully vaccinated population. If we base these hospitalisations occurring after the previous weeks confirmed cases then we can calculate the case-hospitalisation rate.

In the week beginning 21st August there were 15,647 confirmed cases among the unvaccinated population. Therefore based on the unvaccinated hospitalisation figures of 271 in the week beginning 28th August the case-hospitalisation rate is 1.7%. However, when we carry out the same calculation for the fully vaccinated population hospitalisations (423) and cases (14,519) we can see that the case-hospitalisation rate is 2.9%.

Therefore, this shows that the Covid-19 injections are increasing the risk of hospitalisation when exposed to Covid-19 by 70% rather than reducing the risk by the 95% claimed by the vaccine manufacturers and authorities.

So now that we've cleared up the Covid-19 injections increase the risk of hospitalisation rather than reducing it let's find out if they prevent deaths like the authorities claim.

Table 17 of the Public Health Scotland report shows the number of deaths to have occurred via vaccination status. However, PHS have been very clever in the way they've presented the number of deaths. Because rather than present them on a week by week basis like they have with the number of cases and hospitalisations, they've instead included deaths all the way back to the 29th December.

This means they are including deaths from the height of the alleged second wave of Covid-19 where just 9% of the population had received a single dose, and just 0.1% of the entire population were fully vaccinated. Therefore, PHS are very sneakily able to give the impression that the majority of Covid-19 deaths are occurring among the unvaccinated population.

The above table is taken from the report released by Public Health Scotland on the 18th August 2021 and shows deaths due to Covid-19 by vaccination status between the 29th December 2020 and the 5th August 2021. As you can see anyone reading the report would be given the impression that the vaccines are doing a fantastic job at preventing death due to Covid-19.

But fast forward to the most recent report and you will find on Table 17 that there have been 3,102 deaths among the unvaccinated population, 279 deaths among the partly vaccinated population and 298 deaths among the fully vaccinated population between the 29th December and the 26th August 2021.

Therefore, the true number of deaths by vaccination status between the 5th August 2021 and the 26th August 2021 are as follows –

- Unvaccinated population – 25 deaths
- Partly vaccinated population – 6 deaths
- Fully vaccinated population – 92 deaths

This means the unvaccinated population have accounted for just 20% of alleged Covid-19 deaths throughout the whole of August, whilst the fully vaccinated accounted for 75% of them. But couple the partly vaccinated deaths with the fully vaccinated deaths and you can see that throughout August 80% of deaths occurred among the vaccinated population.

However this makes it hard to work out the case-fatality rate so to do this we need to look at how many deaths occurred in the previous weeks report. Up to the 19th August there had been 3,096 deaths among the unvaccinated, 277 deaths among the partly vaccinated, and 264 deaths among the fully vaccinated.

Therefore, the true number of deaths by vaccination status between the 19th August 2021 and the 26th August 2021 are as follows –

- Unvaccinated population – 6 deaths
- Partly vaccinated population – 2 deaths
- Fully vaccinated population – 34 deaths

If we base these deaths on occurring two weeks after the number of confirmed cases then we can work out the case-fatality rate.

In the week beginning 7th August there were 3,788 confirmed cases among the unvaccinated population. Therefore based on the unvaccinated death figures of 6 in the week beginning 19th August the case-fatality rate is 0.15%. However, when we carry out the same calculation for the fully vaccinated population hospitalisations (34) and cases (3,490) we can see that the case-hospitalisation rate is 1%.

Therefore, this shows that the Covid-19 injections are increasing the risk of death when exposed to Covid-19 by a huge 566% rather than reducing the risk by the 95% claimed by the vaccine manufacturers and authorities.

What's even more concerning about this is that the number of confirmed cases among the fully vaccinated population have rose significantly in the most recent week compared to four weeks prior. Therefore the number of hospitalisations and deaths that could occur in the next few weeks could possibly be enough for the authorities to justify another lockdown.

The data clearly shows the jabs do not prevent infection or transmission, and it clearly shows that they are increasing the risk of hospitalisation and death rather than reducing the risk.

Whistleblower: VAERS database undercounting vax complications by factor of 100

By WorldTribune Staff, Sept. 16, 2021

The real number of Covid vaccine complications is more than 100 times what is currently being reported to the national database which tracks deaths from and adverse reactions to vaccines, a whistleblower said. Dr. Mollie James, in an interview with the Gateway Pundit, pointed to peer-reviewed studies and surveys that show the Vaccine Adverse Event Reporting System (VAERS) is off by a factor of 100. Dr. James estimated that in her intensive care unit in New York City, she sees 30 percent or more who clearly have complications after having received the vaccine.

"There is clearly an increased risk of strokes, heart attack, blood clots, autoimmune issues, arterial issues, and neurological issues associated with the vaccine that are not being tracked because politics is demanding that the vaccine be considered perfect," Dr. James said. "The risks go all the way up to death. People are suffering major adverse reactions and I have no doubt many are dying from these vaccines but we can't discuss this openly without fear of political consequences. I have to speak out."

The doctor said many of her colleagues "are scared of the politics, of being outed, shamed, and ridiculed. It's easy for a doctor to lose their admitting privileges somewhere, and many know if they report something as a vaccine side effect they could lose their job. I just can't believe what I'm seeing over and over again, and I've decided to come forward because this is such a silent crisis of public health, people have to know how bad things are and they need to know the real risks of the Covid vaccines."

USCCB memo reveals women identifying as 'trans men' infiltrated seminaries

By LifeSite News

WASHINGTON, D.C. (LifeSiteNews) – A United States Conference of Catholic Bishops (USCCB) memo has suggested bishops consider DNA tests and medical examinations for admittance to seminary and religious life after multiple women identifying themselves as men were admitted to seminaries and houses of formation.

The memo, issued by Milwaukee Archbishop Jerome Listecki, head of the USCCB Committee on Canonical Affairs and Church Governance on September 22, states that the committee was recently "made aware of instances where it had been discovered that a woman living under a transgender identity had been unknowingly admitted to the seminary or to a house of formation of an institute of consecrated life." It is not specified whether or not the seminaries and houses of formation were in the United States or elsewhere, nor is it specified how often such incidents occurred.

The memo mentions an instance in which "sacramental records had been fraudulently obtained to reflect [the individual's] new identity." In all instances, however, "nothing in these individuals' medical or psychological reports had signaled past treatments or pertinent surgeries." None of the women identifying themselves as men had as yet attempted Holy Orders.

Fact Check: NIH doesn't recommend ivermectin because its panel members have conflicting financial interests

By Ethan Huff Wednesday, 9/22/21

(Natural News) The National Institutes of Health (NIH) does not think that anyone should ever be allowed to use ivermectin to try to treat a Wuhan coronavirus (Covid-19) infection. The reason is because its board members have financial interests elsewhere.

You see, by allowing ivermectin to be used as an early treatment for Chinese Germs, NIH board members could lose money in their other investments. And since money is their god, your life must be sacrificed on the altar of "science."

According to the NIH, there is supposedly "insufficient evidence" to support the use of ivermectin, which means that the agency will not recommend its use. Upon closer look, though, "insufficient evidence" is just a convenient excuse.

The truth, according to revelations brought to light via a Freedom of Information Act (FOIA) request, is that numerous NIH board members have direct financial ties to Merck, a pharmaceutical company that just so happens to have campaigned against the use of ivermectin for treating the Wuhan Flu.

Merck, by the way, manufactures ivermectin and it would appear that its financially tied board members at the NIH have been instructed to hold out for a new on-patent replacement, so they can all make more money.

Adaora Adimora, Roger Bedimo, and David V. Glidden are among the NIH board members who get paid by Merck to pursue its interests. These interests do not include prescribing ivermectin to treat the Fauci Flu, which explains why the NIH opposes its use.

Another NIH board member, Susanna Naggie, also has a conflict of interest in that she was awarded a $155 million grant to study ivermectin after she voted to oppose the drug's recommendation.

"Funding for the study would have been difficult to justify if the drug was recommended for use in COVID-19," reported TrialSiteNews. "It is not known, however, if the panelist was aware of that opportunity or was planning to apply for that grant at the time of the deliberations on ivermectin."

The NIH is just as corrupt as the FDA and the CDC

In order to claim that there is "insufficient evidence" supporting ivermectin's use in treating covid, the NIH had to sidestep the mountain of evidence showing that the drug does, in fact, fight viruses.

The NIH basically had to pretend as though all the independent science out there in support of ivermectin does not actually exist. Instead, we were told, ivermectin is just a "horse dewormer" that everyone should ignore for their own safety.

This tactic might work on people who believe everything the television tells them and who never do any of their own research, but to everyone else this is an obvious lie.

Not only has the NIH made a total mockery of itself, but it has defiled the notion that Americans can trust their regulatory bodies to tell them the truth for the sake of public health.

The only thing that Merck, the NIH and their ilk care about is their own bank accounts. Your life certainly does not matter to these greed-buckets, who will continue to watch people needlessly die while raking in all that special interest cash.

The fact that the NIH would not even publicly reveal why it issued a non-recommendation for ivermectin is telling in and of itself. What other skeletons in the closet are this fake public health agency trying to hide?

"The deception and secrecy surrounding the NIH ivermectin non-recommendation should have raised serious doubts about its integrity," TrialSiteNews explained.

"The grotesque conflicts of interest of Panel members should make it clear that the NIH, as the FDA (Food and Drug Administration) with its slandering of ivermectin as a 'horse dewormer,' should not be taken seriously."

Meanwhile, this pharma-industrial complex of corruption is trying to cut off all ivermectin prescriptions period, which would make it next to impossible for people to access.

Bishop calls out Vatican institute for wanting to 'redefine' the family unit

By LifeSite News

Bishop Joseph Strickland is pushing back against comments made by the new head of the conservative-turned-liberal Pontifical John Paul II Theological Institute for Matrimonial and Family Science.

Weeks after taking up his post as the new president, Monsignor Philippe Bordeyne made a remarkable statement in an interview with La Croix International, the unofficial daily of the French episcopate. He said that "we theologians cannot continue to assert certainties about the family when we see the transformations it is undergoing today."

Many commentators have taken Bordeyn's remarks in the interview, as well as other heterodox and pro-gay comments he has made on "different families" to mean he is attempting to introduce a novel definition of family in the Church.

Bishop Strickland re-iterated to Terry Barber of Virgin Most Powerful Radio that "marriage and family … are the building blocks that God has given us." The "vast majority of the the issues that we see in society today … is because of the erosion of family and the lack of understanding of what marriage is. And to abandon that is really just more destructive to human society."

Strickland further clarified that a false sense of mercy is leading priests to be overly "pastoral" and causing them to not uphold Church doctrine. "Compassion doesn't mean trying to redefine what a family is. I believe what God has revealed to us is what we [should] always keep [as the] basic model."

Biden Vaccine Mandates *cont. from page 1*

of American citizens through an executive order vaccination mandate for all federal government employees, contractors, and military personnel… plus an Occupational Safety and Health Administration (OSHA) ruling that directs all businesses with 100 or more employees to make vaccination a condition of employment.

For the record, I am truly grateful for the marvelous Trump COVID-19 vaccine, which following two shots, has provided confidence — at the vulnerable age of 83 — to return to face-to-face teaching engagement with my international graduate students.

Nevertheless, everyone, based upon individual circumstances and concerns, should be shamelessly allowed to make their own individual vaccination and booster assessments.

Sticky Science Problems

Unilateral cookie-cutter mandates don't exempt an estimated 100 million or more individuals who have recovered from COVID with natural immunity that tends to be more robust and longer-lasting than afforded by vaccines.

Also, the general idea that all unvaccinated people should be essentially criminalized for posing callously dangerous threats to others is difficult to reconcile with assurances that vaccines offer effective protection.

According to the CDC, pre-delta variant, so-called "breakthrough" cases of COVID-19 after vaccination, were relatively rare.

Depending upon regional factors — overall vaccine effectiveness ranged between 72% and 97% against infection, and 84% to 97% against hospitalization.

A Sept. 17 update since the arrival of the more contagious delta variant of the virus indicates that vaccine effectiveness ranges against infection and against hospitalization are comparable.

In any case, the same administration that claims a "scientific urgency" for pushing universal vaccination for American citizens is apparently unconcerned about releasing many thousands of unvaccinated illegal southern border crossers every month.

An August Department of Homeland Security Department report revealed that more than 18% of those immigrant families, and 20% of unaccompanied minors, tested positive for COVID prior to leaving Border Patrol custody to infect a neighborhood near you.

Toxic Personal Matters

Why would anyone resist submitting themselves or a family member in their care to a vaccine that is "for the greater public good?"

Some may simply believe that government has no moral nor legal authority to determine what they or a loved one must be required to put into their body.

If a president can force employees, contractors, military, and even private companies to comply with medical dictates in the name of public health, where does such despotic intrusion on basic constitutional civil liberties end?

Since the Biden mandates even apply to employees working from home, should OSHA be allowed, based on health reasons, to ban COVID-vulnerable overweight employees from consuming foods containing trans fats?

Other vaccine holdouts may sensibly distrust government to replace a trusted and informed physician in determining what is best for themselves or their children.

For example, according to Dr. Marty Makary of the Johns Hopkins University School of Medicine, people with natural COVID immunity are at heightened vaccine side effect risks resulting from an augmented inflammatory response.

There are also some COVID vaccine-hesitant individuals with very good causes to distrust unknown and potentially disastrous consequences of medical treatments which have no long-term assessment history.

Millions of vaccine mandate-impacted government and private employees will be women of young COVID-tolerant childbearing ages who worry about potential adverse effects upon their unborn.

Former Pfizer vice president and chief scientist for allergy and respiratory research, Dr. Michael Yeadon, strenuously endorses this COVID-19 vaccine concern.

"You never ever give inadequately tested medicines, medicinal products, to a pregnant woman," Yeadon emphasized.

"And that is exactly what is happening. Our government is urging pregnant women, and women of childbearing age, to get vaccinated. And they're telling them they're safe. And that's a lie because those studies have simply not been done."

Furthermore, "reproductive toxicology has not been undertaken with any of these products, certainly not a full battery of tests that you would want," Yeadon said.

"So, here we are. There's been potentially hundreds of millions of women of childbearing potential [injected] with products which are untested in terms of impacts on fertilization and development of the baby," Yeadon added.

Although CDC's guidelines have stated that COVID vaccines are "unlikely to pose a risk for people who are pregnant," it had previously admitted that there was "limited data on the safety of COVID-19 vaccines in pregnant people."

CDC has also stated that "there are limited data available on the safety of COVID-19 vaccines in people who are breastfeeding, effects of vaccination on the breastfed baby," and "effects on milk production or excretion."

Combatting Coercive Control

As David Rivkin Jr. and Robert Alt observe in a recent Wall Street Journal article, although OSHA is authorized to enact rules that are "reasonably necessary or appropriate to provide safe or healthful employment and places of employment," the Biden mandate is unreasonably and unnecessarily broad.

The authors point out that while the White House justifies the mandate as a proportional response to the spread of COVID's delta variant, which is straining hospital capacity in some states, the dictate is nationwide, indefinite, and not tied to COVID rates.

Therefore, if Congress delegates discretion to an agency such as OSHA without a proper limiting principle, it violates the separation of powers.

In summary, if a president can order private companies to dictate such COVID vaccine mandates to coerce citizens in the name of public health, "This would both be profoundly unconstitutional and fundamentally transform the relationship between the government and the people."

And this appears to be precisely what President Biden and his radical Democrat minions have in mind.

Why Does Our Side Lose?

By Tom DeWeese, September 28, 2021

Why does our side lose?

It seems we are facing active battlefields on every front – and every day brings a new threat.

As we watch our nation fall into chaos, with our economy locked down, the ability to own and control our own property disappearing, the public schools becoming factories turning out compliant global village idiots, the soaring national debt, skyrocketing gas prices, the destruction of the nation's healthcare system, the assault on religion, and the growing threat of a total surveillance society watching our every move – despair and defeat are taking hold.

There seems to be no consequences for public officials who are pushing this agenda to destroy our Republic. Why?

Because we are fighting the wrong battle, ignoring the true combatants.

The fact is, Donald Trump called it exactly right when he warned us of the Deep State, hidden in the background, calling all of the shots.

Who are THEY?

As I have warned for many years, their official term is Non-Governmental Organizations (NGOs). There are thousands of them world-wide.

Here is a small example.

The Nature Conservancy, Sierra Club, Audubon Society, Pew Charitable Trust, Rockefeller Foundation, Ford Foundation, Packard, Merck, Heinz, MacArthur Foundation, W. Alton Jones, Natural Resources Defense Council, Environmental Defense Fund, World Wildlife Fund, World Watch Institute, ICLEI, and on and on.

This is just a sampling of the cabal that makes up the radical environmental agenda that is pushing Agenda 21, Sustainable Development, the Green New Deal, National Heritage Areas and Climate Change.

And, of course, these are the policies behind the destruction of the energy industry, the assault on our personal transportation choices, housing and private property, the attack on the farming industry and our food supply. And the total indoctrination of our children in their classrooms.

Meanwhile, as many local activists are completely unaware of this hidden cabal, they are discouraged as they try to talk with their elected representatives about the assault on their liberties.

These concerned citizens are ignored. The cabal is whispering in the ear of the elected representatives that these people are nut cases -- not to be considered.

This is the real enemy that is destroying our way of life. And it's the reason why we are losing.

How Do We Win?

I have dedicated my whole life to learning all I can about these powerful forces and how to defeat them to save our Republic.

And now I have made it the full-time task of the American Policy Center (APC). I have sounded the alarm, created detailed plans and tactics on how they can be defeated, and I am teaching a growing force of dedicated activists.

Over the past several months I have been telling you of some of our tactics for the most effective ways to fight back.

First and foremost - we have to take the fight to the local level.

The Deep State Cabal knows that the local level is where the fight must be fought. They openly said so years ago. In 1996, ICLEI said in a published document on Agenda 21, "No one fully understands how, or even if, Sustainable Development can be achieved. However, there is growing consensus that it must be accomplished at the local level if it is to be achieved on a global basis."

Right in your local community – that's where they are enforcing these policies – and that's where they must be stopped! If every community begins to stop these assaults on our freedom, no Federal Congress can stop US!

APC is teaching local activists how to build a local organization – Freedom Pods! We are teaching how to deal with the news media. And we are teaching how to build effective precinct organizations to elect the right people to office.

And I will tell you this – if we can elect dedicated freedom advocates to city councils and country commissions who fully understand how these private, NGO forces operate – then we can stop them at every turn.

The only reason why these private NGO forces have any authority in your community is because your elected representatives give it to them!

Elect people who will run them out of town and their tyranny will end!!

This is what I and the American Policy Center are teaching activist to do across the country. And it's starting to have an effect. More and more activists are calling on APC for help.

But of course, we are up against powerful, massively funded forces who are doing all they can to stop us.

I don't need millions to defeat them. But I do need a steady source of dollars to keep APC rolling. APC doesn't get corporate grants – for obvious reasons. And I wouldn't take government grants under any circumstances.

That's why I must appeal to you as a dedicated America citizen who just wants our country back. **Your dollars are all I have to keep APC strong and effective. Please give what you can.**

To believe that all is doomed is to say our ideas – the ideas of Jefferson, Washington, Franklin, and Madison – aren't strong enough to stand up against the delusional ravings of Marx, Lenin, Hitler, and the tyrants at the UN!

Steven, help me keep APC strong and we will win!

World Domination

cont. from page 1

generations.

The Southern Poverty Law Center has issued four separate reports on me. I've been attacked on the front page of the Sunday New York Times. Atlantic Magazine scoffed that we Anti-Agenda 21 nuts declared that the UN was using "bike paths to achieve world domination." And Newsweek called us Extremists who are spreading untruths about Agenda 21 to discredit the UN by claiming it is a attempting to enforce a New World Order to "seize private property and advance the causes of communism and to crush all dissent." And on and on the charges have gone.

The funny thing about those charges is that all I have ever done is quote the proponents of Agenda 21 and its policy of Sustainable Development. It started with Agenda 21, then we got a remake called Agenda 2030, followed by the Green New Deal, and most recently the Great Reset. In every case, proponents assure us it's all just a progressive (and voluntary) drive toward a better life for everyone.

Well, is it? I have an idea! Why don't I let them tell us in their own words – you know – the ones I've been quoting for the past thirty years. Then you can decide for yourselves – conspiracy theory – or threat to all human society?

IN THEIR OWN WORDS – NOT MINE!

Comprehensive Blue Print for the Reorganization of Human Society

"The common enemy of humanity is man. In searching for a new enemy to unite us, we came up with the idea that pollution, the threat of global warming, water shortages, famine and the like would fit the bill. All of these dangers are caused by human intervention, and it is only through changed attitudes and behavior that they can be over come. The real enemy then, is humanity itself." Club of Rome

"Effective execution of Agenda 21 will require a profound reorientation of all human society, unlike anything the world has ever experienced. A major shift in the priorities of both governments and individuals and an unprecedented redeployment of human and financial resources. This shift will demand that a concern for the environmental consequences of every human action be integrated into individual and collective decision-making at every level." United Nations on Agenda 21

"Current lifestyles and consumption patterns of the affluent middle class – involving high meat intake, use of fossil fuels, appliances, air-conditioning, and suburban housing – are not sustainable." Maurice Strong, Chairman UN Earth Summit 1992

"We must go through a wrenching transformation to rid us of the horrors of the Twentieth Century's Industrial Revolution." Al Gore, Earth in the Balance

Climate Change – Truth or Fiction – It Doesn't Matter

"We've got to ride this global warming issue. Even if the theory of global warming is wrong we will be doing the right thing in terms of economic and environmental policy."

Timothy Wirth (President, United Nations Foundation)

"No matter if the science of global warming is all phony…climate change provides the greatest opportunity to bring about justice and equality in the world."

Christine Stewart (Former Canadian Minister of the Environment)

"It doesn't matter what is true. It only matters what people believe is true."

Paul Watson (co-founder of Green Peace.)

"This is the first time in the history of mankind that we are setting ourselves the task of intentionally, within a defined period of time, to change the economic development model that has been reigning for at least 150 years, since the industrial revolution."

Christiana Figueres (Executive Secretary, UN Framework Convention on Climate Change)

Population Control – Get Rid of the Worthless Humans

"My three main goals would be to reduce human population to about 100 million world-wide, destroy the industrial infrastructure and see wilderness, with its full complement of species returning throughout the world…"

Dave Foreman (Co-founder of Earth First)

"The native ecosystems and the collective needs of non-human species must take precedence over the needs and desires of humans."

Reed Noss, (A Creator of the Wildlands Project)

"Human beings, as a species have no more value than slugs."

John Davis (Editor of Earth First Journal).

"Among environmentalists sharing two or three beers, the notion is quite common that, if only some calamity could wipe out the human race, other species might once again have a chance." Richard Conniff (Audubon Magazine)

"If I were reincarnated I would wish to return to Earth as a killer virus to lower human population levels." Prince Phillip (World Wildlife Fund)

"Childbearing should be a punishable crime against society, unless the parents hold a government license. All potential parents should be required to use contraceptive chemicals, the government issuing antidotes to citizens chosen for childbearing."

David Brower, Sierra Club

Sustainable = Globalism

"All countries and all stakeholders, acting in collaborative partnership, will implement this plan… We are determined to take the bold and transformative steps which are urgently needed to shift the world onto a sustainable and resilient path. As we embark on this collective journey, we pledge that no one will be left behind."

Preamble to Agenda 2030

"The emerging 'environmentalization' of our civilization and the need for vigorous action in the interest of the entire global community will inevitably have multiple political consequences. Perhaps the most important of them will be a gradual change in the status of the United Nations. Inevitably, it must assume some aspects of world government." Mikhail Gorbachev (address to the State of the World Forum)

"A massive campaign must be launched to de-develop the United States. De-Development means bringing our economic system into line with the realities of ecology and the world resource situation." Paul Ehrlich (Prof of Population Studies, Stanford U.)

Enforcing the Global Agenda Locally

"Regionalism must precede Globalism. We foresee a seamless system of governance from local communities, individual states, regional unions, and up through the United Nations itself." UN Commission on Global Governance

"No one fully understands how, or even if, sustainable development can be achieved. However, there is growing consensus that it must be accomplished at the local level if it is to be achieved on a global basis."

The Local Agenda 21 Planning Guide, published by ICLEA, 1996

"We believe planning should be a tool for allocating resources…and eliminating the great inequalities of wealth and power in our society…because the free market has proven incapable of doing this." Statement of Principles, Plannersnetwork.org, American Planning Association.

Resetting the Entire Economic System

"What then is the most effective transition strategy? The essential aim is not to fight against consumer-capitalist society, but to build the alternative to it."

Author Ted Trainer, Transition to a Sustainable and Just World.

"Simply shutting down the economy is not going to get us to our goal. So, just like we need innovation for COVID-19, we also need to get rid of emissions from all the different sectors and bring down climate change… This crosses many areas, transportation, industry, electricity, all those things, and agriculture – contribute to emissions…"

Bill Gates on the Covid lockdowns.

"Individual rights will have to take a back seat to the collective."

Harvey Ruvin (ICLEI)

"The right to full employment and ending unemployment by guaranteeing a job at a living wage in a safe workplace, empowered by labor unions; single-payer Medicare for all, tuition-free education from pre-school to college, and the right to affordable housing." The Economic Bill Of Rights – the Green New Deal

"Within a year, 77% of institutional investors intend to stop buying into companies that aren't, in some way, Sustainable. If it's not done by following Sustainable rules, it will not be financed." The Great Reset

"No industry or business will be spared from the impact of these challenges. Millions of companies risk disappearing and many industries face an uncertain future; a few will thrive." Klaus Schwab, Covnd-19: The

World leaders 'failed to listen'; Transportation heads warn of supply chains 'collapse'

By WorldTribune Staff, October 5,, 2021

World leaders were so consumed with lockdowns and travel bans amid the Covid pandemic that they failed to heed warnings that global supply chains were in jeopardy of collapsing, officials in the maritime, road, and aviation shipping industries said.

The world road transport organization (IRU), the International Air Transport Association (IATA), the International Chamber of Shipping (ICS), and the International Transport Workers' Federation (ITF), in a joint open letter on Sept. 29, said: "We are witnessing unprecedented disruptions and global delays and shortages on essential goods including electronics, food, fuel and medical supplies. Consumer demand is rising and the delays look set to worsen ahead of Christmas and continue into 2022."

The transportation industry leaders asked the UN, the World Health Organization and anyone else who cared to listen that it was vital for them to intervene to prevent a "global transport systems collapse."

"Since the outset of the Covid-19 pandemic, the maritime, road and aviation industries have called loudly and clearly on governments to ensure the free movement of transport workers and to end travel bans and other restrictions that have had an enormously detrimental impact on their wellbeing and safety," the joint letter said. "Transport workers keep the world running and are vital for the free movement of products, including vaccines and PPE, but have been continually failed by governments and taken for granted by their officials."

The letter referred to ships stuck at sea waiting to be unloaded.

In the U.S., reports noted that 70 container ships were anchored near the Port of Long Beach in California. Some have been anchored for up to 45 days waiting to unload.

The transportation industries "have all continued to keep global trade flowing throughout the pandemic, but it has taken a human toll," the joint letter said. "At the peak of the crew change crisis 400,000 seafarers were unable to leave their ships, with some seafarers working for as long as 18 months over their initial contracts. Flights have been restricted and aviation workers have faced the inconsistency of border, travel, restrictions, and vaccine restrictions/requirements. Additional and systemic stopping at road borders has meant truck drivers have been forced to wait, sometimes weeks, before being able to complete their journeys and return home."

The joint letter continued: "It is of great concern that we are also seeing shortages of workers and expect more to leave our industries as a result of the poor treatment they have faced during the pandemic, putting the supply chain under greater threat."

World Domination

cont. from page 18

Great Reset

"The chaotic growth of cites will be replaced by a dynamic system of urban settlement…The region is formed by the economic interdependence of its development… The region has a single system of transportation, a centralized administration, and a united system of education and research."

Soviet Russian architect Alexei Gutnov. The Ideal Communist City. 1968

Well, there you have it. Now what do think they really want? Am I the nut for simply telling on them? There are tons more quotes I could use, but it would just be over-kill.

Our nation is in chaos,

- with our economy locked down,
- the ability to own and control our own property is disappearing,
- the public schools are becoming factories turning out compliant global village idiots,
- the national debt is soaring,
- gas prices are skyrocketing,
- the nation's health care system is being destroyed,
- Christianity is being assaulted,
- and the growing threat of a total surveillance society is watching our every move.

Do you see any connection to the above quotes and these current realities taking place across the globe?

It's interesting to note that Klaus Schwab, head of the World Economic Forum, issued his book titled Covid 19; The Great Reset, claiming it is based on what has been learned during the Covid lockdown. Yet the book was published in August, 2020, just five months into the lockdown. The purpose of the book, claims Schwab, is to take what we learned during the lockdown to guide us on how to govern in this new, dangerous era. The book clearly hints that the pandemic is a result of man-made climate change, and we will suffer endless pandemics unless we reorder society – exactly the same message of Agenda 21.

Considering that an idea for a book takes time to conceive, research, write and then publish – to do it all within five months from the beginning of the pandemic, is either super human — or the Covid experience and its Great Reset were all planned way in advance. Add to that the fact that Dr. Fuchi said in 2017 that Donald Trump was definitely going to face a surprise pandemic – well you get the picture.

Let me finish with one more quote. This one is from my friend and powerful warrior against Agenda 21, the late Rosa Koire. "UN Agenda 21/Sustainable Development is the action plan to inventory and control all land, all water, all minerals, all plants, all animals, all construction, all means of production, all information, all energy, and all human beings in the world. INVENTORY AND CONTROL!"

That's what we are truly facing. That is what every one of these quotes is advocating – regulation of every aspect of our lives to enforce their agenda to inventory and control everything on earth. Their words – not mine!

Either we stand up to stop it, or suffer the consequences. I rest my case!

Environmental Destruction

continued from page 4

Argentina for centuries must contend with miners for access to communal land and water. The mining industry depends on a large amount of groundwater in one of the driest desert regions in the world to pump out brines from drilled wells. Some estimates show that approximately 1.9 million liters of water are needed to produce a tonne of lithium. In Chile's Salar de Atacama, lithium and other mining activities consumed 65 percent of the region's water. That is having a big impact on local farmers - who grow quinoa and herd llamas - in an area where some communities already must get water driven in from elsewhere.'"

So less-developed countries are mining for these materials in jurisdictions with virtually non-existent environmental regulations to help wealthy nations "decarbonize" and move to an all-electric society. This lack of oversight inflicts humanitarian atrocities and environmental degradation to the local landscape beyond comprehension. Whatever emission reductions the U.S., Canadian, European Union, and other governments believe they are achieving by using solar panels and wind turbines for electricity is entirely negated by the heavy reliance of the third world, vulnerable populations on coal-fired power.

And we, in the healthier and wealthier countries, have no right to insist that poor countries limit their use of fossil fuels. As our own experience proves, cheap, reliable, accessible power, and products from fossil fuels are lifesaving, and one of the best ways out of poverty. The poorer and less healthy countries, such as China, India, and those in Africa, are desperate for reliable energy and electricity for billions of residents. Until energy technologies such as solar, wind, and hydrogen can meet the five electricity standards of being abundant, affordable, reliable, scalable, and flexible, they are nothing more than niche forms of intermittent electricity. Under current technological constraints, they are nowhere near meeting the five standards of reliable electricity.

Stein and Royal's book also shows something we should be very glad to see: there is a worldwide abundance of fossil fuels in virtually every country. However, such is not the case with the minerals and metals for a "green" society which are mostly limited to environmentally negligent human rights abusers such as China, Russia, the Congo, and the lithium triangle in South America. Yet, none of the world's prominent politicians, environmental groups, or billionaires thriving off the backs of enslaved children have condemned less-developed countries for their labor practices or their degradation of landscapes from mining for these minerals and metals to support the "green movement." It's about time they did.

Under the anti-fossil fuel electrification plans of Joe Biden, and indeed most western leaders, we would need to mothball most of the huge energy demands of our economies. Western climate plans put a major focus on electrifying everything powered by weather-dependent renewables and banning gas-powered vehicles, which means a crushing change for our lifestyles and economies.

To truly phase out hydrocarbons such as oil, gas, and coal, we would also have to end our use of the many products that make our modern societies prosperous and healthy - things such as vaccines, iPhones, and all products based on plastics, so that we can feel good about our electric cars supposedly saving the planet. Meanwhile, global minorities suffer and die, and local environments are ruined, to produce the raw materials for our virtue-signaling fantasies.

Climate change activists and their allies in government and the press apparently do not understand another crucial fact about wind and solar power: there are not enough "green" exotic minerals and metals to achieve their net-zero ambitions even if it was worth trying to do so. They should review the paper by Cambridge University Emeritus Professor of Technology Michael Kelly, which shows that replacing just the United Kingdom's 32 million light-duty vehicles (of the 1.42 billion cars in operation worldwide) with next-generation EVs would require incredibly vast quantities of materials such as lithium, cobalt, copper, and neodymium.

And finally, with Communist China dominating so much of the supply chain required to produce "clean" energy, every single EV battery, windmill, and solar panel is money for China. General Secretary Xi Jinping must be thrilled with Biden's plans.

92 state legislators demand 50-state election audit and consequences

By WorldTribune.com 10/05/2021

A group of 92 state legislators are demanding audits for all 50 states for the 2020 election and for "each state to decertify its electors where it has been shown the elections were certified prematurely and inaccurately."

After the results of the audit of Maricopa County were publicized, Arizona state Sen. Wendy Rogers unveiled what she called the "new Declaration of Independence" in which state legislators across America called for Arizona-style audits for all 50 states.

The Arizona audit revealed how "our representative republic suffered a corrupted 2020 election," the legislators who signed on to Rogers' declaration said.

The forensic audit of Arizona's Maricopa County "revealed thousands of discrepancies and issues with EV32 and EV33 ballot forms, along with a number of other serious election integrity problems," National File's Jack Hadfield reported.

According to page 56 of the audit report entitled Maricopa County Forensic Election Audit: Volume III: Result Details, "all voters within the Final Voted File, or VM55, was cross-checked against a commercially available data source provided by Melissa called Personator and 86,391 individuals were found with no record in the database for either their name, or anyone with the same last name at the address in the VM55 file."

Joe Biden reportedly won Arizona by less that 11,000 votes.

Constitutional analysts have indicated that decertification would be sound legal recourse for a corrupted election after-the-fact.

"We are in uncharted territory, but there are a couple of things to point to," said constitutional lawyer John Eastman. "We can point to the Hawaii Election of 1960, when the Governor subsequently certified another slate of electors after they discovered error in the initial certification."

"We can point to Section 2 of Title 3 of the United States Code that says when a state has had an election, and has failed to make a choice on the day prescribed by law, which is, you know, the choice that was made. The assumption was that it was fraudulently given because of illegal votes. The electors may be appointed on a subsequent day in such manner as the legislature of such state may direct," Eastman continued. "So that recognizes the authority of the Legislature to fix a problem."

"We also have a backdrop of Common Law, which is, when you have a fraud, the actions taken pursuant to the fraud, are unraveled after discovery of the fraud. If the evidence really does come in as definitive, that the election and the electorals cast from Arizona were fraudulently given, and they should have been given in the other direction, then I think there is ample authority to fix this problem," Eastman said. "We don't have to live with a fraudulent election."

Text of the legislators' letter:

MEMORANDUM FOR RECORD October 4th, 2021

Subject: Letter from State Legislators to the American People Reference the 2020 Election

To the citizens of the United States of America,

We the undersigned state legislators of the United States are vested with the plenary power by our US Constitution (Article 2 Section 1 Clause 2) to oversee the election of the president of the United States.

It has come to our attention from an audit of 2.1 million ballots in Arizona complemented by an in-depth canvass of votes in Arizona, as well as through multiple different data reviews of voting by independent experts; that our representative republic suffered a corrupted 2020 election.

In addition to Arizona, sworn affidavits have accumulated from many states detailing rampant corruption and mismanagement in the election process. Fraud and inaccuracies have already been shown through multiple audits and canvasses in multiple states, as well as through lawsuits challenging the validity of election results in several counties in multiple states.

We have come to the conclusion that all 50 states need to be forensically audited. Voter rolls should be scrubbed with a canvass of the voters to ensure future integrity of our elections.

If results from these measures prove an inaccurate election was held, as has been shown in Arizona, and is being shown in many other states; then it is clear that certification of many electors was improperly rendered in January 2021 of the November 2020 United States presidential election.

We call on each state to decertify its electors where it has been shown the elections were certified prematurely and inaccurately.

If it is shown that either Joe Biden would receive fewer than 270 tallied electoral votes, or Donald Trump would receive more than 270 electoral votes, then we call for the US House of Representatives to convene and vote per the US Constitution by means of one vote per state to decide the rightful winner of the election in accordance with the constitutional process of choosing electors.

This is our historic obligation to restore the election integrity of the vote as the bedrock of our constitutional republic.

If we do not have accurate and fair elections, we do not have a country.

U.S. - Unite or Divide?

cont. from page 1

politics.

It's time to ask the question, can the U.S. unite? If not, how does it divide? What do the people say, after all, it is their country?

• Pew Research Center finds only about 25% of Americans believe they can trust the government in Washington to the what is right "just about 2% of the time and 22% most of the time. Trust in government is down from 75% in 1958.

• Gallup finds only 12% of Americans have a "great deal" or "quite a lot" of confidence in Congress.

• Rasmussen finds 59% of likely voters believe members of Congress care more about what the media thinks is more important than what the voters think.

• Gallup finds only 20% of Americans have a "great deal" or "quite a lot" of confidence in the criminal justice system.

• Gallup finds only 21% of Americans have a "great deal" or "quite a lot" of confidence in newspapers.

• Rasmussen finds 58% of voters agree media is the "Enemy of the People."

• A survey by the Reuters Institute for the Study of Journalism found the U.S. ranks last of 46 nations in media trust, at 29% trust.

• A Gallup Poll finds 84% of Americans believe media is to blame for our political divide.

• A Public Agenda/USA Today/Ipsos poll found 90% of Americans "…are sick and tired of being so divided."

• Gallup finds only 37% of Americans have a "great deal" or "quite a lot" of confidence in religious institutions.

• Only 37% of likely voters think the country is heading in the right direction.

Whatever trust the American people have in their institutions it is in the military, 73%; small business, 68%; and the police 53%, notwithstanding the absurd "defund the police" movement.

The fifty states are almost equally divided on every policy issue by political camp, "Red," or "Blue."

Even within states, the conservative parts of Oregon want to join Idaho, and parts of northern California want to separate from the rest of California and form its own state.

Pew Research Center finds two-thirds of Americans are "worn out" by the amount of political news.

The Georgetown University Civility Survey found while 80% of voters want both parties to find "compromise and common ground;" yet 67% believe the U.S. is two-thirds of the way to the edge of a civil war. Voters across all demographics believe "…political, racial and class divisions are getting worse."

What are these polls telling us?

A June 13, 2021 poll by the bipartisan Georgetown University Institute of Politics and Public Service found "… voters now rate 'division in the country as the most important issue." Voters believe the level of division is alarmingly high and will get worse in the future. These voters want compromise, at least on the issues of spending and infrastructure; but on social issues, such as abortion and voting rights, voters, both Republicans, and Democrats, want members of Congress to fight for their principles.

The most interesting part of the poll, however, is the finding that there is "a strong correlation between where people get information and how they view key issues and figures." For example, Fox News viewers have a favorable/unfavorable rating of 17/78 on Black Lives Matter. Non-Fox viewers, however, have a 59/35 favorable/unfavorable rating. Dr. Anthony Fauci has a favorable/unfavorable rating of 20/69 among Fox viewers and a 64/27 favorable/unfavorable rating among non-Fox viewers.

The American people are smart, they want the government to work on matters impacting their day-to-day lives but are willing to accept conflict on non-bread-and-butter issues. Unfortunately, due to the influence of the media on government and the obsession of government officials to be the "darlings" of the media, government is dysfunctional because politicians and the media have agendas that conflict with the American people.

Simply, the federal government is now separate from its citizens. Government is the ruler and citizens are the servants. Media is the government's tool to maintain confusion within the electorate so they cannot unite. Being unable to unite, the nation remains polarized and will remain polarized until elected officials begin functioning as fiduciaries to the Constitution and the institution of government in which they serve. Only when the system works for the people, will the people have trust in it.

Part II of this series describes how difficult it is for states to protect their citizens from the federal government. When a State joins the United States, it checks in under the rules of the Hotel California; States can check out anytime they like, but they can never leave. No matter how bad it gets!

DEAR READERS...

I received this cloaked message from someone who apparently saw the publication for the first time. As you know, we present all ideas consistent with our mission. I wish this person would've submitted a piece related to his/her issue so we could publish it Here's their message (right):

Sept. 10, 2021

Dear Editors of *The Reality News*,

I received one of your little newspapers yesterday. I will not be subscribing to your paper.

You are too liberal. You have bowed to the false teachings of science. On your cover page is a drawing of the earth. Instead of a flat surface, your illustration shows the earth as a sphere.

Sincerely,

A Real Conservative

"If you can get people to not believe the news, you can do anything."

TO THE LIAR IN CHIEF...

To the Liar in chief who occupies our White House in Washington, D.C.

It is a sad day for our Nation when the highest office in our land is occupied by a pathalogical crook who has lied and cheated all through his government tenure (tenure). Joe Biden has been the head of a criminal family for decades. He and his corrupt family have enriched themselves with millions of dollars from taxpayers and foreign countries. Joe Biden is the most corrupt president ever to hold that office.

Our nation weeps at the thought of such a Scheming Scoundrel in the office of President. Of course he only got there due to massive Voter Fraud (Fraud). That is the way he operates.

Joe seems to be at the head of the DDD's or the Triple D's (Damn, Dumb Democrats) but he is a senile old man. A puppet handled by Obama and others.

Such is the fix we are in. At age 85 I can't do what I once could do. I served 3 years in the USMC with one of those years in South Korea (during the Truce).

We need to keep up the fight against you.

One Nation Under God

BREAKING: Abp. Viganò asks Catholics to take cancelled priests into their own homes

In a new letter, the former Papal Nuncio to the United States condemned vaccine mandates for priests and called upon the faithful for assistance.

Sun Oct 3, 2021 - 2:30 pm EDT

ROME, Italy (LifeSiteNews) — Archbishop Carlo Maria Viganò has asked Catholics to support cancelled priests by taking them into their own homes.

In a new letter, released Sunday, the archbishop suggested the deeply personal measure as a way to ensure that the priests are able to say Mass for the faithful and that the faithful receive their "spiritual assistance."

"The Catholic faithful [should] open their homes to priests persecuted by the tyranny of the bishops allied to globalism, making them available for the celebration of the Holy Sacrifice of the Mass," Viganò wrote.

"Gathered around these domestic altars, the refractory communities will thus be able to continue to render due worship to the Holy Trinity and to benefit from the spiritual assistance of their ministers." (Full letter reproduced below.)

The former Papal Nuncio to the United States did not mince words as he conveyed his dismay that Catholic priests in American dioceses are being forced to choose between not taking COVID-19 jabs and their vocations as priests. Archbishop Viganò, known for his strong and forthright pronouncements, called such mandates and penalties for priests "sacrilegious and illegitimate." He also bluntly criticized Pope Francis for his role in promoting the COVID-19 inoculations, saying that it was an "unprecedented betrayal."

"The subservience of the Bergoglian Hierarchy to the pandemic farce and the imposition of the so-called vaccination has transformed the Ministers of God into pandemic gurus, the Bishops into salesmen of experimental serum and the entire ecclesial body into the victim of mass experimentation," Viganò stated.

"This constitutes an unprecedented betrayal of the divine mission of the Church of Christ, of the power of pastors and of the mandate of priests, in a process of replacing the revealed religion with a pseudoscientific cult that borders on idolatry," he continued.

"If these abuses are already serious [when] they come from the civil authority – whose corruption and conflicts of interest are now universally known and denounced – even more serious is the cooperation in this global crime by the ecclesiastical authority."

In his letter, Viganò singled out the Archdiocese of Chicago for particular mention, as priests there are under strong pressure by their Ordinary, Cardinal Blase Cupich, to receive the vaccine by tomorrow.

"Priests who do not comply with the provisions of the Ordinary will be deprived of their priestly faculties and means of subsistence. Consequently, many churches will be closed, with very serious damage to the salus animarum, due to the lack of clerics who can replace those who will not be injected with the experimental gene serum," Archbishop Viganò wrote.

Viganò renewed his request to American Catholics to support good priests who run afoul of their bishops. He believes it is necessary to set up an international foundation to which Catholics can donate, diverting money away from "parishes and dioceses that are conniving with the current Bergoglian regime." He believes that the loss of funds will make bishops more reluctant to ostracize good, orthodox priests.

Meanwhile, he encouraged Catholics to support their persecuted priests by taking them into their own homes, praying that "fraternal charity, nourished by the sharing of the one Faith and prayer, mark the beginning of a rebirth of the Holy Church, today obscured by mercenaries and traitors."

LETTER ABOUT THE RECENT IMPOSITION OF THE MANDATORY VACCINATION IN SOME AMERICAN DIOCESES

We have all learned that in some Dioceses of the United States of America, and in particular in the Archdiocese of Chicago, the Ecclesiastical Authority is mandating its clerics and faithful employees to be vaccinated as a condition for attending celebrations, liturgical activities, and pastoral [work] and even for the mere fact of being priests with a ministry. Similar despotic measures are also imposed in Italy and other countries.

Priests who do not comply with the provisions of the Ordinary will be deprived of their priestly faculties and means of subsistence. Consequently, many churches will be closed, with very serious damage to the salus animarum, due to the lack of clerics who can replace those who will not be injected with the experimental gene serum. From what is known, there are not a few pastors of souls who will oppose, as is in their full right as American citizens and Catholics, a clear refusal to sacrilegious and illegitimate provisions, which are void and which expose those concerned to the concrete immediate dangerous serious side effects, including the risk of death. Without mentioning the moral implications of accepting the inoculation of a drug for the production of which fetal cell lines from abortions are used.

The subservience of the Bergoglian Hierarchy to the pandemic farce and the imposition of the so-called vaccination has transformed the Ministers of God into pandemic gurus, the Bishops into salesmen of experimental serum and the entire ecclesial body into the victim of mass experimentation. This constitutes an unprecedented betrayal of the divine mission of the Church of Christ, of the power of pastors and of the mandate of priests, in a process of replacing the revealed religion with a pseudoscientific cult that borders on idolatry. If these abuses are already serious if they come from the civil authority – whose corruption and conflicts of interest are now universally known and denounced – even more serious is the cooperation in this global crime by the ecclesiastical authority.

Virginia will allow at-home abortions as state looks to make abortion a right

By Nancy Flanders,Sept. 27, 2021

Beginning in October, Virginia will allow women to undergo dangerous at-home abortions using telehealth visits with abortionists.

According to Virginia Mercury, Planned Parenthood South Atlantic and the Virginia League of Planned Parenthood, which operate six abortion businesses in the state, announced that they will be offering chemical abortions through the mail after a virtual visit. No woman will be required to undergo an exam or counseling prior to receiving the abortion pill.

Though there is a screening process in place to rule out possible conditions that could put women at higher risk of complications, lack of a physical exam means that women are being put at risk in the name of abortion expansion. For decades, the FDA has held a rule that women must be seen in person prior to taking the abortion pill, and that they must take the first pill of the regimen in an approved clinic. Due to the COVID-19 pandemic, that rule has been temporarily suspended. Now, the Biden administration is looking to end it permanently. This would be detrimental to women, though the world would likely never hear about their complications. Only half of all states report abortion complications and when women take the abortion pill at home, and emergency rooms are dealing with most of the aftermath.

VOICE OF JERUSALEM

What is the "Two-State Solution" About?

By Caroline Glick

Last week, after the House of Representatives overwhelmingly approved the supplemental spending bill for the Iron Dome program, everyone from House Speaker Nancy Pelosi to the Biden White House, to Prime Minister Naftali Bennett and Foreign Minister Yair Lapid, quickly proclaimed bipartisan support in Washington for the US-Israel alliance is as strong as it ever was. Unfortunately, even before the bill passed, it was clear that the opposite was the case.

Eight House members from the leftist edge of the political spectrum voted against the Iron Dome funding and two of their comrades voted "present."

The only reason the measure was brought to a vote last week was because days earlier, the same House members blocked supplemental funding for the Iron Dome program from being included on an omnibus continuous spending resolution. By first scuttling and then opposing the funding of a joint Israeli-US system that is entirely defensive and works only to prevent the wanton murder of Israeli civilians by indiscriminate missile attacks, the lawmakers were saying that they supported the Palestinians in their terror war against Israel. Reps. Marie Newman, Andre Carson, Hank Johnson, Cori Bush, Alexandria Ocasio-Cortez, Rashida Tlaib, Ilhan Omar, Jesus Garcia, Raul Grijalva, Ayanna Presley and their Republican comrade Thomas Massey opposed the Iron Dome funding package because they support the terror war that Hamas, Fatah, Islamic Jihad and their brethren in Hezbollah wage against the people of Israel. They don't want to fund Iron Dome because they want Israel to lose to the terrorists.

But for all the drama that the Squad members produced around the Iron Dome bill, their stunt was a sideshow. The main anti-Israel/pro-Palestinian terrorism action was taking place elsewhere.

A few hours before the House voted on the supplemental Iron Dome funding, Rep. Andy Levin, a progressive Jewish lawmaker from Michigan who voted in favor of the supplemental Iron Dome funding, submitted his own bill that related to the Palestinians and Israel. And Levin's bill is far more dangerous to Israel and to US-Israel relations than his fellow progressive lawmakers' nay vote on the Iron Dome.

The main purpose of Levin's bill, which is co-sponsored by 24 other members, (seven of whom are also Jewish), is to support the Palestinian terror against Israel, while adopting a laundry list of anti-Israel policies along the way.

Levin's bill includes an amendment to the Anti-Terrorism Act of 1987 that defines the PLO as a terrorist organization and bars the US from permitting the PLO to open offices in the US or from receiving assistance from the US so long as the PLO and its member organizations remain engaged in terrorism. Levin's bill would amend the law to provide the administration with the authority to permit the opening of a PLO office in Washington and to transfer funds to the PLO/Palestinian Authority even while the PLO and its member groups remain engaged in terrorism. Levin's bill enables the administration to sidestep the law simply by proclaiming that opening a PLO office in Washington and funding the PLO/PA is necessary to advance "diplomacy."

Whereas the 2018 Taylor Force Act bars the US from funding the PA so long as it pays salaries to terrorists and their families, Levin's bill would enable the administration to transfer funds directly to the PA even if it continues to pay salaries to terrorists and their families. Levin's bill empowers the secretary of state to authorize such funding simply by proclaiming that the PA is "reforming" its payment apparatus. As Palestinian Media Watch reported this week, the PA already believes that US funding will be restored despite the fact that nearly 10% of the PA budget goes towards paying salaries to terrorists and their families. A senior PA official said that reinstating US funding "is merely a problem of semantics." Levin's bill provides the semantic trick to restore funding.

Alongside its direct support for Palestinian terrorism, Levin's bill also includes multiple provisions whose purpose is to undermine and weaken Israel while subverting the US-Israel alliance. The Levin bill bars Israel from using weapons it receives from the US to defend itself in Judea, Samaria, Gaza and unified Jerusalem. It also discriminates against Israel in a manner that legitimizes the anti-Semitic Boycott, Sanctions and Divestment (BDS) campaign against the Jewish state. The Levin bill bars Israel from marking goods from Judea, Samaria and Gaza, "Made in Israel," instead, Israel is required to mark all such goods as made in the "West Bank/Gaza." Israel's scientific, agricultural and other cooperative agreements with the US will only apply to areas that Israel controlled in 1949. Israeli institutions and citizens beyond those areas will be boycotted.

Levin's bill requires the administration to cancel former Secretary of State Mike Pompeo's 2019 determination that Israeli communities in Judea and Samaria are not illegal and delineate all Israeli communities in Judea and Samaria as illegal. Israeli neighborhoods built in Jerusalem since 1967 are also deemed illegal, as are Israeli actions to enforce building laws on illegal Palestinian construction in Judea, Samaria and Jerusalem.

Arguably, the most significant aspect of Levin's pro-Palestinian terror bill is the name he gave it. Levin named his would-be federal law, "The Two-State Solution Act."

Levin's decision to use that expression to market his Palestinian terror supporting, Israel subverting bill tells us two important things. First, it shows us what progressives are really talking about when they declare their support for a "two-state solution."

Levin's bill doesn't mention the "peace process." terms Israel must abide by to receive future American support. The Levin bill only mentions Israeli-Palestinian peace twice in passing references to "peaceful relations" between Israel and the Palestinian state that Levin insists must be established.

The bill doesn't determine that the Palestinians and Israel must resolve their conflict through negotiations. Whether peace talks are reinstated or not is completely irrelevant to Levin and his co-sponsors. Instead, Levin's bill sets out the means the US must use to coerce Israel into surrendering to the Palestinian terror war.

Since the whole purpose of the bill is to enable the US to empower the PLO and the PA while they support, fund, carry out and glorify terror attacks against Israel, it goes without saying that Levin and his co-sponsors are fine, indeed they seek to reward the Palestinians for their terrorist war against Israel.

So when progressive Democrat lawmakers like Levin and his 24 co-sponsors express support for "the two-state solution," they aren't saying they want a peaceful resolution of the Palestinian conflict with Israel. For them, "the two-state solution" is a code for supporting the Palestinian terror war against Israel.

This brings us to Levin's "Two-State Solution Act's" second lesson. When Israelis and Israel supporters proclaim their support for "the two-state solution," they have a certain theoretical picture in their mind. As they see things, a "two state solution" is a way to peacefully resolve the Palestinian conflict with Israel. Under the "two-state solution," Israel will withdraw from large swathes of Judea and Samaria – but usually not from the entire area since significant portions of Judea and Samaria are either vital for the physical survival of Israel, or contain large Israeli population centers that most two-state solution supporters consider integral parts of the State of Israel.

As for Jerusalem, supporters of the theoretical two-state solution believe that in a final peace settlement, Israel would provide symbolic concessions in Jerusalem, like the transfer of sovereignty over Abu Dis, a Palestinian village within the municipal boundaries of Jerusalem but outside the security perimeter of the city. But beyond that, Israel's capital for the past 3,000 years would remain its capital.

This theoretical concept of a two-state solution is founded on the notion that when the Palestinian state is established in the areas Israel withdraws from, that state will be at peace with Israel. It will have signed a formal peace treaty with the Jewish state in which it formally recognizes the Jewish state's right to exist.

The problem with this theoretical concept is that the Palestinians oppose it. For the past hundred years, the Palestinians have rejected any concept of a two-state solution that isn't simply a means to advance their unchanging goal of eliminating the Jewish state. And they still oppose it.

Last week, the veteran Palestinian pollster Khalil Shikaki released a new survey of Palestinian public opinion which showed that 62% of Palestinians oppose "the two-state solution," even though, by failing to define the term, Shikaki let his respondents define a "two-state solution" anyway they wanted.

On the other hand, 54% support "armed resistance" – that is, terrorism – against Israel.

Since the 1920s, the Palestinians have stated and demonstrated through their actions that for them, the point of establishing a Palestinian state in Jerusalem, Judea and Samaria, (along with Gaza) is both to ethnically cleanse these areas of all Jewish presence, and as they have done in Gaza for the past 16 years, use them as forward bases for continued war against the rest of Israel. The operational collaboration between of Arab Israeli rioters and pogromists and the PA and Hamas in the last round of fighting in May was no coincidence. From the perspective of Hamas and the PLO/PA, Israeli Arabs are full partners in the war that will only end when Israel ceases to exist. For the Palestinians, in short, "the two-state solution" is not a means to achieve either peace or Palestinian statehood. It is a means to advance to the next phase of the war to annihilate Israel. Shikaki's poll showed that today the Palestinians' view of the situation is no different than it was in 1920 or 1947 or 1967 or 1993.

The time has come to recognize and act on the significance of these facts. The vast majority of Democrats who voted to fund Iron dome didn't prove that bipartisan support for Israel is as strong as ever. They proved that most Democrats are unwilling to publicly support Palestinian terrorism against Israel. And that is where Levin's bill comes in. Its purpose isn't to advance the Israeli vision of a two-state solution. It is to give Levin and his colleagues a fig leaf to hide behind as they advance the Palestinian version of the two-state solution. That is why the bill legalizes US support for Palestinian terrorists and undermines Israel's security and its ties to the United States.

It is Israel's responsibility, and the responsibility of its supporters in the US, to expose the truth. For the Palestinians and a growing number of their progressive supporters, "the two-state solution" is not a means to achieve peace. Rather, it is simply a euphemism for supporting the Palestinian terror war. Israelis and pro-Israel Americans need to understand that in today's political climate, when Palestinians and their progressive supporters embrace the "two-state solution," they are not seeking to advance prospects for peaceful coexistence between Israel and the Palestinians. They are supporting Palestinian terrorism and advocating Israel's demise.

Cancelled Priests

cont. from page 22

Faced with such violations of the law, it is necessary to denounce without hesitation the deliberate complicity of the Hierarchy in the diabolical globalist plan of the Great Reset, and to resist firmly and courageously this oppression ratified by the Holy See.

I strongly renew the appeal that I launched at the recent event held in Dubuque (Iowa) in favor of Coalition of Canceled Priests, inviting the laity to support their priests with coordinated initiatives. It is necessary to set up an International Foundation that collects donations and contributions from the faithful, distracting them from parishes and dioceses that are conniving with the current Bergoglian regime. When the Bishops find themselves impacted in the bank account, they will probably be induced to moderate their work of ostracizing the good priests. Initiatives such as Coalition for Canceled Priests and other similar projects are an urgent need in this hour of persecution. Each of us, according to their means, will be able to make a concrete contribution – not necessarily only financial – even simply by allocating our offers to those who deserve them and not to those who use them to harass good clerics.

The Catholic faithful open their homes to priests persecuted by the tyranny of the bishops allied to globalism, making them available for the celebration of the Holy Sacrifice of the Mass. Gathered around these domestic altars, the refractory communities will thus be able to continue to render due worship to the Holy Trinity and to benefit from the spiritual assistance of their ministers. And may fraternal charity, nourished by the sharing of the one Faith and prayer, mark the beginning of a rebirth of the Holy Church, today obscured by mercenaries and traitors.

Turning Point Faith

This all-new initiative is dedicated to emboldening the faith community to be civically engaged like never before, by empowering pastors and equipping their congregations to take action!

With Turning Point Faith's NEW national boots-on-the-ground faith team, NEW faith-based action materials, NEW faith events, all NEW faith radio, AND SO MUCH MORE, Turning Point Faith is strengthening America's faith community to stand up against every attack and fight for our God-given liberties that made America the world's beacon of hope!

BREAKING: Anti-lockdown pro-life Catholic becomes premier of Australian state

By LifeSite News

SYDNEY, Australia — On Tuesday morning, 39-year-old conservative Catholic Dominic Perrottet was elected the 46th Premier of New South Wales in a 39-5 landslide.

This followed the shock resignation of Gladys Berejiklian amid corruption investigation, signalling the dawn of a new era in Australian politics.

During his first speech as the 46th Premier of New South Wales, Perrottet stated: "Today begins a new chapter for NSW and one that we will all write together. I am honoured that my colleagues have asked me to write that chapter as Premier, and I thank them for the confidence that they have put in me."

After acknowledging the contributions of the recently resigned former NSW Premier, Gladys Berejiklian, Perrottet added, "Being Premier is a great honour, but I want to be clear that the job I have committed to today is not just to lead NSW, but to serve all the people of our state."

"For the past 18 months together, we have been battling a storm that is COVID-19," he continued.

"Some have lost their lives. Many have lost their livelihoods. So many sacrifices, big and small, have been made by so many for so long. Not being able to leave our homes, not being able to go to work, not being able to visit our loved ones, parents having to work and balance homeschool at the same time, many have missed weddings, many have missed funerals and the opportunity to say goodbye to their loved ones."

Joan of Eau Claire

continued from page 1

immediately recognized that this was unfair. Vaccinated students who show no COVID symptoms don't need to quarantine at all, and although she is unvaccinated, she had contracted the disease earlier this year and has natural immunity.

To her, it was fundamentally wrong for both the school and the Eau Claire City County Health Department to deny her two weeks of in-person schooling, so she decided to take a stand. She told her mother, Kita Busse, that she intended to reject the school's quarantine and attend classes in person the next day.

As a courtesy, Busse—who says she has always had a good relationship with her officials in her daughter's school system—called Eau Claire Memorial's principal last Wednesday night to inform him that Pixie would be coming to school the following morning.

After a few calls back from assistant principals and other school personnel, Busse double checked with Pixie to make sure that she really wanted to provoke such a potential firestorm.

"She was sure," Busse said. "She wanted to do this."

When Pixie arrived at school Thursday morning, her principal ushered her into an empty classroom and told her that she was to remain there for the entire school day. No one would be allowed in, and she would not be allowed to leave.

"If they couldn't quarantine her at home, they were going to do it at school," Busse explained. "I think they thought she would give up and go home, but they don't know Pixie."

She stayed in the classroom all day and, when Busse arrived to pick her up Thursday afternoon, was shocked to see four uniformed law enforcement officers at the school to serve her with a court order to quarantine at home.

"Mikaila Spiess is temporarily confined for purposes of quarantine," the order reads. "Guards may be posted in compliance with Wis. Stat. Ch. 252 and Wis. Admin. Code DH Ch. 145."

The health department, it seems, was far more terrified of Joan of Eau Claire escaping than the English were of Joan of Arc.

Pixie was ordered to appear in court Tuesday, but she tested negative for COVID on Sunday and, in large measure because she so bravely and so publicly stood up to her quarantine, a judge on Monday cancelled the hearing and allowed Pixie to return to school on Tuesday.

She stared down tinpot tyranny and won, and she now stands as a powerful symbol of the eternal strength of an engaged citizenry. When it stands against the excesses of its government—at every level—then that government stands in fear of its own excesses.

If the price of freedom is eternal vigilance, then a high school freshman just cashed a rather large check…with the rest of her state cosigning. She didn't pay, as Joan of Arc did, by being burned at the stake, but at an age when a child's greatest fear is not fitting in, Pixie willingly sacrificed her own social standing to stand up for everyone in Wisconsin who is simply done living in fear of their local health department autocrats.

Her civil disobedience was the spark; now our passion for ending the last vestiges of COVID tyranny must burn as hotly as hers.

Police: 15-year-old California boy killed by jab in Sonoma County's first pediatric Covid death

By WorldTribune.com, Oct. 6, 2021

Since the onset of the pandemic, Sonoma County in California has recorded zero pediatric Covid deaths.

At least one child, however, has died as a result of the Covid vaccine in Sonoma County, police say.

The Sonoma County Sheriff's Office is blaming Pfizer's experimental mRNA jab for causing the sudden death of a Santa Rosa teen. The sheriff's office report shows a determination was made by a medical examiner that the 15–year-old, who was found dead in his bedroom two days after his second jab, suffered "stress cardiomyopathy" and "coronary artery inflammation."

Meanwhile, a woman in her late 30s from King County, Washington died from a rare blood-clotting syndrome after receiving the Johnson & Johnson vaccine, according to a statement by Public Health – Seattle & King County.

The woman, whose identity was not disclosed, received her vaccination on Aug. 6. After 11 days of getting the J&J jab, she died on Sept. 7 with thrombosis with thrombocytopenia syndrome (TTS).

The CDC verified that the woman died from the vaccine and confirmed the diagnosis.
